

# QUARTERLY RETURN

OF

## THE MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF

### ENGLAND.

By Authority of the Registrar General.

PUBLISHED BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 65.]

Marriages, Oct., Nov., Dec., 1864.

Births and Deaths, Jan., Feb., March, 1865.

[Price 4d.

General Register Office, Somerset House,  
29th April 1865.

THIS Return comprises the BIRTHS and DEATHS registered by 2200 Registrars in all the districts of England during the winter quarter that ended on March 31st, 1865; and the MARRIAGES in 12741 churches or chapels, about 5163 registered places of worship unconnected with the Established Church, and 641 Superintendent Registrars' offices, in the quarter that ended on December 31st, 1864.

The marriages in the fourth quarter of last year were numerous even for the Christmas season of the year. In the first quarter of the present year a birth-rate high above any example furnished by the previous ten years maintained the increase of population. The catalogue of deaths was also very heavy. A severe and protracted winter, with scarlatina and fever, swelled the mortuary returns. Under less favourable sanitary conditions the kingdom might have been ravaged by pestilence. And there is much still in our houses and towns to set in order.

#### MARRIAGES.

The number of weddings in the three months ending 31st December was 53,069, or on an average 577 daily. It was greater than in any previous quarter.

TABLE I.—Marriages, Births, and Deaths, returned in the Years 1855-65 and in the Quarters of those Years.

In London it rose from 7811 and 7856 in the corresponding quarter of the two previous years to 8693. The West Riding of Yorkshire, Durham, Northumberland, and South Wales also showed by a clear increase in their marriages that the times were prosperous with them.

In Lancashire the marriages which were 6499 in the last quarter of 1863 decreased to 6152 in that of 1864; but they were considerably more numerous than in the same period of 1862.

The total number of marriages in the year was 180,263, or on an average 493 daily. In the previous year it was 173,510.

The marriage-rate in the year (viz., proportion of persons married to 100 of the population,) was 1·736, and it was high throughout the year. The annual marriage-rate of the fourth quarter was 2·020, against an average rate of 1·963; in the ten years 1855-64 there is only one instance of a higher rate (2·026) which occurred in 1859.

#### BIRTHS.

In the three months that ended 31st March 194,287 children were born. The births in London were 28,059, a number almost equal to the total contribution of the two north-western counties, Cheshire and Lancashire. As with the marriages, so with the births, the increase was furnished chiefly by the metropolis, the West Riding of Yorkshire, Durham, Northumberland, and South Wales. The births in the West Riding increased as follows:—In the March quarter of 1863 they were 14,846; in that of 1864 they were 16,018, and in the present year 16,435. In Durham the numbers were 5931; 6394; 6707. In Northumberland 3275; 3402; 3474. In South Wales 6217; 6415; and 6685. In Sunderland the births in the three periods were 950, 1056, and 1101. In the March quarter of the present year 1924 children were born in the parish of Pancras, London; and in the district of Bradford in the West Riding, which contains a population almost as great, 2193 were born in the same time.

The birth-rate of the quarter (children born to 100 persons living) was 3·768 against an average of 3·627. The result is extraordinary. In the same period of

The Table may be read thus, without reference to the decimal points:—In the year 1855 to 100,000 of the population of England there were 1616 persons married, 3373 births, 2261 deaths registered. The annual rates of marriage in each of the four quarters were 1·262, 1·644, 1·570, and 1·976 per cent.; the rates of death 2·910, 2·272, 1·844, and 2·036 per cent. In reading the population on the first line add 3 ciphers (000). The three months January, February, March, contain 90, in leap year 91 days; the three months April, May, June, 91 days; each of the last 2 quarters of the year 92 days. For this inequality a correction has been made in the calculation.

last year it was 3·740 ; in that of 1860 it was 3·707 ; but the forty quarters of the last ten years supply only another instance in which the birth-rate was as high as 3·700 ; and none as high as that of the last quarter.

#### INCREASE OF POPULATION.

The births, as has been stated, were 194,287 ; and the deaths in the same period were 140,646. The excess of the former over the latter was 53,641, and represents the natural increase of the population.

But the population of the United Kingdom lost about 25,000 by emigration in the quarter that ended 31st March ; and of these about 8903 were persons of English origin. The total emigration (including foreigners) from British and Irish ports where there are Emigration officers was 27,513 persons\*, and showed a great decrease on that of the same quarter in 1863, which was 37,806, and a still greater as compared with the number last year, which was 41,037. The emigration to the United States was little more than half of that which took place in the March quarter of 1864.

Of 17,865 emigrants who went to the United States in the present year, about 3700 were English, 800 Scotch, and 11,000 Irish. The rest were foreigners.

#### PRICES, PAUPERISM, AND THE WEATHER.

The price of wheat, 38s. 4d. per quarter, was less by 2s. than in the first three months of last year, and less by 8s. 3d. than in the same period of 1863. Both beef and mutton were dear. The average price of the best potatoes at the water-

† From the Return of the Corn Department, Board of Trade.

‡ Deduced from the Weekly Tables published in the *Economist*. The average of the highest and of the lowest weekly prices is here shown in cols. 3, 4, and 5, and not the absolute highest or lowest price quoted at any period of the quarter.

§ Deduced from the Returns of the Poor Law Board. The returns now relate to 655 Unions, &c., comprising a population of 19,885,921 (in 1861), and do not include the paupers of parishes, &c. incorporated under Gilbert's Act, or still under the 43rd Elizabeth. Lunatic Paupers in Asylums and Vagrants relieved in the above Unions are also excluded, they amounted on January 1st, 1863, to—Insane Persons, 20,545 ; Vagrants, 4,234. The rest of the paupers on that day amounted to 1,003,198.

\* Return with which the Registrar General has been favoured by the Emigration Commissioners: Of 27,513 emigrants the origin was undistinguished in 751 cases which have been distributed by calculation.

side market, Southwark, was 91s. per ton. In the March quarter of 1863 it was 125s.; in that of 1864 it was 62s. 6d.

The following are the returns of paupers in the last three winter quarters :

				In-door.		Out-door.
				<hr/>		
1863	-	-	-	143,661	-	948,212
1864	-	-	-	139,606	-	855,728
1865	-	-	-	142,329	-	813,371

The numbers show a decrease in out-door pauperism.

Mr. Glaisher writes that January began with cold frosty weather ; a warm period set in on the 4th day and continued till the 16th, during which period, though the weather was mild, the sky was cloudy, and the wind blowing a gale. From the 17th January to the end of the quarter, with the exception of short intervals at the beginning and end of February, the weather was cold for the season, sometimes to an unpleasant degree. In a cold period in January the temperature of the air was as low as 20° at many places ; in February from 13° to 20° in many places, and as low as 8° at Birmingham ; and in March at the equinox it was as low as 23°. In January and February snowstorms were frequent, and extended all over England and Scotland. At the end of February the weather was extremely wild and stormy ; and March was cold and ungenial throughout. The mean temperature of January at Greenwich was 36·3° ; that of February and also that of March 36·6°, each being below the average of the corresponding periods in twenty-four years, and the mean temperature of March being as much as 5·4° below the average. Usually February is 2° and March 5° warmer than January ; but this year the increase was not obtained. To find a March equally cold it is necessary to go back to 1845, 1837, and 1814, when the mean temperature was above 35° and below 36°. In 1785 it was 33·9°. Towards the end of last century that month was oftener remarkable for extreme coldness than it has been in later times.

DEATHS ; AND THE STATE OF THE PUBLIC HEALTH.

In the last quarter the total number of deaths was 140,646, being less than in the same period of 1864, when it was barely 143,000, and much greater than in that of 1863, when it was 129,000. In London it was 21,018 ; in Cheshire and Lancashire, containing a population somewhat greater, 23,330. In all the eleven Divisions of England the deaths were less numerous, as compared with those of the March quarter of last year, except the tenth, namely, the NORTHERN COUNTIES (Durham, Northumberland, &c.), and the eleventh, Monmouthshire and Wales. In each of these two Divisions there was an increase. The SOUTH EASTERN COUNTIES also furnish an exception, but the numbers in the two quarters were almost equal.

The rate of mortality in England was 2·728 (viz., deaths to 100 persons living) against an average for the quarter of 2·522. Since the March quarter of 1855

the returns supply no example of as high a death-rate, with the exception of that of last year, when it rose in the three months to 2·773. The mortality was excessive both in the large town districts and in those districts which embrace the rural and small town population; 2·881 in the former, 2·514 in the latter; and it rose in both to nearly the same extent above the respective averages; the advantage, however, falling to the towns whose inhabitants are generally better fed, and in this important matter better fortified against the inclemency of the sky.

The effect of the winter-like severity of March doubtless remains to be read in legible characters in the registers of the quarter now running; and the lateness of that unpropitious weather must be considered in any comparison between the last two winters. The mean temperature of the winter of 1864 was 37°9' at Greenwich, and was higher by 1·4° than that of last winter; but the weather was marked by more frequent and abrupt changes, and as the cold was more seasonably confined to the first two months, its effect would be apparent chiefly on the death-registers of that quarter. The deaths from bronchitis in London in the winter quarter of 1863-5 were successively 2217, 4023, and 3217.

The following statements exhibit the progress of scarlatina and typhus in London since 1860. Scarlatina discovers a uniform well-marked tendency to increase in the last six months, and attain its maximum in the December quarter, the earlier half of the following year witnessing a decrease. It was decidedly less fatal in 1864 than in 1863; while typhus, after declining in 1863, rose again in 1864. The last quarter of the year also favours the development of typhus, but by a law which is apparently less constant.

Note.—The three months January, February, March, contain 90, in leap year, 91 days; the three months April, May, June, 91 days; each of the last two quarters of the year, 92 days. For this inequality a correction has been made in the calculations, also for the difference between 365 and 365·25 days, and 366 and 365·25 days in leap year.

Bronchitis and pneumonia, scarlatina, fever, and small-pox prevailed last winter both in town and country. Zymotic diseases ravaged South Wales, and raised the death-rate in the Welsh Division to 2·951 per cent., which is higher than the rate of London or of any other division except that of the cotton districts. Out of 438 deaths in the sub-district of Cardiff, 55 were by small-pox, 31 by measles, 20 by scarlatina. Out of 128 deaths at Llantrisant, 53 were from scarlatina. In the lower sub-district of Merthyr Tydfil out of 303 deaths, 32 were from scarlatina, 37 from measles, 11 from small-pox, and 20 from typhus. Aberdare returned 371 deaths, and of these 75 were from small-pox, and 35 from scarlatina. Of 203 deaths at Neath, small-pox caused 56, measles 31. There were 38 deaths from scarlatina at Llangafelach (Swansea), out of a total number of 143. The ill-health and the frequent deaths of the population of the Principality appeal to the pity of every patriotic Welshman.

Small-pox prevailed in many other parts; and amongst these at the following places, where it was chiefly fatal:—Tiverton, Lansdowne (Bath), Tewkesbury, Shrewsbury, Burton-on-Trent (where 41 were from small-pox out of a total number of 185), Aldridge (Walsall), Wednesbury (West Bromwich), Rowley Regis (Dudley), Birmingham, Lincoln, Liverpool, West Derby, Prescott, Warrington, Bolton, Scarborough, Easington, Chester-le-Street, Whitehaven, Pontypool, Newport. The Registrar of Chester-le-Street complains of great want of cleanliness amongst the mining population.

Scarlatina caused 20 out of 22 deaths at Northam, Southampton, a low-lying ground near the Itchen. Typhoid fever and scarlatina prevailed at Ilchester, Somersetshire, where there are old dilapidated hovels, over-crowded, and without drainage or ventilation. In the sub-district of Mount Pleasant, Liverpool, of 1150 deaths from all causes, no less than 318 were from typhus, nearly 300 of which occurred in the workhouse. At Everton, West Derby, 104 out of 775 deaths were from typhus and typhoid fever. In the sub-district of Cheetham, Manchester, there was great mortality in the workhouse at Crumpsall, 119 deaths occurred in it, 63 of which were from measles.

The Registrar of Rillington (Malton) writes as follows:

West Heslerton used to be a most healthy village until it was drained last year; but it has never been free from fever since. The drain terminated in a walled receptacle at the end of the village, which was entirely closed at the top, thus throwing poisonous gases into the houses at every back door. At a slight expense the work might be carried into a field about 300 yards from the spot, and the village thus cleared from what has proved a heavy scourge to its inhabitants.

Taking the ten large towns in the United Kingdom, the death-rate of Liverpool (borough) was 3·979 per cent. in the quarter. The next highest rate is that of Glasgow 3·898; Dublin 3·431; Manchester 3·414; Leeds 3·203; Edinburgh 3·035; Birmingham 2·874; Bristol 2·813. London and the Borough of Salford showed the lowest death-rates 2·798 and 2·796; and their rates were almost the same.

#### THE UNITED KINGDOM.

Through the courtesy of the Registrars General of Scotland and Ireland the returns can now be given for the United Kingdom. The registered births in the first quarter of the year were 261,175; the deaths 190,741. The estimated population in 1865 is 29,897,366.

\* The Registration Counties consist of groups of entire Registration Districts; which Districts are, in general, identical with the Poor Law Unions. As the principle adopted has been to place a District or Union which extends into more than one County with the County in which either the principal town or the greater part of the population is located, the limits of the Registration Counties differ more or less from the boundaries of the counties proper.

MARRIAGES Registered in the Quarters ending 31st December 1862—1864 ; BIRTHS and DEATHS Registered in the Quarters ending 31st March 1863 — 1865 ; in the DIVISIONS, REGISTRATION COUNTIES, and DISTRICTS of ENGLAND—continued.

\* The Town of Dudley is in Worcestershire, but the greater part of the population of the Dudley district (382) being located in Staffordshire, it is classed with that Registration county.—See note page 7.

† The parish of Grafton Manor (population 52 in 1861) was transferred on the 24th March 1863 from the Droitwich sub-district of Droitwich (391) to the Bromsgrove sub-district of Bromsgrove (392).

\* The parish of Healaugh (population 228 in 1861) was transferred on the 17th March 1863 from the Wetherby sub-district of Wetherby (492 c) to the Tadcaster sub-district of Tadcaster (514 a); and on the 27th April 1863 the hamlet of Swinden (population 46 in 1861) was transferred from the Kirkdeighton district (492 d) to the Wetherby district (492 c.)

† The following alterations have been made in the constitution of these districts:—on the 16th October 1862 the district of Holbeck (500 c) was formed by separating the Holbeck township from the Hunslet district (500 b); on the 8th November 1862 the district of Kirkstall (500 a) was formed by severing the whole of the remaining townships and places (except the Hunslet township) from the Hunslet district (500 b); on the 1st December 1862 the townships of Beeston and Churwell (population 2547 and 1564 respectively) were transferred from the Holbeck sub-district of Holbeck (500 c) to the Wortley sub-district of Kirkstall (500 a); and on the 5th February 1863 the district of Bramley (500 d) was formed by severing the townships of Bramley and Gildersome from the district of Kirkstall (500 a).

\* The union of Pontypridd, consisting of parishes taken from the districts of Cardiff (581a) and Merthyr Tydfil (582), was formed on 18th July 1863.

† The number of districts is increased to 641 by the formation of the following 18 new districts: Mile End Old Town (24b), Dulverton (213b), Whitechurch, Salop (363b), Birkenhead (480b), Great Ouseburn (492a), Wetherby (492c), Kirkdeighton (492d), Wharfedale (493b), Kirkstall (500a), Holbeck (500c), Bramley (500d), Hemsworth (504b), Castleford (504c), Brumham (514b), Hartlepool (541b), Bedwelty (578b), Pontypridd (581b), and Gower (585b).

Remarks on the Weather, during the Quarter ending 31st of March 1865. By JAMES GLAISHER, ESQ., F.R.S., &c., Secretary of the British Meteorological Society.

THE month of January opened with cold frosty weather ; on the 4th day a warm period set in and continued to the 16th ; the average daily excess of temperature being  $5\frac{1}{2}^{\circ}$ . During this period, although the weather was mild for the season, the sky was mostly cloudy and the wind was frequently blowing a gale ; there were pressures of 21 lbs. on the square foot on the 6th, of 15 lbs. on the 12th ; of  $17\frac{1}{2}$  lbs. on the 13th ; and of no less than 29 lbs. on the 14th.

From 17th January to the end of the quarter, with the exception of a few days at the beginning and end of February, the weather was cold for the season, at times unpleasantly so, particularly after 20th of January, about the middle of February, and towards the end of March. At these times the temperature in January was as low as  $20^{\circ}$  at many places ; in February from  $13^{\circ}$  to  $20^{\circ}$ , and as low as  $8^{\circ}$  at Birmingham ; and in March at the time of the equinox it was as low as  $23^{\circ}$ . The deficiency of temperature on some days was as large as  $9^{\circ}$  to  $14^{\circ}$ , and for the 74 days ending 31st March was the very large average amount for so long a period as  $3^{\circ}\cdot8$  daily.

In January and February snow storms were frequent, producing a good supply of water, and thus relieved the farmers in many parts of England of the necessity of fetching water from a distance, which they had been compelled to do for months previously. The snow-falls extended all over England and Scotland. On several days at the end of February the weather was extremely wild and stormy. Snow to small amounts continued to fall, chiefly crystalline, in March, till after the equinox, and the month was cold and ungenial throughout, its mean temperature being the same as in February, and only  $\frac{1}{4}^{\circ}$  above that in January.

The mean temperature of January was  $36^{\circ}\cdot3$ , being  $1^{\circ}\cdot9$  below the average of the preceding 24 years, and  $0^{\circ}\cdot2$  less than that in 1864.

The mean temperature of February was  $36^{\circ}\cdot6$ , being  $2^{\circ}\cdot1$  below the average of the preceding 24 years, but  $0^{\circ}\cdot6$  above that in 1864.

The mean temperature of March was  $36^{\circ}\cdot6$ , being  $5^{\circ}\cdot4$  below the average of the preceding 24 years, and  $4^{\circ}\cdot7$  below that of 1864.

The temperature in March is therefore very remarkable, as we have to go back 20 years to find one so cold, viz., in the year 1845, when it was  $35^{\circ}\cdot2$  ; in 1837 it was  $35^{\circ}\cdot8$ . The next very cold March was in 1814, when it was  $35^{\circ}\cdot1$  ; and for 25 years before that there was no instance of such low temperature ; in 1789 it was  $34^{\circ}\cdot4$  ; in 1786 it was  $34^{\circ}\cdot2$  ; in 1785,  $33^{\circ}\cdot9$  ; in 1784,  $36^{\circ}\cdot2$  ; and in 1771 it was  $34^{\circ}\cdot7$ . From this it will be seen that the month of March was much more frequently cold towards the end of last century than lately.

Usually February is  $2^{\circ}$  warmer and March  $5^{\circ}$  warmer than January. This year the mean temperature of each month has been very nearly the same ; the usual increase has not taken place.

The mean high day temperature was below their averages to the amounts of  $2^{\circ}\cdot3$ ,  $2^{\circ}\cdot7$ , and  $6^{\circ}\cdot2$  respectively, in these three months.

The mean low night temperature was below their averages to the amounts of  $1^{\circ}\cdot7$ ,  $1^{\circ}\cdot3$ , and  $4^{\circ}\cdot3$  respectively.

Therefore both the days and nights were very cold in these three months, particularly in March.

The mean temperature of the dew point was  $2^{\circ}\cdot1$ ,  $2^{\circ}\cdot6$ , and  $1^{\circ}\cdot9$  below their respective averages in the preceding 24 years.

The degree of humidity was a little above its average in January, below in February, and the same as the average in March.

The pressure of the atmosphere was a little more than  $\frac{1}{8}$  inch in defect in January, and slightly in defect in February and March, it being very nearly of the same values in the last two months.

The range of Readings of the Barometer in January and February was about  $1\frac{1}{2}$  inch at southern, gradually increasing to nearly 2 inches at extreme northern stations ; and in March was about 1 inch at all stations.

The fall of rain was in excess in January and February and in defect in March.

The mean temperature of the air at Greenwich in the three months ending February, constituting the three winter months, was  $37^{\circ}\cdot1$ , being  $0^{\circ}\cdot7$  below the average of the preceding 94 years.

Snow fell on 81 days during the quarter at one or other part of the country ; on some days over the whole of the country at the same time.

Hail fell on 17 days in January, on 11 in February, and on 14 in March.

Fog was prevalent on 47 days during the quarter, 18 in January, 19 in February, and on 10 days in March.

NOTE.—In reading this table it will be borne in mind that the sign (—) minus signifies below the average, and that the sign (+) plus signifies above the average.

*Thunder storms occurred or thunder was heard and lightning was seen* on 6th January at Castleton and Wakefield; on the 13th at Oxford; on the 17th at Lampeter; and on the 27th at North Shields. On 17th February at Guernsey and Liverpool; and on the 28th at Belvoir and Grantham. On 26th March at Wilton and Carlisle; and on the 27th at Carlisle.

*Thunder was heard but lightning was not seen* on 13th and 14th January at Streatley; and on the 24th at North Shields. On 17th February at Kingsley; and on the 19th at Abington. On 12th March at Norwich; and on the 29th at Holkham.

*Lightning was seen but thunder was not heard* on 12th January at Berkhamstead; on the 19th at Guernsey; and on the 31st at Guernsey and Clifton. On 9th February at Camden Town; on the 17th at Truro and Stonyhurst; on the 19th at Wisbeach; and on the 28th at Brighton, Camden Town, and Wisbeach. On 26th March at Silloth and North Shields.

*Solar halos were seen* on 5th January at Great Berkhamstead; on the 6th at Clifton; on the 10th at Hawarden; on the 15th at Great Berkhamstead; on the 21st at Oxford; on the 22d at Clifton and Great Berkhamstead; on the 23d at Clifton and Lampeter; on the 28th at Oxford; on the 29th at Oxford, Great Berkhamstead, and North Shields; and on the 30th at Oxford. On 12th February at Brighton; on the 15th at Oxford; and on the 16th at Grantham. On 6th March at Great Berkhamstead; on the 10th at Brighton; on the 21st at Clifton, Great Berkhamstead, Lampeter, Hawarden, and Eccles; on the 24th at Brighton; on the 25th at Brighton and Cardington; and on the 27th at Lampeter, Hawarden, and Penketh.

*Lunar halos were seen* on 4th January at Wisbeach and Belvoir; on the 5th at Belvoir; on the 7th at Oxford and Belvoir; on the 8th at Oxford; on the 11th at Clifton and North Shields; and on the 14th at Camden Town and Great Berkhamstead. On 4th February at Helston; on the 5th at Carlisle; on the 8th and 9th at Allenheads; on the 10th at Hawarden, Kingsley, and Allenheads; and on the 12th at Clifton. On 1st March at Allenheads; on the 2d at Carlisle; on the 3d at Marlborough, Cardington, Hawarden, Penketh, Liverpool, and Cockermouth; on the 4th at Hawarden, Penketh, and Liverpool; on the 5th at Banbury, Royston, Abington, Diss, Wisbeach, Grantham, and Holkham; on the 6th at Great Berkhamstead and Galway; on the 7th at Kingsley, Liverpool, and Silloth; on the 8th at Camden Town; and on the 31st at Penketh.

*Aurora were seen* on 16th January at Clifton, Hawarden, Stonyhurst, and Silloth; on the 25th at Cockermouth and Allenheads; on the 28th at Brighton, Oxford, Cardington, Bedford, Hawarden, Silloth, Bywell, and North Shields; and on the 30th at Silloth. On 15th February at Allenheads, Carlisle, and North Shields; on the 17th at Aldershot, Clifton, Oxford, and Great Berkhamstead, Royston, Wisbeach, Grantham, and Hawarden; on the 18th at Hawarden; on the 20th at Clifton, Wisbeach, Hawarden, and North Shields; on the 22d and 24th at Clifton; and on the 25th at Bywell. On 1st March at Silloth; on the 20th at Brighton, Marlborough, Clifton, Camden Town, Great Berkhamstead, Royston, Abington, Cardington, Wisbeach, Grantham, Hawarden, Kingsley, Penketh, Eccles, Cockermouth, Silloth, Carlisle, and Galway; on the 21st at Banbury and Hawarden; and on the 26th at Abington.

At *Guernsey* the mean reading of the barometer for the month of January was 0'388 inch below the average of 21 years. The mean temperature of the air was 1°·8, 1°·9, and 4°·8 below the averages of 21 years respectively in these three months. The mean temperature of February was not very low, but more continuous than usual; that of March this year has been lower than that of any March during the last 21 years, with but two exceptions, which were in 1845 and 1853. The amount of rain collected was 4'05 inches in January and 1'90 inch in February above their respective averages. The immoderate quantity of rain which fell in January seems to have replaced snow, of which only a few flakes fell, and none settled on any object. The number of rainy days in January, above its average, was six; and in February five. There were frequent heavy gales, rain, and remarkable lulls in February; no snow settled during the month.

At *Clifton* snow fell to the depth of 5 inches on the 27th of January, and fell frequently at other times.

At *Osborne* during the night of the 13th and early morning of the 14th of January the pressure of the wind on the square foot reached 23 lbs., when the anemometer connector broke. This was repaired by 2 P.M., and at 2h. 15m. P.M. an extraordinary strong gust of wind reached 32 lbs.; the pressure then continued between 10 lbs. and 14 lbs. during the remainder of the day.

At *Downside College near Bath* the barometer was very low during the month of January, falling down to 27'978 on the 14th. During the night of the 28th the fog froze on the trees and covered everything with ice, presenting a brilliant appearance in the sun, and causing great havoc among the branches of the trees through the weight of the ice; all the shrubs, laurels, &c. were prostrated on the ground by the weight of the ice and snow on their leaves.

At *Aldershot* there were 26 days of frost in January; on the 14th a tremendous gale raged from 11 A.M. till noon, blowing down several large trees: Robinson's anemometer recorded 74 miles per

hour. There were 16 days of frost in February; on the 19th a gale sprang up from the W., blowing with violence; at 3 P.M. it veered round to N.W. with increased fury, when a pressure of 27 lbs. on the square foot was registered. This gale continued with but little intermission during the following day. There were also violent gales on the 19th and 20th of March.

At *Streatley* on January 14th hail fell to the depth of 2 inches during a thunder storm.

At *Great Berkhamstead* from the 3d to the 16th of January it was mild for the season, with high winds, and from the 16th to the 31st it was cold and winterly; there were frequent heavy falls of snow. From February 1st to the 7th the weather was overcast, damp, and foggy; from the 8th to the 22d cold and frosty, with heavy falls of snow; high winds on the 18th, 19th, and 20th; from the 23d to the 28th mild, and rainy at times. The ground was covered with snow from the 10th to near the end of the month. March was very cold from the 3d to the 30th; the 31st was fine and warm. Snow fell on 15 days, but mostly in small quantities.

At *Wisbeach* there were gales on the 19th and 20th of February, pressure on the square foot 10 lbs. The greatest depth of snow during the winter was 6 inches on the 17th.

At *Eccles* there has not been so great a fall of snow as that which fell on the 16th and 17th of February since 4th March 1862. For nearly three hours at noon on the 19th a storm passed over this observatory, varying from 40 to 70 miles per hour (Dr. Robinson's anemometer, 32 feet from the ground). Much damage was done to house roofs in the neighbourhood. During the whole day the barometer reading increased at the rate of 0.05 inch per hour.

At *Otley* the River Wharfe was frozen over on the 29th and 30th of January, but began to thaw on the 30th.

At *Cockermouth* there was frost from the 19th to the 29th of the month. A remarkable depression of the barometer occurred on the 13th and 14th, the lowest reading being 28.172 in. at 8h. A.M. on the 14th, when the mercury was lower than it has been here during the last three years. *There was no fall or light wind accompanying or following it: Wind from W.S.W. to S.S.W.* There were two heavy falls of snow during the month of February, on the 11th and 17th, the depth being 4½ inches on each occasion. A remarkable rise in the barometer occurred on the 19th to the extent of 0.942 in. in 12 hours, between 9h. A.M. and 9h. P.M., or 1.339 in. from the morning of the 19th to the same hour on the 20th. Frost set in on the 9th, and, with one or two slight exceptions, continued till the 21st of the month. On the 4th March 0.9 in. of rain fell in 6 hours, being more than one-third of the total rain-fall during the month. The greatest depression of the barometer occurred during the same time, the extreme readings, highest and lowest, being within 48 hours. March was a dry, but cold month; no rain fell from the 13th to the 24th. Snow remained on the neighbouring mountains during the whole month.

At *Silloth* the longest extreme depression of the barometer ever observed here was between the 12th and 16th of January, when it was below 29 inches. On 5 days only in the last 12 years has the cold been more intense than it was on the 15th of February.

At *Carlisle* more snow fell during the month of February than at any time during several years.

At *Culloden* the mean temperature of February was about 20° below its average, and nearly as low as that of the previous month. Snow fell to a greater depth than in any previous winter within the last 30 years; on the night of the 16th the fall was fully 8 inches. The 19th was very stormy throughout, with more snow, and heavy drift, which blocked up all the roads and railways, and accumulated in wreaths of 5 and 6 feet in thickness, and on the 20th the total depth of snow on the ground where not drifted amounted to 16 inches.

At *Miltown Banbridge* (Ireland) we have had a rather favourable winter for bleaching, as the frosts have not been so long nor so intense as usual. There has been a good deal of drying weather, which prepares the linens, after they have been lifted from the ground, for the chemicals.

*Leaf buds first appeared on the Elm on 15th March at Guernsey.*

*Leaf buds first appeared on the Lime on 5th February at Oxford.*

*Leaf buds first appeared on the Horse Chesnut on 5th February at Oxford, 10th March at Guernsey, the 14th at Helston, and on the 29th at Galway (Ireland).*

*Leaf buds first appeared on the Hazel on 5th February at Oxford.*

*Leaf buds first appeared on the Hawthorn on 1st March at Oxford, 15th at Guernsey, and 20th at Helston.*

*Leaf buds first appeared on the Poplar on 2d March at Oxford.*

*Leaf buds first appeared on the Walnut on 7th March at Oxford.*

*Leaf buds first appeared on the Sycamore on 10th March at Guernsey and on the 21st at Galway.*

*Leaf buds first appeared on the Apple Tree on 11th March at Wisbeach.*

*The Peach was in blossom on 11th March at Helston and on the 30th at Guernsey.*

*The Plum was in blossom on 25th March at Guernsey.*

*A few Apricot blossoms just bursting on 31st March at Oxford.*

*The Yellow Crocus was in flower on 5th January at North Shields.*

*The Polianthus was in flower on 6th January at North Shields.*

*The Blue Hepatica was in flower on 8th January at North Shields.*

*The Pink Hepatica was in flower on 12th February at North Shields and on the 27th at Great Berkhamstead.*

*Pansy was in flower on 10th January at North Shields.*

*Snowdrops were in flower on 20th January at North Shields and Culloden, and on 4th February at Great Berkhamstead.*

*Lilac was in flower on 21st January at North Shields.*

*Crocuses were in flower on 1st February at North Shields, 24th at Silloth, and on the 27th at Great Berkhamstead.*

*Saxifrage was in flower on 20th February at North Shields.*

*Thrushes were heard singing on 25th February at Silloth and on the 28th at Culloden.*

*Larks were heard singing on 22d February at Culloden.*

*Chaffinches were heard singing on 26th February at Culloden.*

At *North Shields* on 12th March a flock of wild ducks were seen travelling southwards.

The Observations have been reduced to Mean values by Glaisher's Barometrical and Diurnal Range Tables, and the Hygrometrical results have been deduced from his second edition of Hygrometrical Tables.

Ventnor and Osborne.—The differences in temperature and humidity between these two places are very great, and seems to be too large. Ventnor by comparison is made to appear much warmer and drier than Osborne, by differences I think too great.

Year 1865.	Month.	Names of Stations and Observers.	Pressure of Air in Month.		Temperature of Air in Month.				Mean Tem- perature.		Vapour.		Mean Reading of Thermometer.		Wind.			Mean Amount of Cloud.		Rain.  Number of Days	Amount col- lected.					
			Mean.	Range.	Highest.	Lowest.	Range.	Mean.		Dew Point.	Elastic Force.	Mean.	Short of Saturation.	In a cubic foot of Air.	Minimum on Glass.	Estimated Strength.	Relative Proportion of					Mean Amount of Ozone.	Mean Amount of Cloud.			
								Of all Highest.	Of all Lowest.								Daily Range.	N.	E.					S.	W.

Battersea, January, the number of days of rain seems to be too small, as compared with adjacent stations, and in the column of notes there are two days on which rain is mentioned, but the amount on these days is not stated.

Year 1865.	Names of Stations and Observers.	Pressure of Atmosphere in Month.		Temperature of Air in Month.				Mean Tem- perature.	Vapour.		Mean Degree of Humi- dity. Sat. = 100. The readings of the barometer at Brighton and Aspley seem to be too low, and those of January and March at Hawarden are evidently wrong. At Banbury, on several days in February and March, the readings of the wet bulb thermometer are too near those of the dry bulb. At Battersea the reading of the barometer on the 22d of March at 3 P.M. has been altered from 31.028 in. to 30.028 in. The returns from Norwich for January and Galway for February are too incomplete for publication.

Second Rain-gauges are placed.—At Aldershot, 22 feet above the ground, the amount collected was 5.9 inches; at Clifton, 50 feet, 5.2 inches; at Cardington, 36 feet, 5.2 inches; at Diss, 6 feet, 7.1 inches; at Wisbeach, 8 feet, 5.3 inches; at Kingsley, 13 feet, 3.9 inches; at Cockermouth, 6½ feet, 8.7 inches; at Allenheads, 6½ feet, 6.3 inches; and at Bann Reservoir (Ireland), latitude 54° 15' N., longitude 6° 2' W., and 440 feet above the level of the sea, 10.6 inches.

ERRATA.—In the quarter ending March 1864, 1st page, 18th, 20th, and 22nd lines from top, for 1862 read 1863.

In the quarter ending September 1864, 1st page, 3rd line from top, for degree of humidity, for 76 read 70.

In the quarter ending September 1864, September mean monthly dew point at Guernsey, for 56.3 read 54.0.

In the quarter ending December 1864, omit the note about the barometer at Battersea.

NAMES OF STATIONS.	Mean Pressure of dry Air reduced to the level of the Sea.	Highest Reading of the Thermometer.	Lowest Reading of the Thermometer.	Range of Temperature in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation.	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Maximum in Rays of Sun.	Mean Reading of Minimum on Grass.	WIND.				Mean Amount of Ozone.	Mean Amount of Cloud.	RAIN.			
																		Relative Proportion of						Mean Amount of Days on which it fell.	Amount collected.

## REGISTRARS' NOTES.

*In compliance with the following instruction, remarks have in many instances been appended by the Registrars to their Returns; from which the following Notes have been selected. The Registrars alone must be considered responsible for the opinions which they express.*

## INSTRUCTION TO REGISTRARS:—

“If the Deaths registered during the quarter have been above or below the average, state whether, in your opinion, the fact is wholly or partially accounted for by sanitary arrangements, by increase or decrease of population, the weather, Small-pox, Measles, Scarlatina, Whooping-cough, Fever (including typhus, typhoid, relapsing, infantile fever), Cholera, Diarrhoea (including bowel complaint), Dysentery, Bronchitis, or other disease. Also with regard to increase or decrease of Births, you may mention any circumstance to which it may be attributed. By ‘Average’ must be understood *not* the average of numbers in other quarters of the year, but the average of *corresponding* quarters in four or five previous years.”

The figures prefixed refer to the numbers of the District and Sub-District. The name of the District is in SMALL CAPITALS, that of the Sub-district in *italics*.

## II. SOUTH-EASTERN COUNTIES.

1. SURREY (*extra-metropolitan*).

40; 1. FARNHAM; *Frimley*.—Births 200; Deaths 132. 22 deaths occurred from scarlatina.

41; 2. FARNBOROUGH; *Headley*.—Births 28; Deaths 28. The deaths exceed those of any previous quarter; they are 9 above the average of the corresponding quarters of the last 4 years. The increase is attributable to the prevalence of typhoid fever and infantile complaints.

2. KENT (*extra-metropolitan*).

64; 2. BRIDGE; *Barham*.—Births 50; Deaths 52. The deaths exhibit a considerable increase, the average number being only 33. There were 5 deaths from scarlatina, and 4 from diphtheria.

## 3. SUSSEX.

75; 1. RYE; *Rye*.—Births 61; Deaths 37. Births and deaths are about the average. There have been, during the quarter, upwards of 30 cases of small-pox, one only proving fatal; and that, with some others, came from Hastings.

85; 2. BRIGHTON; *St. Peter*.—Births 482; Deaths 433. There has been a great increase of deaths in this sub-district during the past quarter. They exceed by 150 the average of 5 corresponding quarters. 24 deaths were from small-pox.

92; 3. CHICHESTER; *South Bersted*.—Births 22; Deaths 26. The deaths exhibit an unprecedentedly high number. There has been an immense amount of sickness from whooping-cough; 14 children died of it. Scarcely a house in the parish escaped it.

## 4. HAMPSHIRE.

105; 1. SOUTHAMPTON; *Southampton*.—Births 445; Deaths 315. The deaths are 57 above the average of corresponding quarters of the previous 5 years. Small-pox has been very prevalent in this district for several months past, but the deaths have been few in comparison with the number of cases, only 18 fatal cases having been recorded. Scarlatina has also been very prevalent at Northam, containing about 3,000 inhabitants, a low lying part of the district, near the River Itchen, where 20 deaths have resulted from that disease out of 22 in the whole district.

109; 3. WINCHESTER; *Winchester*.—Births 120; Deaths 110. The births are about the usual number, and although it has been considered to be a severe and unhealthy season, the deaths have not reached their amount at this time last year. Among the causes of death pulmonary affections, as usual, take the lead; thus there are 13 deaths from bronchitis, 10 from pneumonia, 11 from phthisis, and 3 from variola. The first cases reported of small-pox were those of two soldiers, who brought it to the barrack hospital from Aldershot. Due care was taken to prevent its spreading there; but after 5 or 6 weeks it showed itself again in a policeman's wife, who lived in an airy dwelling about 20 yards from the back of that hospital. She had 5 children about her, who had been vaccinated by me some years ago, and took no harm; but at an inn some 20 yards below the barmaid took it and died; the master and mistress took it, and recovered; but a draper's assistant, who was said to be an admirer of the girl, died with it in the confluent form. Since this it has not spread, and vaccination and re-vaccination have been most vigorously prosecuted by the Union medical officers, as well as by me and my colleagues in general practice.

## 5. BERKSHIRE.

120; 3. NEWBURY; *Speen*.—Births 69; Deaths 44. I would suggest that a record be kept of all infants stillborn. Information should be given to the registrar by the doctor, midwife, or other person in attendance, and the registrar would give a burial certificate in exchange for it.

## III. SOUTH MIDLAND COUNTIES.

## 7. HERTFORDSHIRE.

146; 1. HEMEL HEMPSTEAD; *King's Langley*.—Births 26; Deaths 22. There has been much sickness, owing to the coldness of the weather. Small-pox has prevailed very much at Bovington.

## 8. BUCKINGHAMSHIRE.

150; 4. WYCOMBE; *Wendover*.—Births 49; Deaths 42. Scarlatina is still very prevalent in my district. It caused 8 deaths in the quarter. The cold weather carried off several old people, and the total number of deaths is nearly double the average.

#### 10. NORTHAMPTONSHIRE.

168; 2. NORTHAMPTON; *All Saints*.—Births 160; Deaths 116. Small-pox is getting rather prevalent. I have registered 14 cases of it this quarter.

175; 2. PETERBOROUGH; *Peterborough*.—Births 219; Deaths 125. There were 10 deaths from diphtheria.

#### 12. BEDFORDSHIRE.

183; 1. LEIGHTON BUZZARD; *Leighton Buzzard*.—Births 80; Deaths 60. Small-pox has been very prevalent, but has now subsided. It was fatal in 4 cases.

### IV. EASTERN COUNTIES.

#### 16. NORFOLK.

231; 2. ERPINGHAM; *Cromer*.—Births 70; Deaths 43. 7 illegitimate children were born in the sub-district of Cromer in the last quarter. The mothers of two of these were young girls; one 16 years of age, the other 14.

### V. SOUTH-WESTERN COUNTIES.

#### 17. WILTSHIRE.

250; 2. HIGHWORTH; *Swindon*.—Births 138; Deaths 68. Several cases of small-pox, one fatal, occurred at New Swindon; and there is every probability that it will increase. Several cases also at Wroughton.

254; 1. CALNE; *Calne*.—Births 65; Deaths 72.—The increase in number of deaths is to be attributed to the prevalence of scarlatina.

256; 3. DEVIZES; *Bromham*.—Births 42; Deaths 43. The deaths are above the average; 10 occurred from scarlatina, and 6 from bronchitis.

#### 18. DORSETSHIRE.

274; 2. WEYMOUTH; *Weymouth*.—Births 122; Deaths 92. The deaths exceed those of any corresponding quarter since 1852, except that of 1855, when they were 105. The quarter has been very fatal to very aged persons. I have incidentally heard of many cases of small-pox, but it has been fatal in 3 cases only.

#### 19. DEVONSHIRE.

281; 7. ST. THOMAS; *St. Thomas*.—Births 50; Deaths 57. The deaths are above the average. There were 7 from small-pox, and 7 from scarlatina.

293; 4. TIVERTON; *Tiverton*.—Births 71; Deaths 114. The deaths for the past quarter are 41 above the average of the corresponding quarter in the previous 5 years. 21 cases of small-pox have been registered.

293; 6. TIVERTON; *Bampton*.—Births 24; Deaths 11. During the last quarter small-pox has been very prevalent in some parts of this sub-district, but one case only proved fatal. The general health otherwise good.

#### 21. SOMERSETSHIRE.

318; 1. CHARD; *Ilminster*.—Births 71; Deaths 72. Deaths far above the average. Scarlatina maligna and fever caused 24 deaths, out of which 18 were in the parish of Shipton Beauchamp.

319; 5. YEovil; *Ilchester*.—Births 11; Deaths 18. Typhoid fever and scarlatina have prevailed in this district, during the last quarter; the former, I am fully persuaded, arising from over crowding in old dilapidated hovels, with bad drainage and worse ventilation.

325; 2. CLUTTON; *Chew Magna*.—Births 38; Deaths 31. Measles has been very prevalent at Pensford, Publow, and Stanton Drew. 6 deaths were from that cause; 2 amongst adults. Some erratic cases of scarlatina and small-pox have occurred. No death from small-pox in the district. Secondary vaccination in the parishes, whenever a case made its appearance, effectually checked the spread of the complaint. 4 deaths were from scarlatina and its sequelæ.

325; 4. CLUTTON; *Midsomer Norton*.—Births 85; Deaths 68. 16 deaths were from scarlatina.

326; 6. BATH; *Lansdowne*.—Births 84; Deaths 95. 10 deaths have been registered from small-pox. Scarlatina, which prevailed to such a great extent for the previous 15 months, has now nearly left us, and small-pox seems to have taken its place, and in the same localities. Nearly half the deaths from it have been in adults who neglected vaccination. There is still the same prejudice and ignorance amongst the poor in reference to vaccination as ever. Measles also prevails, being epidemic. Altogether, taking the severity of the winter into consideration, the district may be considered more healthy than it was in the previous 15 months.

### VI. WEST MIDLAND COUNTIES.

#### 22. GLOUCESTERSHIRE.

330; 4. CLIFTON; *St. Philip and Jacob*.—Births 363; Deaths 208. Deaths above the average. Fever has been prevalent.

336; 2. GLOUCESTER; *St. Nicholas*.—Births 78; Deaths 57. The deaths are above the average in consequence of fever in the low parts of the district. From typhus and typhoid fever 7 deaths.

338; 4. STROUD; *Stroud*.—Births 68; Deaths 80. Scarlatina has extensively prevailed in the district, and 4 deaths occurred from this cause. Upwards of 100 cases of small-pox occurred in the district during the quarter, and 6 were fatal. This epidemic is now subsiding.

345; 3. TEWKESBURY; *Tewkesbury*.—Births 60; Deaths 64. Deaths 14 above the average. 14 were from small-pox.

#### 23. HEREFORDSHIRE.

351; 3. LEOMINSTER; *Kingsland*.—Births 28; Deaths 31. Deaths above the average. Small-pox has been prevalent during the last six months, and has been fatal in 3 cases within the last three months.

#### 24. SHROPSHIRE.

358; 2. MADELEY; *Madeley*.—Births 106; Deaths 96. The deaths are above the average. Sanitary arrangements are very defective in this district. Small-pox was fatal in 5 cases.

359; 1. ATCHAM; *Conover*.—Births 43; Deaths 36. Small-pox has been prevalent in this sub-district during the past quarter. It was almost entirely confined to adults; children have generally escaped the infection, owing, it would seem, to the protection of vaccination.

360; 1. SHREWSBURY; *St. Mary*.—Births 120; Deaths 199. The deaths greatly exceed the average. 27 cases of small-pox were registered; not vaccinated 17, vaccinated 5, uncertain 5. In Factory Yard, Coleham, being one building let out in rooms, chiefly occupied by Irish, 8 deaths from small-pox occurred, 4 of which were in one family. This building is greatly in want of sanitary improvement.

360; 2. SHREWSBURY; *St. Chad*.—Births 70; Deaths 92. The mortality in this district is greatly in excess of the average. Small-pox, typhoid fever, measles, and other epidemic diseases are prevalent. The great importance of sewerage for Shrewsbury was urged some years ago in a memorial drawn up by the medical men of the town, but nothing whatever has been done.

365; 3. WELLINGTON; *Wombidge*.—Births 96; Deaths 41. Small-pox has been very prevalent in the district during the last quarter. In many instances the whole of a family has been afflicted with it at the same time. There were 2 deaths from small-pox during the quarter.

#### 25. STAFFORDSHIRE.

375; 4. BURTON-ON-TRENT; *Burton-on-Trent*.—Births 250; Deaths 185. Small-pox and measles have prevailed during the last quarter; and there have been 41 deaths from small-pox, and 12 from measles.

379; 4. WOLVERHAMPTON; *West*.—Births 284; Deaths 147. I have only registered in the last quarter a single case of small-pox. This fact is satisfactory. During the prolonged and severe winter many persons suffered from attacks of bronchitis, and in a considerable number of cases the disease terminated fatally. Persons advanced in years were the greatest sufferers.

379; 7. WOLVERHAMPTON; *Bilston*.—Births 320; Deaths 213. Scarlatina was fatal in 23 cases.

380; 4. WALSALL; *Aldridge*.—Births 87; Deaths 65. The deaths are above the average, partly in consequence of small-pox, which was fatal in 15 cases.

381; 5. WEST BROMWICH; *Wednesbury*.—Births 316; Deaths 158. The deaths are above the average. There were 13 from small pox.

382; 1. DUDLEY; *Rowley Regis*.—Births 316; Deaths 184. The deaths are rather above the average, which is, I think, accounted for by the prevalence of small-pox and scarlatina. Small pox caused 14 deaths; scarlatina 7.

#### 26. WORCESTERSHIRE.

383; 2. STOURBRIDGE; *Stourbridge*.—Births 240; Deaths 155. Small-pox still lingers in the district, and 8 deaths have been registered from that cause. The severe cold has caused unusual mortality among aged and infirm persons, and the infants of the poor, so that the number of deaths is rather above the average.

390; 3. PERSHORE; *Upton Snodsbury*.—Births 25; Deaths 24. The deaths are more than the average; 7 from scarlatina; one from small-pox.

#### 27. WARWICKSHIRE.

394; 1. BIRMINGHAM; *Lady Wood*.—Births 428; Deaths 219. Bronchitis caused 48 deaths; small-pox 12.

394; 3. BIRMINGHAM; *St. Martin*.—Births 312; Deaths 217. 9 deaths from small-pox were registered. A woman died at the age of 102 years.

394; 8. BIRMINGHAM; *St. George*.—Births 544; Deaths 372. Bronchitis caused 67 deaths; small-pox 17.

395; 2. ASTON; *Duddeston*.—Births 468; Deaths 285. 11 deaths have occurred from small-pox during the quarter, but that disease is not at all prevalent at the present time.

### VII. NORTH MIDLAND COUNTIES.

#### 30. LINCOLNSHIRE.

421; 2. STAMFORD; *Barnack*.—Births 50; Deaths 50. The deaths are very much above the average, owing in a great measure to the very severe winter. Scarlatina has also been very prevalent, and 12 deaths occurred from that disease.

428; 2. LINCOLN; *Home*.—Births 257; Deaths 227. The deaths are considerably above the average. 21 from small-pox.

434; 1. GAINSBOROUGH; *Owston*.—Births 30; Deaths 39. The deaths are above the average, arising from the prevalence of fever.

#### 31. NOTTINGHAMSHIRE.

437; 3. MANSFIELD; *Blackwell*.—Births 60; Deaths 48. Small-pox has been prevalent in part of my district during the quarter. I have had 8 deaths from that disease.

437; 4. MANSFIELD; *Sutton-in-Ashfield*.—Births 86; Deaths 56. 3 deaths were caused by small-pox in the quarter. There have been several cases of the complaint in the hamlet of Hucknall-under-Huthwaite.

438; 5. BASFORD; *Arnold*.—Births 85; Deaths 58. The return of deaths is rather above the average of corresponding quarters in the last ten years, which I attribute to the prevalence of scarlatina, 11 children and one adult having succumbed to that disease. The births are also rather more than the average of the same quarters, which I cannot account for, as there has been a gradual decrease of population, which is still going on, owing to the continued slackness of trade in the framework-knitting branch, and the constant removal of machinery from the villages to factories in Nottingham and its environs.

440; 3. NOTTINGHAM; *St. Ann*.—Births 244; Deaths 204. Taking the corresponding quarters in the last five years, I find that in last quarter the births exceeded the average by 29, and the deaths by 36. During the first part of the quarter scarlatina was very prevalent. 93 deaths occurred to children under five years of age.

442; 1. NEWARK; *North Collingham*.—Births 43; Deaths 33. Small-pox and scarlatina very prevalent. 3 cases of the former (unvaccinated) proved fatal. The deaths were above the average; the mortality being heavy amongst the aged, which I attribute to the severity of the season.

#### 32. DERBYSHIRE.

445; 2. DERBY; *St. Peter*.—Births 378; Deaths 224. Small-pox was fatal in 8 cases; scarlatina in 18.

### VIII. NORTH-WESTERN COUNTIES.

#### 33. CHESHIRE.

452; 2. STOCKPORT; *Hyde*.—Births 166; Deaths 142. The deaths are above the average, partly from

the severity of the winter and partly from the prevalence of fever, 7 deaths having been caused by typhoid fever, and 3 by "fever" not otherwise designated.

453; 8. MACCLESFIELD; *Alderley*.—Births 33; Deaths 28. The deaths are above the average of corresponding quarters. There were 2 from scarlatina and 6 from diphtheria. The locality in which the latter prevailed is dry and healthy.

455; 3. RUNCORN; *Runcorn*.—Births 170; Deaths 16. There were 7 deaths from small-pox.

459; 3. GREAT BOUGHTON; *Chester Cathedral*.—Births 194; Deaths 167.—There were 7 deaths from small-pox.

### 34. LANCASHIRE.

461; 1. LIVERPOOL; *St. Martin*.—Births 975; Deaths 656. In comparing the deaths in this quarter with those of that which ended December 1864, caused by fever and small-pox, a marked decrease is shown: Deaths caused by fever 69; small-pox 40.

461; 2. LIVERPOOL; *Howard-street*.—Births 242; Deaths 247. The deaths are 13 below the average of corresponding quarters of the last four years. There were 51 from bronchitis, 28 from phthisis, 16 from typhus, 16 from "fever," 15 from small-pox.

461; 3. LIVERPOOL; *Dale-street*.—Births 270; Deaths 281. I have registered in the past quarter the large number of 30 deaths from small-pox, of which 12 occurred to persons who had been vaccinated; also 45 deaths from fever. The parochial authorities have used great exertions to prevent the spread of infection from either of those causes; otherwise I have no doubt the mortality would have been much greater. The total deaths are about an average.

461; 6. LIVERPOOL; *Mount Pleasant*.—Births 478; Deaths 1150. Bronchitis caused 112 deaths; typhus 318 (nearly 300 of which occurred in the Liverpool workhouse); phthisis 116.

461; 7. LIVERPOOL; *Islington*.—Births 374; Deaths 401. The deaths are much above the average of corresponding quarters. 36 were from typhus, 12 from scarlatina, 15 from small-pox, 75 from bronchitis.

462; 2. WEST DERBY; *Everton*.—Births 1080; Deaths 775. Fever (including typhus, typhoid, and infantile fever) has caused 104 deaths, scarlatina 11, small-pox 56. I fear that vaccination has not hitherto been properly attended to. The Health Committee are very earnest in trying to remove nuisances that produce fever, but the intemperate habits of the people prevent a great deal of the good that would otherwise result from their measures.

462; 5. WEST DERBY; *Litherland*.—Births 42; Deaths 30. Fever and small-pox have been very prevalent, but only one case was fatal.

462; 6. WEST DERBY; *West Derby*.—Births 654; Deaths 341. The deaths are 17 more than the average of corresponding quarters of four previous years. There were 15 from typhus, 46 from bronchitis, 11 from scarlatina, and 10 from small-pox.

463; 5. PRESCOT; *Prescot*.—Births 133; Deaths 98. Small-pox and fever prevalent during the quarter. Small-pox caused 19 deaths, fever 14.

465; 3. WIGAN; *Wigan*.—Births 442; Deaths 312. 14 deaths occurred from small-pox, 32 from typhus.

465; 4. WIGAN; *Hindley*.—Births 268; Deaths 189. Scarlatina caused 26 deaths, typhus 21.

466; 4. WARRINGTON; *Warrington*.—Births 310; Deaths 196. Small-pox was fatal in 18 cases.

466; 6. WARRINGTON; *Rixton*.—Births 16; Deaths 14. There has been an increase in the deaths during the quarter, owing to small-pox being prevalent.

468; 7. BOLTON; *Turton*.—Births 44; Deaths 34. I have registered the death of a female this quarter who was 105 years of age.

468; 8. BOLTON; *Edgworth*.—Births 16; Deaths 20. The deaths are above the average. I have registered 10 deaths from scarlatina, and one from small-pox.

468; 11. BOLTON; *Eastern*.—Births 255; Deaths 169. The births are 11 below the average of the five previous years, and 4 less than in the corresponding quarter of last year. Deaths 23 below the average of the same period, and 25 less than in the corresponding quarter of last year. The decrease is probably attributable to movement of the population in consequence of the present lack of employment caused by the cotton famine, and the consequent depression in other sources of employment. The number of deaths from small-pox is unprecedented in my district, 17 having occurred from that cause; 34 were from bronchitis, and 11 from scarlatina.

471; 3. CHORLTON; *Chorlton-upon-Medlock*.—Births 411; Deaths 267. The deaths are about an average, and less than those of the corresponding quarter last year. No epidemic has prevailed. The most fatal diseases have been bronchitis, of which 48 cases were registered, phthisis 31, and pneumonia 19. There were also 4 fatal cases of small-pox. There is a marked improvement in infantile life, the deaths under 5 years of age amounting but to 82, the average two or three years ago having been one half of the total number.

471; 4. CHORLTON; *Hulme*.—Births 775; Deaths 508. The deaths during the past quarter have been above the average, which I think may be attributed to the severe weather we have had, and which has had its effect in the number of deaths caused by diseases of the respiratory organs, viz., 198. I have registered 6 from small-pox. The district now seems to be free from this complaint, the last death from it having been registered in February.

473; 2. MANCHESTER; *Deansgate*.—Births 244; Deaths 221. Small-pox was fatal in 10 cases, fever in 11. Not a single death occurred from scarlatina.

473; 7. MANCHESTER; *Cheetham*.—Births 209; Deaths 231. The deaths are above the average, owing to the great mortality in the workhouse, Crumpsall; 119 deaths were registered as having occurred in that house, and 63 of that number were from measles. Many of those cases were complicated with pneumonia, bronchitis, croup, and ulceration of the throat.

475; 1. OLDHAM; *Oldham-below-Town*.—Births 420; Deaths 409. The town is in a healthy state, although this quarter we have more deaths than usual from measles. The number from this complaint is 42.

475; 6. OLDHAM; *Crompton*.—Births 60; Deaths 50. There has been much sickness during the last quarter from measles, small-pox, and scarlatina. 8 deaths were from the latter disease.

476; 2. ROCHDALE; *Butterworth Lordshipside*.—Births 30; Deaths 32. The deaths are above the average; 9 from scarlatina.

476; 6. ROCHDALE; *Spotland Furtherside*.—Births 54; Deaths 46. During the past quarter I have registered 19 deaths from scarlatina.

476; 10. ROCHDALE; *Whitworth*.—Births 109; Deaths 116. Deaths considerably above the average. 30 occurred from scarlatina, which still prevails.

477; 1. HASLINGDEN; *Newchurch*.—Births 218; Deaths 186. The deaths are above the average of the corresponding quarters of four previous years. Scarlatina continues prevalent in my district; I have registered 38 deaths from it.

477; 4. HASLINGDEN; *Haslingden*.—Births 92; Deaths 73. 13 deaths occurred from scarlatina.

477; 5. HASLINGDEN; *Accrington*.—Births 200; Deaths 166. The deaths are 57 above the average of corresponding quarters of four previous years. Scarlatina was fatal in 44 cases.

480; 2. BLACKBURN; *Harwood*.—Births 111; Deaths 93. Deaths above the average, 26 from scarlatina.

480; 4. BLACKBURN; *Blackburn*.—Births 708; Deaths 550. The deaths are about 05 above the average of the four preceding March quarters; there were about 36 from scarlatina.

480; 5. BLACKBURN; *Oswaldtwisle*.—Births 130; Deaths 95. The deaths are 14 above the average; scarlatina has been prevalent amongst children, which fact accounts for the increase.

480; 7. BLACKBURN; *Witton*.—Births 89; Deaths 78. The deaths 28 over the average of the last five corresponding quarters. Scarlatina has been very prevalent, and was fatal in 10 cases.

482; 2. PRESTON; *Preston*.—Births 842; Deaths 750. The deaths are 92 more than those of the corresponding quarter of last year, and 99 more than the average for the last five corresponding quarters. The following diseases have been amongst the most fatal: bronchitis caused 111 deaths, scarlatina 94, phthisis 86, pneumonia 36, diarrhoea 21, typhus and typhoid fever 17, fever (not specified) 19, croup 15, diphtheria 4. 334 children died at and under five years of age. The severe weather in January and February caused the deaths of very many old people. For the week ending February 18th there were 68 deaths, but in the corresponding week of the last year there were only 30. Scarlatina has been prevalent this quarter.

## IX. YORKSHIRE.

### 35. WEST RIDING.

492c; 1. WETHERBY; *Wetherby*.—Births 35; Deaths 52. The extreme cold of the winter and want of proper sanitary arrangements have caused the increase of deaths.

495; 2. TODMORDEN; *Todmorden*.—Births 142; Deaths 152. The deaths are 38 above the average. Scarlatina still prevails, though to a less extent; 29 deaths were from that cause in the quarter.

497; 10. HUDDERSFIELD; *Lockwood*.—Births 95; Deaths 78. Deaths above the average. Much scarlatina amongst children; and many deaths occurred from that cause.

497; 11. HUDDERSFIELD; *Golcar*.—Births 151; Deaths 120. There have been 30 deaths from scarlatina.

498; 4. HALIFAX; *Halifax*.—Births 344; Deaths 282. The return shows an increase of 18 deaths above the average for the corresponding quarter of four previous years. 40 fatal cases of scarlatina were recorded.

498; 7. HALIFAX; *Sowerby*.—Births 143; Deaths 120. Deaths above the average. Measles and scarlatina prevalent.

498; 10. HALIFAX; *Northowram*.—Births 210; Deaths 137. Scarlatina caused 25 deaths.

499; 5. BRADFORD; *East*.—Births 366; Deaths 228. Deaths 23 above the average of the last five years. 19 from scarlatina.

499; 6. BRADFORD; *West*.—Births 230; Deaths 172. Scarlatina was returned in 18 cases.

499; 10. BRADFORD; *Shipley*.—Births 108; Deaths 69. 11 deaths occurred from scarlatina.

500b; 1. HUNSLET; *Hunslet*.—Births 400; Deaths 261. There were 18 deaths from scarlatina.

504c; 2. CASTLEFORD; *Kippax*.—Births 123; Deaths 102. The excess of deaths is caused by measles and scarlatina.

507; 4. ECCLESALL BIERLOW; *Ecclesall Bierlow*.—Births 413; Deaths 272. During the quarter 25 deaths have taken place from scarlatina, and 4 from small-pox. There have also been 33 deaths from bronchitis, 26 from phthisis, and 25 from pneumonia.

508; 5. SHEFFIELD; *Brightside*.—Births 448; Deaths 261. The births are 84 and the deaths 60 above their respective averages of the five previous corresponding quarters. From the table subjoined it will be seen that there has been great mortality among the very young and the aged. The prevalence of bronchitis and pneumonia may be attributed to the long and severe winter. Considering the population, the district may be said to be comparatively free from diseases of an epidemic character.

### 36. EAST RIDING (with York).

515; 1. YORK; *Skelton*.—Births 13; Deaths 16. The health of this district has for the last quarter been bad, and the mortality has greatly exceeded the average. Scarlatina, chiefly amongst children, proved fatal in 10 cases. Several letters have appeared in the local newspapers calling attention to the imperfect drainage of a part of the district, the village of Haxby, where the fever was most fatal. No sanitary measures have been taken by the local authorities that I am aware of, but the fever appears to be gradually wearing itself out.

### 37. NORTH RIDING.

525; 2. SCARBOROUGH; *Scarborough*.—Births 228; Deaths 125. The births show an increase of 44, whilst the deaths show a decrease of 6, when compared with the average of the four preceding corresponding quarters; a very gratifying indication of the sanitary state of the district, when the rapid increase in the population of Scarborough and of the

adjoining township of Falsgrave is considered. It will be perceived from the statement below that small-pox is still prevalent in the district, but to a much less extent than in the previous quarter. Deaths from phthisis 13; bronchitis 15; small-pox 10.

526; 1. MALTON; *Rillington*.—Births 37; Deaths 29. Whooping-cough, scarlatina, small-pox, and typhus have prevailed in different localities. West Heslerton used to be a most healthy village until it was drained last year; but it has never been free from fever since. The drain terminated in a walled receptacle at the end of the village, which was entirely closed at the top, thus throwing poisonous gases into the houses at every back door. As medical officer I made my protest against this arrangement to the surveyors of the place as well as the Board of Guardians, who were pleased to return me their thanks, but with the exception of opening the top of the reservoir nothing has been done. At a slight expense the work might be carried into a field about 300 yards from the spot, and the village thus cleared from what has proved a heavy scourge to its inhabitants.

526; 5. MALTON; *Bulmer*.—Births 23; Deaths 15. With the exception of typhus (fatal in 5 cases) having made its appearance in different parts of the district, the general health has been better during the season than in some years past, which probably may be due to sanitary improvements, the mildness of the season, and an average demand for labour, by which workpeople have been able to secure those comforts for their families that are so essential to health at this period of the year.

## X. NORTHERN COUNTIES.

### 38. DURHAM.

541a; 1. STOCKTON; *Yarm*.—Births 378; Deaths 236. 21 deaths occurred from measles.

546; 1. EASINGTON; *Easington*.—Births 313; Deaths 199. Deaths considerably above the average, caused chiefly by diseases incidental to children. 11 deaths occurred from small-pox. Measles, scarlatina, and whooping-cough have all been prevalent.

547; 2. HOUGHTON-LE-SPRING; *Hetton-le-Hole*.—Births 147; Deaths 103. The deaths are 24 over the average. Measles has been very prevalent, and there have been 20 deaths from that cause. The complaint is now much abated. The weather has been very severe, which I suppose must have been partly the cause of so much illness.

548; 1. CHESTER-LE-STREET; *Chester-le-Street*.—Births 195; Deaths 121. The weather during the quarter has been of a very unfavourable kind; biting cold weather and strong gales of wind from the N.E., which have had a fatal effect on enfeebled constitutions. Small-pox has been prevalent, and 10 deaths occurred from it. There is great want of cleanliness amongst the mining population. Work is plentiful and remunerative.

### 39. NORTHUMBERLAND.

553; 6. TYNEMOUTH; *Blyth*.—Births 170; Deaths 97. 6 deaths occurred from small-pox.

559; 1. ALNWICK; *Warkworth*.—Births 71; Deaths 41. There is an increase of deaths from scarlatina. At Radcliff colliery in the township of Hauxley, the drainage is ineffective, and the water bad.

### 40. CUMBERLAND.

568; 3. CARLISLE; *St. Mary*.—Births 155; Deaths 144. I registered 7 deaths from small-pox (not any of the sufferers having ever been vaccinated), 8 from typhus, and 3 from diphtheria.

568; 6. CARLISLE; *Dalston*.—Births 30; Deaths 24. The deaths are above the average. Small-pox and typhus have been and still are very prevalent; one death has been registered from small-pox, and 2 from scarlatina.

569; 1. WIGTON; *Wigton*.—Births 85; Deaths 68. Typhus prevailed, but mostly in the rural district, very little in the town. With typhoid fever it caused 10 deaths. Small-pox was mostly in the town, imported from Carlisle at three different times.

570; 2. COCKERMOUTH; *Cockermouth*.—Births 100; Deaths 82. The deaths are above the average of corresponding quarters. Small-pox is and has been very prevalent in all parts of the town of Cockermouth, and there a great many cases at the present time, but not many likely to be fatal. Fever also has been prevalent. Small-pox caused 4 deaths (all in persons not vaccinated).

571; 2. WHITEHAVEN; *Whitehaven*.—Births 107; Deaths 154. On the 8th February of the present year I reported to you the outbreak of small-pox and fever, both of which continue in this district, and are very fatal, particularly the former. I have registered during the quarter 36 deaths from small-pox, and 20 from fever.

571; 3. WHITEHAVEN; *St. Bees*.—Births 88; Deaths 99. Deaths from small-pox 11. Small-pox continues to be prevalent in my district, especially in parts adjoining Whitehaven, being a large portion of the township of Preston quarter.

## XI. MONMOUTHSHIRE AND WALES.

### 42. MONMOUTHSHIRE.

579; 1. PONTYPOOL; *Pontypool*.—Births 289; Deaths 235. 33 deaths from small-pox and 13 from typhus were registered.

580; 2. NEWPORT; *Newport*.—Births 290; Deaths 213. The greater number of deaths has been from bronchitis and diseases of the chest. Scarlatina and measles have not yet ceased, and 12 fatal cases of small-pox have occurred.

### 43. SOUTH WALES.

581a; 2. CARDIFF; *Cardiff*.—Births 520; Deaths 438. I attribute the increase of deaths in this quarter to the prevalence of small-pox and measles, and also to the continued severity of the weather, causing an excess in cases of bronchitis, pneumonia, and phthisis. 55 deaths were caused by small-pox; 31 by measles; 20 by scarlatina.

581b; 2. PONTYPRIDD; *Llantrisant*.—Births 116; Deaths 128. The deaths are much above the average, and double the number in the same quarter of last year. Scarlatina and small-pox very prevalent in the sub-district. 53 cases of scarlatina are recorded.

582; 1. MERTHYR TYDFIL; *Gelligaer*.—Births 67; Deaths 67. 10 deaths from small-pox.

582; 2. MERTHYR TYDFIL; *Lower*.—Births 232; Deaths 303. The deaths far exceed the average. From scarlatina 32 deaths; measles 37; small-pox 11; fever (including typhus and typhoid) 20.

582; 4. MERTHYR TYDFIL; *Aberdare*. — Births 412; Deaths 371. The deaths considerably above the average, partly owing to increase of population, and partly to the prevalence of small-pox and scarlatina. 75 deaths were from the former, and 35 from the latter complaint.

584; 1. NEATH; *Margam*. — Births 205; Deaths 131. 9 deaths were from small-pox; 21 from scarlatina; 6 from measles.

584; 2. NEATH; *Neath*. — Births 183; Deaths 203. This return is very heavy, owing to the great mortality from small-pox, measles, and scarlatina, especially the first named, which was fatal in 56 cases; measles in 31.

585a; 2. SWANSEA; *Llangafelach*. — Births 195; Deaths 143. There were 38 deaths from scarlatina.

585a; 3. SWANSEA; *Swansea*. — Births 334; Deaths 238. Deaths are above the average. 15 deaths occurred from scarlatina, 9 from small-pox, and 40 from bronchitis.

586; 2. LLANELLY; *Llanelly*. — Births 172; Deaths 154. The number of deaths is unprecedentedly large, being nearly double the average of corresponding quarters, attributable to the long and severe winter, also to the prevalence, during the early part of the quarter, of scarlatina and measles; 45 deaths having occurred from those diseases.

587; 3. LLANDOVERY; *Llansadwrn*. — Births 9; Deaths 6. All the deaths were from scarlatina, which is, in my opinion, owing to its being epidemic.

589; 2. CARMARTHEN; *St. Clears*. — Births 47; Deaths 56. Scarlatina, bronchitis, and phthisis have been the cause of many deaths.

591; 1. PEMBROKE; *Tenby*. — Births 64; Deaths 58. The mortality is high. 14 deaths from scarlatina.

592; 4. HAVERFORDWEST; *Fishguard*. — Births 36; Deaths 75. Scarlatina in January and February proved fatal in 23 cases; and a great deal of sickness has prevailed.

603; 3. PRESTEIGNE; *Kington*. — Births 57; Deaths 53. 4 cases of small-pox and 2 of typhoid fever have been registered. Both diseases very prevalent.

#### 44. NORTH WALES.

608; 2. MONTGOMERY; *Chirbury*. — Births 38; Deaths 52. The deaths are 13 above the average of corresponding quarters in 7 years. Scarlatina and small-pox have been very prevalent, and still continue; 12 deaths have been registered from the former, and 2 from the latter.

610; 3. HOLYWELL; *Flint*. — Births 78; Deaths 58. About 40 persons have had small-pox; some of them above 50 years of age; most of them over 20 years. Only one death from the disease.

611; 1. WREXHAM; *Hope*. — Births 133; Deaths 95. The deaths are much above the average, in great measure from the severity of the winter. 9 were from small-pox.

611; 4. WREXHAM; *Wrexham*. — Births 205; Deaths 187. Deaths above the average; 20 from small-pox, which continues in the town and in the district round. A great number of people of all ages have been vaccinated since the disease has visited the district.

618; 2. FESTINIOG; *Festiniog*. — Births 111; Deaths 80. 5 deaths from small-pox.

[The following Index furnishes a reference to the *Number* of each DISTRICT in the Tables of Marriages, Births, and Deaths contained in this Return: Any District in the Registrars' Notes may be found in the same manner. In forming the alphabetical arrangement, the principle adopted has been to place compound names in the order in which they are pronounced.]

QUARTERLY RETURN  
OF  
THE MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF  
ENGLAND.

By Authority of the Registrar General.

PUBLISHED BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 66.] *Marriages, Jan., Feb., March, 1865.* [Price 4d.  
*Births and Deaths, April, May, June, 1865.*

General Register Office, Somerset House,  
31st July 1865.

THE UNITED KINGDOM.

THE REGISTERED Births in the second quarter of the year were 262,367; and the registered deaths 157,485. The estimated population in 1865 of England, Scotland, and Ireland is 29,772,294.

ENGLAND.

This Return comprises the BIRTHS and DEATHS registered by 2200 Registrars in all the districts of England during the spring quarter that ended on June 30th, 1865; and the MARRIAGES in 12765 churches or chapels, about 5207 registered places of worship unconnected with the Established Church, and 641 Superintendent Registrars' offices, in the quarter that ended on March 31st, 1865.

Marriages were numerous in the first three months of the present year, chiefly in consequence of increased activity in the manufactures and other industry of the

northern populations ; the birth-rate in the second quarter was high, as it has been in every quarter since the summer of 1863 ; and the death-rate was above the average, for while the southern parts of the country were remarkably healthy, the mortality was high in Wales, and it was not low in some northern counties.

MARRIAGES.

Of weddings the number in the March quarter was 36,835 ; the daily average was 409. As it is the season in which employment is the slackest, it is also that invariably in which marriages are the fewest. There were 6380 marriages in London. The four most populous districts of the metropolis are Pancras with about two hundred thousand persons, Kensington, Lambeth, and Marylebone. In Kensington there were 469 marriages ; in Pancras with its larger population 452 ; in Marylebone almost the same number, though it contains fewer persons than Pancras by upwards of 30,000 ; in Lambeth the number was very great, for it rose to 482, the highest returned by the London districts, though its population scarcely exceeds that of Marylebone, and is much less than those of Pancras and Kensington.

The annual marriage-rate in the quarter, viz., proportion per cent. of persons married to population, was 1·428, the average of ten corresponding quarters, 1855-64, being 1·381. In 1864 (winter quarter) the rate was 1·472.

BIRTHS.

The number of children born in the three months ending 30th June was 192,921, against 188,641 in the same period of last year. In London the births were 26,408 against 25,014 ; in Lancashire they were 25,635 against 25,467. The counties of Durham and Northumberland exhibit a marked increase. The former with a population in 1861 of 542,125 persons returns 7111 births ; South Wales containing 699,722 persons in 1861 returns not more than 7182.

TABLE II.—Annual Rates per Cent. of Persons Married, of Births and Deaths, in the Years 1855-65, and in the Quarters of those Years.

September - -	1·844	1·896	2·068	1·997	2·097	1·718	1·994	1·800	2·169	2·139	1·972	—
December - -	2·036	1·997	2·269	2·406	2·195	2·043	2·064	2·230	2·213	2·349	2·180	—

The Table may be read thus, without reference to the decimal points :—In the year 1855 to 100,000 of the population of England there were 1616 persons married, 3373 births, 2261 deaths registered.—The annual rates of marriage in each of the four quarters were 1·262, 1·644, 1·570, and 1·976 per cent. ; the rates of death 2·910, 2·272, 1·844, and 2·036 per cent. In reading the population on the first line add 3 ciphers (000). The three months January, February, March, contain 90, in leap year 91 days ; the three months April, May, June, 91 days ; each of the last 2 quarters of the year 92 days. For this inequality a correction has been made in the calculation.

The annual birth-rate in the quarter was 3·691 per cent. against an average of 3·603 in ten previous June quarters. Within this range of comparison it rose in only one instance as high as 3·700. In London the birth-rate was 3·515; in the city of Manchester 3·624; in the borough of Liverpool it was as high as 4·173; in that of Leeds 4·497; and in Glasgow it rose to 4·604.

## INCREASE OF POPULATION.

The registers of births record, as has been mentioned, a total of 192,921; the deaths in the same three months are 116,006. The excess of the former over the latter is 76,915, and represents the natural increase of population, which averaged 845 daily.

From ports in the United Kingdom where there are Government Emigration Officers there went out in the June quarter 71,087 emigrants,\* of whom 52,730 were destined for the United States, 6943 for British North America, 9820 for the Australian colonies, and 1594 for other parts of the world. More than a fourth part of the emigration consisted of persons of English origin; but the number of Irish emigrants was double that of English, and all the former, except a few thousands, went to the United States. The Scotch who left their native country were about 4,600. The emigration to the United States was not quite equal to

† From the Return of the Corn Department, Board of Trade.

‡ Deduced from the Weekly Tables published in the *Economist*. The average of the highest and of the lowest weekly prices is here shown in cols. 3, 4, and 5, and not the absolute highest or lowest price quoted at any period of the quarter.

§ Deduced from the Returns of the Poor Law Board. The returns now relate to 655 Unions, &c., comprising a population of 19,885,921 (in 1861), and do not include the paupers of parishes, &c. incorporated under Gilbert's Act, or still under the 43rd Elizabeth. Lunatic Paupers in Asylums and Vagrants relieved in the above Unions are also excluded; they amounted on January 1st, 1864, to—Insane Persons, 21,418; Vagrants, 3,138. The rest of the paupers on that day amounted to 987,197.

\* Return with which the Registrar General has been favoured by the Emigration Commissioners: Of 71,087 emigrants the origin was undistinguished in 1449 cases which have been distributed by calculation.

that of the same quarter in either of the two preceding years ; and the numbers who went to other destinations also showed a decrease.

**PRICES, PAUPERISM, AND THE WEATHER.**

The average price of wheat was 40s. 6d. per quarter ; a shilling higher than it was in the June quarter of last year, but 6s. less than it was in the same period of 1863. Beef by the carcase at Newgate and Leadenhall Markets was on an average 5¼d. per lb., and was a halfpenny dearer than in the two previous June quarters. Mutton was 7⅜d. per lb. ; it was 1¼d. dearer than in the same period of 1864, and nearly 2d. dearer than in that of 1863. The average price of best potatoes at the Waterside Market, Southwark, was 102s. 6d. per ton, being about double the price of the June quarter of 1864, but less than that of 1863.

The average number of paupers relieved in-door was 125,846, which is rather more than in the spring of last year, less than in that of 1863 ; the number relieved out-door was 776,016, exhibiting a small decrease on the pauperism of 1864, and a very great decrease on that of the previous year, when the number of persons who received relief was greater than in the present year by 100,000.

In his summary of results derived from the copious meteorological details that have been compiled with much care, and are appended to this Report, Mr. Glaisher writes that the unusually severe weather of March interrupted agricultural operations and checked vegetation ; on 5th April this wintry weather ceased suddenly ; and till 10th June, during a period of sixty-seven days, the temperature was, with few exceptions, above the average, the average daily excess being nearly five degrees ; and the quarter was closed by a period of twenty days in which intervals of cold and warm weather succeeded each other, but with a predominance of cold. The high summer temperature of April urged vegetation to rapid growth, and soon effaced the traces of a backward season. Rain, which had been much needed, fell early in May, and in the second week of that month over the whole of the British islands. The mean temperature was above the average in each month, remarkably above it in April and May. The mean temperature of the quarter was 56·2 at Greenwich ; and there is no record of any previous instance in which it was so high in the same period of the year. There was 7·2 in. of rain. The fall was deficient in April ; above the average in May and June. The air was unusually dry ; for though there was a great deal of rain in May, it fell in showers which were heavy, but of short duration.

**DEATHS ; AND THE STATE OF THE PUBLIC HEALTH.**

The total number of deaths in the quarter that ended 30th June was 116,006 against 118,121 and 116,899 in the same three months of 1863 and 1864 respectively. The returns of London in the last three springs discover, as regards absolute numbers, a near approach to identity ; but those of the kingdom generally show a decrease in last quarter, Wales, and some northern parts of England, where

epidemic diseases have been rife, or active industrial operations have attracted population, being the only important exceptions. The singularly fine weather has exercised a beneficial influence on the public health; and the effect would doubtless have been more marked in the death registers if the preceding March had been less cold and ungenial. The winter months, and especially March, were as remarkable for cold as the late spring season was for heat; and many bronchial affections, which the former period transmitted, ran their course to a fatal termination after the propitious change of weather had begun. The following counties may be mentioned amongst those which exhibit a decrease of deaths in the present returns: Hampshire, Berkshire, Hertfordshire, Oxfordshire, Huntingdonshire, Cambridgeshire, Suffolk, Wiltshire, Cornwall, Staffordshire, Worcestershire, Warwickshire, Leicestershire, Rutlandshire, Cheshire, the East and North Ridings of Yorkshire, Cumberland, and Westmorland. In Lancashire the deaths in the spring quarter of 1863 and 1864 were 16,541 and 16,415; in last quarter 16,806. In the West Riding of Yorkshire they were in the same periods 10,469, 9991, and 10,431. In South Wales they were 3871; 4056; 4779.

In England the annual rate of mortality for the June quarter was 2.220 per cent. (deaths to a hundred persons living) against an average of 2.191 for the corresponding quarter in ten previous years. In 1863 and 1864 the rate was 2.308 and 2.260 per cent.

The South-eastern Division, embracing Surrey, Kent, Sussex, Hampshire, and Berkshire, was the most healthy; for in it the rate of mortality was only 1.882 per cent. The next in degree of health was that which contains the South Midland Counties, where the mortality was 2.002. In four other divisions, viz. the Eastern, South Western, West Midland, and North Midland Counties, it did not rise as high as 2.1 per cent. In the North-western Counties (Cheshire and Lancashire), in Yorkshire, and Wales, it was but little under 2.5 per cent. The Registrars of Welsh districts report measles, scarlatina, and small-pox as diseases that had prevailed in the quarter. In Llantrisant, of 122 deaths 27 were from measles, 20 from scarlatina, and 16 from small-pox; in the Lower sub-district of Merthyr Tydfil in 200 deaths from all causes 31 were from scarlatina; in Aberdare, another sub-district of Merthyr Tydfil, 28 cases of small-pox were fatal; in the town of Swansea there were 19 deaths from small-pox, and 23 from measles, out of 251 from all causes; scarlatina had been very prevalent in Brecknock; and in Wrexham nearly a fourth part of the deaths was from measles. Newport in Monmouthshire had been attacked by small-pox in a malignant form; and the same disease had been prevalent and fatal in the Whitehaven district, at Gravesend, Hastings, Swindon, Calne, St. Ives, and Bath. Measles was fatal in Manchester, Wigan, and Oldham; and in the sub-district of Mount Pleasant, Liverpool, out of 850 deaths, 207 were from typhus, 26 from small-pox, and 26 from measles. In Farnham, Surrey, 24 out of 87 deaths were from scarlatina.

Note.—The three months January, February, March, contain 90, in leap year, 91 days; the three months April, May, June, 91 days; each of the last two quarters of the year, 92 days. For this inequality a correction has been made in the calculations, also for the difference between 365 and 365.25 days, and 366 and 366.25 days in leap year.

In London the total number of deaths was 17,367. The annual rate of mortality for the quarter was 2·316 per cent. In the town of Leeds it was 2·714; in that of Liverpool it was 3·125; in Dublin it was 2·368; in Edinburgh 2·639; in Glasgow 3·065. Of ten large towns in the United Kingdom Birmingham shows the lowest mortality for last spring; and Bristol in the same Table stands in a position not much less favourable.

In the deaths from scarlatina in London there was a decided decrease; they were 385, which is much less than in any June quarter since 1861; in the December quarter of last year they were 1095. It is satisfactory that typhus has not increased recently, although the decrease is not considerable. In the last quarter of 1864 the deaths from it were 1064; in the first two quarters of the present year they were 936 and 700. There were 738 deaths in London from diarrhœa and summer cholera. This complaint, which is commonly so fatal to young children in a more advanced period of the year, appears to have been forced into earlier developement by the unusual heat of the season; for in the spring quarter of 1863 and 1864 the numbers referred to it were only 232 and 334. Thus in the present year the previous number has been more than doubled. It is possible that other unusual conditions besides temperature have tended to produce this result; but in present darkness on the nature of those conditions, the fact itself is important, and cannot safely be overlooked, at a time when malignant cholera prevails in a part of Egypt which is in frequent and direct communication with English ports. The same precautionary measures, that are the best preparation against the threatened attack, are also the most useful to repress, if not extirpate, those marauding bands of diseases that always infest within the frontiers, and are not the less dangerous because they excite less alarm by sudden and violent outbreaks. An abundant supply of water is a first necessity for this purpose; and the inhabitants of a town should not be obliged "to fetch it from a distance," which the Registrar of Hindley in the Wigan district complains that the people there find it necessary to do, though it is a place where collieries and ironworks are in operation.

In cholera epidemics of past years the seaports of Northumberland and Durham have suffered early and severely. The following reports up to the end of June from the former county are therefore satisfactory:—

NEWCASTLE-ON-TYNE; *All Saints*.—Births 325; Deaths 163. The births are above and the deaths below the average, affording a satisfactory proof of the healthy condition of my district, comprising the parishes of All Saints, Christ Church, and St. Anne, with a population of upwards of 27,000. The lower part of the town, especially in the neighbourhood of Sandgate and Pandon Dene, inhabited by the hard-working and industrious poor, is at present remarkably healthy. There has not been one death from typhoid fever or typhus during the last three months.

TYNEMOUTH; *Wallsend*.—Births 118; Deaths 24. The number of births is considerably above the average, in consequence of the very great increase of population caused by the great demand for labour at the new ship building yards and chemical factories. The number of deaths is very small. I never knew the district in a more healthy condition. The sanitary arrangements at Wilington quay are very much improved.

\* The Registration Counties consist of groups of entire Registration Districts ; which Districts are, in general, identical with the Poor Law Unions. As the principle adopted has been to place a District or Union which extends into more than one County with the County in which either the principal town or the greater part of the population is located, the limits of the Registration Counties differ more or less from the boundaries of the counties proper.

MARRIAGES Registered in the Quarters ending 31st March 1863 — 1865 ; BIRTHS and DEATHS Registered in the Quarters ending 30th June 1863 — 1865 ; in the DIVISIONS, REGISTRATION COUNTIES, and DISTRICTS of ENGLAND—continued.

\* The union of Pontypridd, consisting of parishes taken from the districts of Cardiff (581<sup>a</sup>) and Merthyr Tydfil (582), was formed on 18th July 1863.

† The number of districts is increased to 641 by the formation of the following 18 new districts: Mile End Old Town (24<sup>b</sup>), Dulverton (313<sup>b</sup>), Whitechurch, Salop (363<sup>b</sup>), Birkenhead (460<sup>b</sup>), Great Ouseburn (492<sup>a</sup>), Wetherby (492<sup>c</sup>), Kirkdeighton (492<sup>a</sup>), Wharfedale (493<sup>b</sup>), Kirkstall (500<sup>a</sup>), Holbeck (500<sup>c</sup>), Bramley (500<sup>a</sup>), Hemsley (504<sup>b</sup>), Castleford (504<sup>c</sup>), Brannham (514<sup>b</sup>), Hartlepool (541<sup>b</sup>), Bedwelty (578<sup>b</sup>), Pontypridd (581<sup>b</sup>), and Gower (585<sup>b</sup>).

*Remarks on the Weather, during the Quarter ending 30th of June 1865. By JAMES GLAISHER, ESQ., F.R.S., &c., Secretary of the British Meteorological Society.*

THE weather in the month of March was of unusual severity for the season, agricultural operations were very much interrupted, and vegetation had made but little progress. On 5th April a sudden change from wintry weather took place, and from this time till 10th June, a period of 67 days, the temperature, with few exceptions of short duration, was above the average, and at times to considerable amounts, the average daily excess of temperature for these 67 days was more than  $4\frac{1}{2}^{\circ}$ ; from 11th June, a period of a few days cold and a few days warm alternately set in, the former somewhat preponderating, the daily deficiency for this period of 20 days averaging less than  $\frac{1}{2}^{\circ}$ . The sudden change from the low winter temperature on 4th April to high summer temperature at the middle of April caused vegetation to revive very rapidly, and towards the end of the month the very warm temperature stimulated vegetation to a very rapid growth, and effaced every trace of the backward winter season. The fall of rain was small, the sky was mostly clear, and pastures and green crops greatly needed rain. At the beginning of May rain fell, in the second week over the whole of the British Islands, and vegetation improved wonderfully; at the end of the month the corn crops were considered fully a fortnight in advance of last year in the corresponding period. In June there were some heavy thunderstorms, and heavy rain fell at different parts of the country; haymaking proceeded satisfactorily. At the end of the quarter the harvest reports represented wheat as promising on heavy soils, while on light soils it is said to be short in quantity; oats in many places have failed; barley looked well but needed rain; the potato crop continued healthy, but root crops generally were suffering from the want of rain.

The average temperature of these three months was as high as  $56\frac{1}{4}^{\circ}$ , and there is no instance on record of such a high temperature. The nearest approaches to this value were  $55^{\circ}\cdot 5$  in 1775,  $55^{\circ}\cdot 1$  in 1844,  $55^{\circ}\cdot 7$  in 1846, and  $55^{\circ}\cdot 3$  in 1848.

The degree of humidity of the air in these months was not less remarkable; the air was always dry, the rain fell in heavy showers and in short times, and the air was upon the average 5 parts out of 100 drier than usual.

Notwithstanding the high temperatures, &c. there has not been a single meteorological choleraic symptom shown; there has been no blue mist, the air has been in very general motion, and I have seen none of those conditions so usual during the prevalence of cholera, and there have been none up to the time of writing this, viz., 17th July.

*The mean temperature of April* was  $52^{\circ}\cdot 3$ , being  $5^{\circ}\cdot 7$  above the average of the preceding 24 years, and  $4^{\circ}\cdot 1$  above that in 1864.

*The mean temperature of May* was  $56^{\circ}\cdot 1$ , being  $3^{\circ}\cdot 3$  above the average of the preceding 24 years, and  $2^{\circ}\cdot 3$  above that in 1864.

*The mean temperature of June* was  $60^{\circ}\cdot 2$ , being  $1^{\circ}\cdot 2$  above the average of the preceding 24 years, and  $2^{\circ}\cdot 8$  above that of last year.

The temperature in April was remarkable indeed; there is no instance on record of one so warm; the nearest approach to this high temperature was in 1844, when it was  $51^{\circ}\cdot 7$ ; the next was in 1821, viz.,  $50^{\circ}\cdot 4$ ; and the only other instance, back to 1771, in which the mean temperature exceeded  $50^{\circ}$ , viz.,  $50^{\circ}\cdot 7$ , was in the year 1779.

The temperature in May was also remarkable, as we have to go back 17 years to find one so warm, viz., in the year 1848; but there are ten other instances, going back to 1771, in which the temperature of this month has exceeded  $56^{\circ}$ .

The usual increase in the mean temperature from March to April is about  $5^{\circ}$ . In this year, at stations south of lat.  $53^{\circ}$ , April was from  $12^{\circ}$  to  $17^{\circ}$  warmer than March; and at stations north of  $53^{\circ}$  the increase was from  $8^{\circ}$  to  $10^{\circ}$ . This great increase is very remarkable.

*The mean high day temperatures* were above their averages to the amounts of  $9^{\circ}\cdot 3$ ,  $3^{\circ}\cdot 4$ , and  $2^{\circ}\cdot 7$  respectively.

*The mean low night temperatures* were above their averages in April and May to the amounts of  $2^{\circ}\cdot 7$  and  $2^{\circ}\cdot 1$  respectively, and below it in June to the amount  $0^{\circ}\cdot 2$ .

Therefore the day temperatures throughout the quarter have been above their averages, particularly in the month of April; and the night temperatures in April and May were also above their averages, but to much less amounts than the day excesses. In June the night temperatures were slightly colder than usual.

The daily range of temperature in April averaged  $25^{\circ}$  nearly, being nearly  $7^{\circ}$  greater than the average.

*The fall of rain* in April was very small; in May it was large, viz.,  $4\frac{1}{4}$  inches, being greater in amount than any collected in May, as far back as the year 1824, when the same amount was collected, which has only been exceeded on one occasion since the year 1815, viz., in 1817, when the rain-fall was as large as 4.6 inches. In June a little more than the average fell, but it fell heavily and nearly altogether. There were 26 dry, consecutive days, in this month without rain.

The mean temperature of the air at Greenwich in the three months ending May, constituting the three spring months, was  $48^{\circ}\cdot 3$ , being  $1^{\circ}\cdot 9$  above the average of the preceding 94 years.

NOTE.—In reading this table it will be borne in mind that the sign (—) minus signifies below the average, and that the sign (+) plus signifies above the average.

Thunder storms occurred or thunder was heard and lightning was seen on 9th April at Banbury Belvoir, and Grantham; on the 11th at Guernsey and Wakefield; on the 12th at Llandudno, Castleton and York; on the 13th at North Shields; on the 16th at Wakefield; on the 17th at Liverpool and Stonyhurst. On 5th May at Wisbeach, Wakefield, Stonyhurst, and York; on the 7th at Brighton; on the 8th at Guernsey and Camden Town; on the 9th at Osborne, Little Brighton, Wilton, Aldershot, Bath, Clifton, Streatley, Oxford, Great Berkhamstead, Royston, Abington, Cardington, Norwich, and Wisbeach; on the 14th at Brighton; on the 21st at Guernsey, Camden Town, Hawarden, Kingsley, Penketh, Liverpool, Eccles, Castleton, Stonyhurst, Cockermouth, Silloth, and Miltown; on the 22d at Camden Town, Abington, Cardington, Bedford, Norwich, Grantham, Kingsley, Penketh, Manchester, York, Cockermouth, Allenheads, Carlisle, Bywell, and Culloden; on the 23d at Camden Town, Oxford, Great Berkhamstead, Aspley, Royston, Abington, Cardington, Bedford, Wisbeach, Llandudno, Hawarden, Penketh, Liverpool, Wakefield, Stonyhurst, Cockermouth, and Culloden; on the 24th at Allenheads; and on the 28th at Stonyhurst and York. On 3d June at Abington; on the 15th at Brighton, Marlborough, Streatley, Oxford, and Banbury; on the 29th at Wilton; and on the 30th at Silloth.

Thunder was heard but lightning was not seen on 12th April at Llandudno, Holkham, Stonyhurst, Cockermouth, and Allenheads; on the 13th at Eccles, Allenheads, and Bywell; on the 17th at Hawarden and Penketh; on the 18th at Aspley; and on the 27th at Guernsey. On 4th May at Norwich; on the 5th at Guernsey, Oxford, Abington, Llandudno, Grantham, and Penketh; on the 6th at North Shields; on the 9th at Aspley; on the 22d at Guernsey, Streatley, Oxford, Berkhamstead, Lampeter, Llandudno, Hawarden, Eccles, Castleton, Silloth, and North Shields; on the 23d at Streatley, Banbury, Grantham, Eccles, Castleton, and Silloth; on the 24th at Stonyhurst and Cockermouth; and on the 28th at Eccles. On 1st June at Guernsey and Brighton; on the 11th at Great Berkhamstead; on the 14th at Guernsey and Abington; on the 15th at Aspley, Cardington, Grantham, and Allenheads; on the 21st at Carlisle; on the 28th at Brighton; and on the 29th at Wilton.

Lightning was seen but thunder was not heard on 9th April at Oxford and Grantham; on the 12th at Wilton, Clifton, Oxford, and Stonyhurst; on the 13th at Cockermouth; on the 17th at Allenheads; on the 22d at Guernsey; and on the 27th at Stonyhurst. On 3d May at Guernsey and Norwich; on the 9th at Brighton; on the 20th at Aldershot; on the 21st at Brighton, Aldershot, Marlborough, Oxford, Banbury, Great Berkhamstead, Abington, Wakefield, Allenheads, Carlisle, and North Shields; on the 22d at Little Bridy; on the 28th at Cardington; and on the 29th at Brighton, Aldershot, Marlborough, and Aspley. On 1st and 2d June at Abington; and on the 28th at Guernsey and Clifton.

Solar halos were seen on 3d April at Brighton; on the 4th at Culloden; on the 6th at Oxford; on the 7th at Oxford; on the 10th at Liverpool; on the 12th at Brighton, Oxford, and Cardington; on the 13th at Oxford, Great Berkhamstead, and Grantham; on the 17th at Oxford; and on the

26th at Wisbeach and North Shields. On 2d and 3d May at Brighton; on the 4th at Clifton and Lampeter; on the 13th at Brighton, Clifton, and Great Berkhamstead; on the 15th, 16th, and 18th at Brighton; on the 19th at Brighton, Lampeter, and Grantham; on the 21st at Clifton; on the 22d and 24th at Oxford; and on the 31st at Brighton. On 1st June at Brighton; on the 6th at Clifton; on the 10th at Oxford; on the 11th at Abington and Cardington; on the 12th at Great Berkhamstead; on the 14th at Clifton; on the 15th at Oxford and Grantham; on the 23d at Clifton; on the 24th at Clifton and Grantham; on the 25th at Guernsey, Brighton, Clifton, and Oxford; and on the 26th at Oxford.

*Lunar halos* were seen on 4th April at Penketh, Liverpool, and Cockermouth; on the 5th at Wilton; on the 6th at Wilton, Oxford, Banbury, Aspley, Royston, Cardington, and Wisbeach; on the 7th at Wilton, Great Berkhamstead, Wisbeach, Penketh, Cockermouth, and North Shields; on the 8th at Liverpool; and on the 12th at Oxford and Cardington. On 1st May at Oxford, Penketh, and Eccles; on the 2d at Camden Town, Oxford, and Abington; on the 4th at Allenheads; on the 5th at Wisbeach; and on the 8th at Oxford, Great Berkhamstead, and Abington.

*Auroræ* were seen on 5th April at Oxford; on the 7th at Castleton; on the 16th at Hawarden and Eccles; on the 19th at Wisbeach; and on the 21st at Eccles. On 1st May at Eccles. On 7th and 18th June at Clifton; and on the 26th and 28th at Norwich.

*Snow* fell on the 14th and 29th April at Allenheads.

*Hail* fell on one day in April, and on 8 days in May.

*Fog* was prevalent on 50 days during the quarter, 28 in April, 11 in May, and 11 in June.

At *Guernsey* the mean temperatures of the air for April, May, and June were  $2^{\circ} \cdot 7$ ,  $0^{\circ} \cdot 7$ , and  $0^{\circ} \cdot 4$  above their respective averages of 21 years. The amount of rain was  $0 \cdot 332$  inch above the average in May, and  $1 \cdot 852$  in. below in June. The number of rainy days in June was 7 below the average. The month of April was very fine, and remarkable for the long continuance of very gentle winds from the eastward. The weather in May was generally fine, with slight but frequent showers. June was remarkable for frequent variations of temperature.

At *Osborne* during the evening of 5th April low scud was seen, not a thousand feet high, flying past at about 30 miles an hour; wind on the ground hardly perceptible.

At *Oxford* purple lilac opened on 27th April but was checked by the cold days.

At *Great Berkhamstead*, from the 5th to the 28th of April, the weather was fine and warm, except a few showery days about the middle of the month; the two last were cold with east wind, and there was a sharp frost on the night of the 30th, the thermometer registering  $27^{\circ}$  on the 1st of May. The first half of May was showery, and unsettled, the rest of the month fine and hot, with occasional thunder showers. A gale from the W. on the 30th. The month of June was very dry, no rain having fallen from the 3d to the 29th, and it was the warmest since 1859.

At *Wisbeach* the frosts in the latter part of April and beginning of May were detrimental to vegetation, the wheat in places turned yellow, and the grass was cut off. The thunderstorm of the 28th ult., between 9h. and 12h. P.M., was severely felt in this locality. Some beasts were killed at Upwell. There was a gale on the 30th, the maximum pressure being 11 lbs. on the square foot.

At *Castleton* on April 18th at 2h. 30m. P.M. an extraordinary darkness came on, so great as to require artificial light in the mills and schools.

At *Eccles* on the evening of 16th April a fine aurora illuminated half of the sky for two or three hours, from the magnetic pole to the ecliptic. Thick cumuli gathered beneath it from a kind of mist or nimbus. On the evening of the 21st aurora was visible again.

At *Cockermouth* during a thunderstorm on 23d May,  $0 \cdot 555$  inch of rain fell in 20 minutes. Heavy rain all day on the 29th. The amount collected between 2h. A.M. on the 29th and 4h. A.M. on the 30th was  $2 \cdot 535$  inches, of this  $1 \cdot 590$  inch fell between 9h. A.M. and 9h. P.M. on the 29th. No such heavy rain-fall has occurred here since November 1861. June was a month of very fine summer weather; rain fell only on 3 days during the month. The average mean temperature of the month in preceding 3 years was  $54^{\circ} \cdot 3$  or  $6^{\circ}$  lower than the present month. The readings of the barometer have been unusually high during the month; from the 4th to the 25th, both inclusive, the column stood above 30 inches. The night temperature between the 28th and 29th was unusually high, the reading of the minimum thermometer at 4 feet from the ground being  $61^{\circ} \cdot 0$ .

At *Bywell* and its neighbourhood the spring was rather late, but vegetation looks healthy and promising; the showers in the middle of the month were very beneficial, and have done much for the grass. Temperature very variable.

At *Great Berkhamstead* the blossom on plum trees was very abundant, apple and pear trees about the average; peaches and apricots were not so promising as in past years. It is very seldom that lilac is in bloom so early as April in this vicinity. Laburnum blossoms were generally destroyed by the frost on the 1st May, before they came into bloom. The crops of hay were light; wheat and barley appear promising. Early apples are short, the white frost on May-day having injured the blossom, but there is a better supply of the later sorts. Plums are very abundant, and pears an average crop.

At *Bywell* the temperature of May was very variable; extreme heat and cold, with heavy falls of rain. Grass is plentiful; garden crops are looking well, also the different kinds of grain are strong and healthy. Farmers are busy sowing turnips; potato planting is quite finished; those planted early are above ground and very promising. Haymaking is now occupying the farmers' time; old land a full average crop, seeds or new land above an average. Wheat, barley, and oats are looking well; potatoes also look pretty well; but turnips only look indifferent from the long drought and turnip fly. The pastures have suffered much from the dry weather and the hot sun. Rain is much required for vegetation generally.

At *Allenheads* grass crops were in a forward state in May.

At *Cockermouth* the land in April was very dry and favourable for tillage and sowing grain crops. There is now a decided want of rain (1st May). May was a month of fine weather for the crops. Grass is more abundant this spring than it has been for several years past.

At *Silloth* haymaking was almost completed by the end of June—an abundant crop. Wheat crops are looking very promising; barley and oats rather thin from the drought of this month. Potatoes good and plentiful. Turnips have suffered from the fly and drought.

At *Miltown*, Banbridge, the weather in April was most favourable for sowing, which is almost over here, and the season has nearly pulled up what it lost in the early part of the year, as the trees and plants are as far on now as at the same time last year. Wheat and oats present a healthy and vigorous appearance, and early sown flax is coming up well. The grass is in a flourishing condition. June 30th hay crops very abundant, and a large quantity has been already cut. Flax generally requires rain to lengthen it. All the other crops promise well, and fruit is abundant, especially the strawberry. The bleaching has been good this month as there has been so much sunshine.

At *Wisbeach* the corn crops looked very well in April. There was a good show for fruit, the bloom on cherry and pear trees was luxurious, but rather scant on apple trees, with a few exceptions. Rain is much needed for the green crops. The frosts during the last few nights of April checked vegetation. June.—The hay and oat crops are light; the wheat looks very well and forward; an early harvest is anticipated. The rain at the end of the month was very timely as the pastures were very bare.

At *Belvoir* the dry and sunny weather in April exercised a favourable influence on the corn crops, all of which bear a promising appearance. Pastures improved rapidly during the month, and were stocked with cattle earlier than usual. A more favourable spring for garden and agricultural operations has seldom been enjoyed. The promise of blossom on apple and pear trees is less than usual. Plums are likely to be very abundant.

At *Penketh* and its neighbourhood the hay harvest has been successful. The crops have been very heavy, and owing to the very dry weather which has prevailed during the month have, with a few exceptions, been saved without a drop of rain. The potato crops are healthy and good, but the potatoes are small in consequence of the scarcity of rain; turnips, &c. want rain badly, but wheat and other grain are doing well, and there is every prospect of a plentiful and good harvest.

At *Eccles* the weather in April was of a remarkable character. At the commencement of the month there was hardly a leaf visible. Now (1st May) trees of all kinds, except ash, are covered with leaves or small buds.

At *Castleton* the month of April was on the whole very beautiful, and though rather dry vegetation has made rapid progress, and everything is healthy and promising.

*Leaf buds first appeared on the Field Elm* on 6th April at Oxford; and on the 14th at Holkham.

*Leaf buds first appeared on the Oak* on 17th April at Hawarden; on the 18th at Great Berkhamstead; and on the 23d at Helston. On 1st May at Abington; and on the 2d at Holkham.

*Leaf buds first appeared on the Lime* on 16th April at Marlborough; on the 20th at Holkham; and on the 27th at Carlisle.

*Leaf buds first appeared on the Sycamore* on 8th April at Holkham; and on the 17th at Marlborough.

*Leaf Buds first appeared on the Horse Chesnut* on the 1st April; on the 6th at Marlborough; and on the 25th at Carlisle.

*Leaf buds first appeared on the Occidental Plane* on 9th April at Oxford.

*Leaf buds first appeared on the Hawthorn* on 7th April at Marlborough; on the 8th at Galway; and on the 11th at Holkham.

*Leaf buds first appeared on the Hazel* on 24th April at Marlborough.

*Leaf buds first appeared on the Walnut* on 27th April at Carlisle.

*Leaf Buds first appeared on the Oriental Plane* on 23d April at Holkham; and on the 26th at Carlisle.

*The Hazel was in leaf* on 13th April at Helston; on the 14th at Banbridge; and on the 27th at Marlborough.

*The Walnut was in leaf* on 24th April at Oxford; on the 25th at Wisbeach; and on the 30th at Marlborough. On 18th May at Cockermouth; and on the 20th at Banbridge.

*The Birch was in leaf* on 26th April at Galway.

*The Beech was in leaf* on 26th April at Galway.

*The Ash was in leaf* on 5th April at Penketh.

*The Larch was in leaf* on 18th April at Culloden.

*The Field Elm was in leaf* on 11th April at Marlborough; on the 18th at Holkham; on the 19th at Oxford; on the 20th at Streatley and Hurstpierpoint; on the 21st at Wisbeach; on the 22d at Penketh and Banbridge; and on the 28th at Great Berkhamstead. On 4th May at Abington.

*The Wych Elm was in leaf* on 18th April at Kingsley; on the 24th at Banbridge; and on the 25th at Wisbeach. On 6th May at Abington.

*The Oak was in leaf* on 23d April at Guernsey; on the 25th at Penketh; on the 26th at Marlborough and Oxford; on the 28th at Hurstpierpoint; and on the 30th at Great Berkhamstead. On 4th May at Wisbeach; and on the 6th at Cockermouth.

*The Lime was in leaf* on 13th April at Helston; on the 19th at Wisbeach; on the 20th at Kingsley; on the 21st at Penketh; on the 23d at Guernsey; on the 24th at Oxford; and on the 25th at Great Berkhamstead and Banbridge. On 4th May at Abington.

*The Sycamore was in leaf* on 11th April at Helston; on the 12th at Oxford; on the 19th at Cockermouth; on the 20th at Kingsley and Banbridge; on the 21st at Wisbeach; on the 22d at Marlborough, Great Berkhamstead, and Holkham; on the 23d at Guernsey; and on the 28th at Streatley.

*The Horse Chesnut was in leaf* on 12th April at Miltown, Banbridge; on the 14th at Guernsey; on the 15th at Wisbeach, Holkham, and Kingsley; on the 16th at Oxford and Great Berkhamstead; on the 19th at Llandudno; on the 20th at Cockermouth and Galway; on the 21st at Helston; and on the 22d at Marlborough.

*The common Poplar was in leaf* on 18th April at Wisbeach; on the 19th at Oxford; on the 20th at Banbridge; and on the 25th at Great Berkhamstead.

*The Occidental Plane was in leaf* on 24th April at Oxford; and on the 25th at Galway. On 9th May at Holkham.

*The Hawthorn was in leaf* on 10th April at Marlborough; on the 12th at Aspley and Banbridge; on the 14th at Wisbeach; on the 15th at Penketh; on the 17th at Llandudno; on the 18th at Helston, Great Berkhamstead, and Cockermouth; on the 20th at Holkham; and on the 26th at Carlisle.

*The Apple tree was in blossom* on 7th April at Galway; on the 19th at Helston; on the 23d at Streatley; on the 25th at Marlborough; on the 26th at Great Berkhamstead and Oxford; on the 27th at Wisbeach; on the 29th at Allenheads; and on the 30th at Banbridge. On 2d May at Penketh; and on the 3d at Holkham and Cockermouth.

*The Pear tree was in blossom* on 7th April at Galway; on the 10th at Helston; on the 12th at Allenheads and Banbridge; on the 17th at Penketh; on the 19th at Great Berkhamstead; on the 20th at Holkham; on the 21st at Battersea; on the 23d at Streatley and Oxford; on the 25th at Marlborough, Bedford, and Wisbeach; and on the 29th at North Shields. On 3d May at Cockermouth.

*The Cherry tree was in blossom* on 9th April at Streatley; on the 11th at Hawarden; on the 12th at Galway; on the 15th at Holkham; on the 16th at Marlborough and Great Berkhamstead; on the 17th at Aspley; on the 18th at Oxford; on the 19th at Banbridge; on the 22d at Wisbeach, Kingsley, and Cockermouth; and on the 23d at Silloth.

*The Peach tree was in blossom* on 1st April at Banbridge; on the 6th at Wisbeach; on the 7th at Holkham; on the 9th at Great Berkhamstead and Streatley; on the 10th at Bedford and Penketh; on the 11th at Oxford; on the 13th at Aspley.

*Plum trees were in blossom* on 6th April at Galway; on the 9th at Helston, Marlborough, and Streatley; on the 11th at Oxford; on the 13th at Holkham; on the 15th at Silloth; on the 19th at Wisbeach and Kingsley; on the 20th at Hawarden; on the 21st at Banbridge; on the 22d at Penketh; and on the 30th at Carlisle.

*Apricot trees were in blossom* on 1st April at Wilton; and on the 9th at Great Berkhamstead.

*Blackthorn was in blossom* on 24th April at Silloth.

*Lime trees were in flower* on 22d June at Great Berkhamstead.

*Lilac was in blossom* on 26th April at Oxford and Galway; on the 27th at Guernsey; on the 28th at Helston and Streatley; and on the 29th at Great Berkhamstead. On 2d May at Llandudno; on the 6th at Wisbeach and Penketh; on the 7th at Banbridge; on the 11th at Cockermouth; on the 15th at Grantham; on the 19th at Hawarden; and on the 26th at North Shields.

*Honeysuckle was in blossom* on 26th April at Helston; and on the 29th at Marlborough. On 9th May, at Abington; on the 12th at Oxford; on the 18th at Wisbeach; on the 26th at Great Berkhamstead; and on the 31st at Galway. On 1st June at Miltown, Banbridge; and on the 12th at Penketh.

*The Privet was in blossom* on 7th June at Oxford; on the 10th at Wisbeach; on the 14th at Great Berkhamstead; and on the 30th at Miltown, Banbridge.

*The Mountain Ash was in blossom* on 3d May at Oxford; on the 15th at Great Berkhamstead; and on the 16th at Wisbeach and Banbridge.

*The Syringa was in blossom* on 21st May at Abington; on the 26th at Galway; and on the 28th at Wisbeach. On 10th June at Banbridge.

*The Laburnum was in blossom* on 27th April at Galway. On 3d May at Helston; on the 5th at Oxford; on the 7th at Wisbeach; on the 11th at Abington; on the 17th at Banbridge; on the 18th at Cockermouth and Hawarden; and on the 27th at North Shields.

*The Acacia was in blossom* on 5th June at Oxford; on the 6th at Wisbeach; and on the 14th at Banbridge.

*The Yellow Broom was in blossom* on 24th April at Holkham. On 3d May at Oxford; on the 9th at Banbridge; and on the 17th at Marlborough.

*The White Broom was in blossom* on 13th May at Banbridge.

*The Horse Chesnut was in blossom* on 25th April at Galway.

*Wheat was in flower* on 10th May at Cardington; on the 22d at Grantham; and on the 23d at Silloth. On 13th June at Oxford; and on the 21st at Guernsey.

*Wheat was in ear* on 27th May at Hurstpierpoint; on the 7th at Abington; on the 14th at Grantham; on the 15th at Cockermouth and Aspley; on the 17th at Silloth; on the 18th at Penketh and Kingsley; and on the 25th at Bywell.

*Barley was in flower* on 17th May at Cardington; on 11th June at Aspley.

*Barley was in ear* on 19th May at Marlborough; on 5th June at Cardington; on the 15th at Abington and Bywell; on the 16th at Grantham; on the 17th at Aspley; and on the 20th at Cockermouth.

*Oats were in ear* on 21st June at Penketh; and on the 27th at Cockermouth.

*Rye* was in ear on 13th May at Aspley.

*Cherries* were ripe on 18th June at Penketh ; and on the 25th at Miltown, Banbridge.

*Currants* were ripe on 20th June at Great Berkhamstead.

*Strawberries* were ripe on 17th June at Great Berkhamstead.

*White Hepatica* in blossom on 2d April at North Shields.

*Blue Violet* in blossom on 9th April at North Shields.

*Violet* in blossom on 1st April at Aspley.

*Primrose* in blossom on 6th April at Aspley.

*White Violet* in blossom on 9th April at North Shields.

*Primula* in blossom on 9th April at Aspley.

*Anemone* in blossom on 9th April at Aspley ; and on the 23d at North Shields.

*Daffodil* in blossom on 9th April at Aspley ; and on the 11th at North Shields.

*White Alpin Auricula* in blossom on 11th April at North Shields.

*Jerusalem Cowslip* in blossom on 16th April at North Shields.

*Flowering Currant* in blossom on 17th April at North Shields.

*Auricula* in blossom on 21st April at North Shields.

*Red Fumatory* in blossom on 22d April at North Shields.

*Purple Fumatory* in blossom on 22d April at North Shields.

*Double Red Daisy* in blossom on 24th April at North Shields.

*Blue Periwinkle* in blossom on 27th April at North Shields.

*Pyrus Japonica* in blossom on 10th April at Aspley.

*Ribes* in blossom on 10th April at Aspley.

*Gentiana Verna* in flower on 3d May at North Shields.

*Yellow Narcissus* in flower on 5th May at North Shields.

*Yellow Alysum* in flower on 6th May at North Shields.

*Wallflower* in flower on 6th May at North Shields.

*Primula Farinosa Narcissus* in flower on 6th May at North Shields.

*Dwarf Blue Iris* in flower on 14th May at North Shields.

*Double White Saxifrage* in flower on 19th May at North Shields.

*White Squil* in flower on 19th May at North Shields.

*Tulips* were in flower on 20th May at North Shields.

*Blue Hyacinth* in flower on 20th May at North Shields.

*London Pride* in flower on 21st May at North Shields.

*Geranium Pheum* in flower on 21st May at North Shields.

*White and Purple Lilac* in flower on 23d May at North Shields.

*Double White Narcissus* in flower on 24th May at North Shields.

*Laburnum* in flower on 24th May at North Shields.

*Swallows* were first seen at Osborne on 4th April ; at Wilton on the 5th ; at Aspley, Holkham, and Miltown on the 7th ; at Helston and Grantham on the 9th ; at Oxford on the 10th ; at Aldershot, Castleton, and Silloth on the 13th ; at Hurstpierpoint and Bywell on the 14th ; at Streatley and Cockermouth on the 15th ; at Galway on the 16th ; at Cardington, Wisbeach, and Kingsley on the 17th ; at Stonyhurst on the 18th ; at Hawarden on the 19th ; at Great Berkhamstead on the 20th ; at Clifton and Llandudno on the 22d ; at Truro and Penketh on the 23d ; at Allenheads on the 24th ; at Wakefield and Culloden on the 26th ; and at Marlborough and Carlisle on the 28th.

*The Cuckoo* was first heard at Marlborough on 8th April ; at Stonyhurst on the 10th ; at Helston on the 12th ; at Aldershot on the 13th ; Hurstpierpoint, Barnstaple, Great Berkhamstead, and Wisbeach on the 14th ; at Truro on the 16th ; Osborne, Streatley, and Cardington on the 17th ; at Holkham and Hawarden on the 18th ; at Miltown on the 20th ; at Llandudno and Allenheads on the 21st ; at Penketh on the 23d ; at Clifton and Culloden on the 24th ; at Kingsley and Cockermouth on the 25th ; at Galway on the 28th ; and at Wakefield and Bywell on the 29th. On 8th May at North Shields ; and on the 30th at Silloth.

*The Nightingale* was first heard on 11th April at Cardington ; on the 14th at Hurstpierpoint ; on the 15th at Wisbeach ; on the 16th at Royston ; on the 17th at Aldershot ; on the 18th at Aspley ; and on the 23d at Holkham. On 23d May at Penketh.

*The Hawfinch* was first seen on 3d April at Marlborough.

*The Corncrake* was first seen on 28th April at Galway.

NAMES OF STATIONS.	Mean Pressure of dry Air reduced to the level of the Sea.	Highest Reading of the Thermometer.	Lowest Reading of the Thermometer.	Range of Temperature in the Quarter. The highest temperatures of the air were at Bedford, 92°·0; Lampeter, 91°·5; Royston, 90°·8; and Barnstaple, 90°·5. The lowest temperatures of the air were at Great Berkhamstead, 27°·0; Streatley, 27°·4; and Silloth, 28°·2. The greatest daily ranges were at Bedford, 26°·1; Bath, 25°·2; Royston, 24°·7; and Lampeter, 24°·5. The least daily ranges were at Aspley, 10°·8; Liverpool, 10°·6; Greenwich, 10°·7; and Ventnor, 11°·4. The greatest number of rainy days were at Aspley, Eccles, Stonyhurst, and Miltown, at each of which stations it rained on 38 days. The heaviest falls occurred at Camden Town, 8·8 in.; Stonyhurst, 8·1 in.; Greenwich, 7·2 in.; and Barnstaple, 7·0 in. The least falls were at Diss, 3·0 in.; Otley, 3·1 in.; and Wisbeach, 3·8 in.

QUARTERLY METEOROLOGICAL TABLE for different PARALLELS of LATITUDE.

PARALLELS OF  LATITUDE. &c.		Mean Pressure of dry Air reduced to the level of the Sea.	Mean of all Highest Readings of the Thermometer.	Mean of all Lowest Readings of the Thermometer.	Mean Range of Temperature in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation.	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Maximum in Rays of Sun.	Mean Reading of Minimum on Grass.	Mean Estimated Strength,	WIND.				Mean Amount of Ozone.	Mean Amount of Cloud.	RAIN.	
																				Relative Proportion of						Mean Number of Days in fall.	Mean Amount collected.

## REGISTRARS' NOTES.

*In compliance with the following instruction, remarks have in many instances been appended by the Registrars to their Returns; from which the following Notes have been selected. The Registrars alone must be considered responsible for the opinions which they express.*

### INSTRUCTION TO REGISTRARS:—

“If the Deaths registered during the quarter have been above or below the average, state whether, in your opinion, the fact is wholly or partially accounted for by sanitary arrangements, by increase or decrease of population, the weather, Small-pox, Measles, Scarlatina, Whooping-cough, Fever (including typhus, typhoid, relapsing, infantile fever), Cholera, Diarrhœa (including bowel complaint), Dysentery, Bronchitis, or other disease. Also with regard to increase or decrease of Births, you may mention any circumstance to which it may be attributed. By ‘Average’ must be understood *not* the average of numbers in other quarters of the year, but the average of *corresponding* quarters in four or five previous years.”

The figures prefixed refer to the numbers of the District and Sub-District. The name of the District is in SMALL CAPITALS, that of the Sub-district in *italics*.

## II. SOUTH-EASTERN COUNTIES.

### 1. SURREY (*extra-metropolitan*).

40; 2. FARNHAM; *Farnham*.—Births 82; Deaths 87. The deaths are 30 above the average of the last five corresponding quarters. Scarlatina carried off no less than 24 children.

### 2. KENT (*extra-metropolitan*).

51; 1. GRAVESEND; *Gravesend*.—Births 182; Deaths 99. The deaths for the quarter would have been under the average but for the prevalence of small-pox, which has carried off 16 persons. The average, without allowing for the increase in population, which has taken place during the last year or two, is 95.

56; 2. SEVENOAKS; *Sevenoaks*.—Births 102; Deaths 62. Both births and deaths are in excess of the average of this quarter, attributable to the influx of labourers and officials engaged on the railway works. Small-pox has prevailed for some time in this district, and still continues. 6 deaths occurred from it, 5 of these to persons unvaccinated.

62; 2. WEST ASHFORD; *Ashford*.—Births 96; Deaths 57. Small-pox (in a mild form) has been prevalent in Ashford during the quarter, and 7 deaths from it have been registered.

### 3. SUSSEX.

76; 2. HASTINGS; *All Saints*.—Births 88; Deaths 38. 10 deaths occurred from small-pox.

76; 3. HASTINGS; *St. Mary in the Castle*.—Births 101; Deaths 79. There were 9 deaths from small-pox.

### 4. HAMPSHIRE.

97; 1. ALVERSTOKE; *Alverstokey*.—Births 180; Deaths 127. The deaths are about 10 per cent. above the average. There were 15 from measles.

105; 1. SOUTHAMPTON; *Southampton*.—Births 395; Deaths 237. The deaths are 17 above the average of corresponding quarters of the 5 previous years. At the present time the district appears to be in a healthy condition, but 20 deaths have resulted from scarlatina, and 6 from small-pox in the quarter.

### 5. BERKSHIRE.

122; 3. FARINGDON; *Buckland*.—Births 42; Deaths 31. The deaths are greatly above the average, owing to the prevalence of scarlatina and other fevers. 14 deaths were registered as resulting from scarlatina and typhus.

## III. SOUTH MIDLAND COUNTIES.

### 8. BUCKINGHAMSHIRE.

150; 4. WYCOMBE; *Wendover*.—Births 54; Deaths 37. The deaths are above the average. Measles and scarlatina have prevailed extensively in my district; the former was fatal in 5 cases, the latter in 8.

### 12. BEDFORDSHIRE.

183; 1. LEIGHTON BUZZARD; *Leighton Buzzard*.—Births 74; Deaths 64. Scarlatina has been very prevalent this quarter, and there have been 12 deaths from it.

## IV. EASTERN COUNTIES.

### 14. ESSEX.

202; 1. MALDON; *Southminster*.—Births 29; Deaths 29. I have had 6 severe cases of small-pox in Steeple, in which place the open ditches and drains (which I reported to you once before) are in a most filthy state, and the authorities can do little with them. Whooping-cough to a very great extent has prevailed all over the district, but particularly in Southminster. I have registered 5 deaths from that disease, and one case of typhoid fever in Althorne.

### 16. NORFOLK.

229; 1. FLEGG; *East Flegg*.—Births 52; Deaths 32. Diphtheria has been prevalent in the parish of Caistor, where 4 children in one family were carried off; also in the parish of Ormesby St. Margaret, where 2 children in a family died of it.

## V. SOUTH-WESTERN COUNTIES.

### 17. WILTSHIRE.

250; 2. HIGHWORTH; *Swindon*.—Births 130; Deaths 56. 9 deaths occurred from small-pox, which has been prevalent.

254; 1. CALNE; *Calne*.—Births 55; Deaths 68. The increase of deaths is owing to the prevalence of small-pox.

### 19. DEVONSHIRE.

281; 7. ST. THOMAS; *St. Thomas*.—Births 49; Deaths 34. 7 deaths occurred from scarlatina.

287; 1. PLYMOUTH; *Charles the Martyr*.—Births 190; Deaths 150. There is a considerable diminution in the number of births, which I conceive may

be attributed to the closing of two large factories, one for the manufacture of soap, and the other of pottery, the majority of the workpeople having gone elsewhere. The strikes in the building trade have also tended to lessen the number, as a great many men, with their families, have left the town. The mortality is about the average, the sub-district being very healthy.

287; 2. PLYMOUTH; *St. Andrew*.—Births 344; Deaths 190. The population of this district is rapidly increasing, owing, I think, chiefly to the gradually increasing prosperity of the port, and, allowing for this fact, the deaths have been below the average of corresponding quarters, which may be accounted for chiefly by sanitary improvements, especially the new system of sewage.

#### 20. CORNWALL.

311; 2. PENZANCE; *St. Ives*.—Births 86; Deaths 62. 18 deaths occurred from small-pox.

#### 21. SOMERSETSHIRE.

317; 3. LANGPORT; *Curry Rivel*.—Births 43; Deaths 37. Small-pox is prevalent at Drayton and part of Curry Rivel, but no deaths have occurred from it.

326; 3. BATH; *Abbey*.—Births 62; Deaths 93. 17 deaths from small-pox.

326; 6. BATH; *Lansdown*.—Births 86; Deaths 79. 16 deaths were registered from small-pox in the early part of the quarter, chiefly amongst the unvaccinated. 3 deaths occurred from diphtheria. Small-pox is now greatly on the decline, which is due in a great measure to many persons getting themselves re-vaccinated, and to the separation of the diseased from the healthy.

326; 7. BATH; *Batheaston*.—Births 44; Deaths 28. Small-pox has been very general throughout the district. I have registered 4 deaths from this cause, 3 of which are returned as having occurred to persons "not vaccinated."

### VI. WEST MIDLAND COUNTIES.

#### 22. GLOUCESTERSHIRE.

337; 2. WHEATENHURST; *Frampton*.—Births 35; Deaths 26. There have been several cases of fever in the parish of Eastington during the quarter; 4 deaths from scarlatina, and one from typhus. The supply of water is deficient; and there is need of sanitary improvement.

#### 25. STAFFORDSHIRE.

382; 3. DUDLEY; *Sedgley*.—Births 435; Deaths 233. The deaths are near the average. 27 were from scarlatina.

#### 27. WARWICKSHIRE.

395; 1. ASTON; *Deritend*.—Births 390; Deaths 135. The deaths are about a fourth below the average, which I cannot account for, except by the general healthiness of the season. Small-pox has been very prevalent during the quarter, but has been fatal only in 7 cases, 5 of which were without previous vaccination.

### VII. NORTH MIDLAND COUNTIES.

#### 30. LINCOLNSHIRE.

434; 1. GAINSBOROUGH; *Owston*.—Births 34; Deaths 31. The deaths a little above the average, Scarlatina being very prevalent and fatal.

#### 31. NOTTINGHAMSHIRE.

436; 1. WORKSOP; *Worksop*.—Births 76; Deaths 62. The deaths registered in the quarter are above the average for the corresponding quarter of 4 preceding years, which is 47. The sanitary arrangements of the town are good. This, however, was not the case with Shireoaks, where the drainage was defective. Fever has been prevalent there, and 4 deaths were from fever during the quarter at this place. The drainage has been improved, and the disease has ceased.

### VIII. NORTH-WESTERN COUNTIES.

#### 33. CHESHIRE.

452; 3. STOCKPORT; *Heaton Norris*.—Births 117; Deaths 73. The deaths are below those of any corresponding quarter for the last 20 years, with one exception. This, I am of opinion, is to be accounted for by decrease of population, caused partly by the present depression of the cotton manufacture, and partly by the construction of a railway about to be opened, which has removed upwards of 100 houses in this sub-district.

452; 5. STOCKPORT; *Stockport, second*.—Births 108; Deaths 55. The deaths are fewer than in any corresponding quarter, which may be attributed to improved sanitary measures, and to the fine seasonable weather. No disease of an epidemic character has existed in my district for a considerable time.

452; 7. STOCKPORT; *Hazelgrove*.—Births 47; Deaths 25. The deaths are near the average. Measles is very prevalent in this district, but only 2 cases have proved fatal up to the present time. In other respects the district is very healthy.

#### 34. LANCASHIRE.

461; 3. LIVERPOOL; *Dale-street*.—Births 246; Deaths 217. The deaths are about the average. Typhus and small-pox, which were very prevalent during the previous quarter, have considerably abated. The latter disease was fatal last quarter in only 7 cases.

461; 6. LIVERPOOL; *Mount Pleasant*.—Births 550; Deaths 850. In consequence of the continuance of fever in Liverpool, probably the deaths in this sub-district are above the average; but not having the returns of former years in my possession, I am unable to speak with certainty. There were 207 deaths from typhus; 26 from small-pox; 26 from measles. The excess of deaths over births is accounted for by the Royal Infirmary and Liverpool workhouse (which is in reality the parish hospital) being situated in this sub-district. Excluding the hospitals, the numbers in the district are: births 406; deaths 219.

462; 6. WEST DERBY; *West Derby*.—Births 625; Deaths 346. 12 deaths were from small-pox, 13 from typhus, 7 from diphtheria.

465; 3. WIGAN; *Wigan*.—Births 412; Deaths 293. 28 deaths from measles were recorded; 18 from typhus and typhoid fever.

465; 4. WIGAN; *Hindley*.—Births 268; Deaths 146. Some parts of the township are very ill supplied with water, the inhabitants having to fetch it from a distance. This should not be the case in a place where collieries and iron works are augmenting the population.

468; 8. BOLTON; *Edgworth*.—Births 16; Deaths 15. 7 deaths occurred this quarter from malignant scarlatina.

473; 5. MANCHESTER; *St. George*.—Births 499; Deaths 393. There were 29 deaths from measles, 16 from diarrhœa.

475; 1. OLDHAM; *Oldham-below-Town*.—Births 427; Deaths 318. The town is in a very healthy state. There were 46 deaths from measles.

475; 5. OLDHAM; *Royton*.—Births 99; Deaths 46. There were 17 deaths from measles.

475; 6. OLDHAM; *Crompton*.—Births 60; Deaths 50. There has been much sickness during the last quarter in the sub-district of Crompton, although the weather has been fine. Deaths much above the average. From measles 6, from scarlatina 9 deaths.

478; 2. BURNLEY; *Padiham*.—Births 91; Deaths 71. 32 deaths have taken place from scarlatina in the last quarter.

478; 3. BURNLEY; *Colne*.—Births 225; Deaths 139. 18 deaths occurred from scarlatina.

480; 5. BLACKBURN; *Oswaldtwisle*.—Births 152; Deaths 97. The deaths are 18 above the average. Scarlatina has been prevalent amongst children, and there were 34 deaths from fever during the last quarter.

481; 3. CHORLEY; *Rivington*.—Births 41; Deaths 31. The deaths exceed the average. There were 9 from scarlatina.

482; 2. PRESTON; *Preston*.—Births 873; Deaths 544. The deaths are 40 less than in the corresponding quarter of last year, and 38 less than the average for the last five corresponding quarters. The following diseases have been amongst the most fatal: scarlatina 58, phthisis 64, bronchitis 51, diarrhœa 38, convulsions 28, pneumonia 19, meningitis and hydrocephalus 15, typhus and typhoid fever 10. Fever (not specified) 6, croup 9, small-pox 2. 257 children died at and under five years old. Several cases of small-pox have occurred, but only 2 proved fatal; one was that of a child of 8 months old, who had not been vaccinated in consequence of being in a delicate state of health from its birth; the other was that of a boy, aged 5 years, who had been vaccinated when 8 months old. I have only registered 4 deaths from this disease during the last  $4\frac{1}{4}$  years out of 10,171 deaths. The Vaccination Act has been well carried out in this district, and has proved a great blessing in the saving of many lives. I registered the death of an old woman, aged 100 years, on the 6th April, from old age. She was born at Pilling Moss, Fylde, and was twice married, both husbands being cotton weavers. When she married the second time she was 79 years old. She was employed in a cotton factory as a reeler, &c. up to her 85th year, and was then obliged to use spectacles, but for some time previous to her death her sight was very good, and she could see to read without them.

483; 3. FYLDE; *Poulton le Fylde*.—Births 139; Deaths 99. The deaths are considerably above the average. Scarlatina has prevailed extensively in the sub-district, and several deaths have been recorded in consequence of it. We have been for a long time without rain, and the crops are suffering from drought. The hay harvest is rapidly progressing, and a great deal of heavy crops have been gathered. An early corn harvest is anticipated.

485; 3. LANCASTER; *Lancaster*.—Births 160; Deaths 161. The deaths have been 45 above the average. Measles and whooping-cough have been very prevalent, but the deaths from these diseases have not been proportionally so numerous as on some former occasions before sanitary improvements were carried out. 15 deaths occurred from measles and 5 from whooping-cough.

## IX. YORKSHIRE.

### 35. WEST RIDING.

495; 2. TODMORDEN; *Todmorden*.—Births 151; Deaths 121. The deaths are 9 above the average. Scarlatina still prevails, though much more slightly, and 8 deaths have occurred from that cause. Whooping-cough, which is prevailing in almost all parts of the district, was fatal in 7 cases.

498; 5. HALIFAX; *Elland*.—Births 156; Deaths 118. In Stainland in this district the deaths have been considerably above the average. Out of 57 deaths registered in that township, 13 were from scarlatina.

503; 5. WAKEFIELD; *Horbury*.—Births 36; Deaths 24. The deaths this quarter are a little above the average, scarlatina, which was prevalent, having been fatal in 11 cases.

508; 5. SHEFFIELD; *Brightside*.—Births 481; Deaths 205. The births are 104 above and the deaths 23 below the average of the five previous corresponding quarters. From the table annexed, it will be seen that the chief mortality has been among the young and aged, the two classes forming nearly two-thirds of the whole of the deaths. The district may be considered to be in a healthy state.

### 36. EAST RIDING (*with York*).

520; 3. HULL; *Myton*.—Births 432; Deaths 256. The deaths are 17 below the average of four corresponding quarters, and 77 less than the number in the June quarter of 1864. There were 19 deaths from typhus.

523; 3. DRIFFIELD; *Bainton*.—Births 36; Deaths 25. The deaths are above the average. 7 females died of diphtheria; 2 males and one female of scarlatina.

### 37. NORTH RIDING.

532; 3. GUISBROUGH; *Kirkleatham*.—Births 153; Deaths 94. The mortality for the past quarter has been considerably above the average. The deaths for the corresponding quarter in 1864 having been 68, and for 1865, 94. This is accounted for by measles and small-pox having prevailed as epidemics for the greater part of the quarter throughout the district, though the mortality has been much greater about Eston than any where else. The deaths from measles amounted to 17, and from small-pox to 8. 7 of the 8 cases of small-pox occurred without vaccination.

534; 2. NORTHALLERTON; *Northallerton*.—Births 59; Deaths 44. During the past quarter, typhus, typhoid fever, and small-pox have been more or less prevalent in great part of the district. The mortality

in May was much greater than usual, owing to pulmonary diseases. The return exemplifies a fact that I have for some time noticed in this district, namely, that the rate of mortality between the ages of 20 and 30 years is gradually becoming greater, whilst that between 30 and 50 years is more rapidly decreasing.

## X. NORTHERN COUNTIES.

### 38. DURHAM.

545; 1. DURHAM; *Tanfield*.—Births 97; Deaths 45. The births and deaths are above their averages, which may be wholly accounted for by the increase of population. Nearly 200 cottages have been erected in this sub-district during the past twelve months.

545; 3. DURHAM; *St. Oswald*.—Births 242; Deaths 151. Births and deaths are above the average. Measles has been the prevailing epidemic, and was fatal in 10 cases.

547; 2. HOUGHTON-LE-SPRING; *Hetton-le-Hole*.—Births 140; Deaths 91. The average number of deaths for the last five corresponding quarters is 67. Diarrhœa was rather prevalent during the hot weather; there were 10 deaths from it. 48 children under 2 years of age died during the quarter.

### 39. NORTHUMBERLAND.

552; 4. NEWCASTLE-ON-TYNE; *All Saints*.—Births 325; Deaths 163. The births are above and the deaths below the average, affording a satisfactory proof of the healthy condition of my district, comprising the parishes of All Saints, Christ Church, and St. Anne, with a population of upwards of 27,000. The lower part of the town, especially in the neighbourhood of Sandgate and Pandon Dene, inhabited by the hard working and industrious poor, is at present remarkably healthy. There has not been one death from typhoid fever or typhus during the last three months.

553; 1. TYNEMOUTH; *Wallsend*.—Births 118; Deaths 24. The number of births is considerably above the average, in consequence of the very great increase of population caused by the great demand for labour at the new ship building yards and chemical factories. The number of deaths is very small. I never knew the district in a more healthy condition. The sanitary arrangements at Willington quay are very much improved.

### 40. CUMBERLAND.

571; 2. WHITEHAVEN; *Whitehaven*.—Births 137; Deaths 122. 13 deaths occurred from fever; 9 from small-pox. I am glad to say that fever and small-pox, which have been very prevalent and fatal in this district for some time back, are greatly abated.

571; 3. WHITEHAVEN; *St. Bees*.—Births 94; Deaths 82. 13 deaths were from small-pox.

## XI. MONMOUTHSHIRE AND WALES.

### 42. MONMOUTHSHIRE.

578a; 2. ABERGAVENNY; *Llanvihangel*.—Births 19; Deaths 11. Small-pox has been prevalent in my district, but no case has proved fatal.

579; 1. PONTYPOOL; *Pontypool*.—Births 298; Deaths 176. Small-pox still prevalent in this district.

580; 2. NEWPORT; *Newport*.—Births 273; Deaths 165. A malignant form of small-pox has attacked both vaccinated and unvaccinated persons. I re-

gistered one case of "congenital small-pox," and 11 cases in which it was not stated whether the deceased persons had been vaccinated or not, including one person aged 60, and another 40 years of age. 13 cases were of persons vaccinated, and 6 of persons not vaccinated. Otherwise the mortality has not been heavy.

### 43. SOUTH WALES.

581b; 3. PONTYPRIDD; *Llantrisant*.—Births 111; Deaths 122. The deaths registered this quarter have been much above the average. Measles, scarlatina, and small-pox are very prevalent in this sub-district. 27 deaths were from measles, 20 from scarlatina, and 16 from small-pox.

582; 2. MERTHYR TYDFIL; *Lower*.—Births 286; Deaths 200. Scarlatina caused 31 deaths; fever (including typhus and typhoid) 12; small-pox 6; measles 6.

582; 4. MERTHYR TYDFIL; *Aberdare*.—Births 518; Deaths 356. The births and deaths are rather above their averages. I attribute this as regards the former to an increase of population; and as regards the latter, partly to the same cause, and partly to small-pox and scarlatina having prevailed, 28 cases of small-pox having been fatal, and 14 of scarlatina. 24 out of the 28 cases of small-pox occurred in the first month of the quarter.

584; 1. NEATH; *Margam*.—Births 195; Deaths 123. 13 deaths occurred from measles; 10 from small-pox.

584; 2. NEATH; *Neath*.—Births 163; Deaths 123. The deaths in this quarter are much diminished in number, but they are still in excess of the average of corresponding quarters in previous years. This is attributable to the prevalence of small-pox and measles; but these diseases are rapidly disappearing.

585a; 2. SWANSEA; *Llangafelach*.—Births 187; Deaths 94. 16 deaths occurred from scarlatina.

585a; 3. SWANSEA; *Swansea*.—Births 360; Deaths 251. The births and deaths are above the average. Measles was fatal in 23 cases; small-pox in 19; diphtheria in 6.

585b; 1. GOWER; *Eastern*.—Births 45; Deaths 31. There have been epidemics of scarlatina and measles, the latter of a very mild form.

600; 3. BRECKNOCK; *Brecknock*.—Births 50; Deaths 51. Scarlatina has been very prevalent in my district, and to that I attribute the increased number of deaths.

601; 5. CRICKHOWELL; *Crickhowell*.—Births 16; Deaths 20. Scarlatina and diphtheria have been prevalent in this sub-district, but according to the certificates received I have only registered 2 deaths from each. The opinion of the medical men of this place is, that the excess of deaths has been in consequence of the very severe weather we had during the winter months. There are very few cases of scarlatina at present.

### 44. NORTH WALES.

611; 4. WREXHAM; *Wrexham*.—Births 198; Deaths 187. The deaths are above the average of five corresponding quarters of previous years. The increase is owing to the large number of children who have died from measles, pneumonia, and convulsions. 40 died from measles.

613; 2. ST. ASAPH; *Abergele*.—Births 44; Deaths 47. Scarlatina maligna has been prevalent during the last quarter.

[The following Index furnishes a reference to the *Number* of each DISTRICT in the Tables of Marriages, Births, and Deaths contained in this Return. Any District in the Registrars' Notes may be found in the same manner. In forming the alphabetical arrangement, the principle adopted has been to place compound names in the order in which they are pronounced.]

Aberayron, 596.  
Abergavenny, 578 *a*.  
Aberystwith, 597.

LONDON:

Printed by GEORGE E. EYRE and WILLIAM SPOTTISWOODE,  
 Printers to the Queen's most Excellent Majesty.  
 For Her Majesty's Stationery Office.

QUARTERLY RETURN  
OF  
THE MARRIAGES, BIRTHS, AND DEATHS  
REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF  
ENGLAND.

By Authority of the Registrar General.

PUBLISHED BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 67.] *Marriages, April, May, June, 1865.* [Price 4d.  
*Births and Deaths, July, Aug., Sept., 1865.*

General Register Office, Somerset House,  
31st October 1865.

THE UNITED KINGDOM.

The *Registers* of the *United Kingdom* show that 114,328 persons *married* in the quarter that ended in *June* last; that the *births* of 243,119 children, and the *deaths* of 148,167 persons of both sexes, were registered in the three months ending on *September* 30th. The natural recorded increase of population in 92 days was 94,952, or 1032 daily. Exclusive of 11,490 foreigners, 53,564 emigrants sailed from these islands in the same period. So about 582 emigrants left daily; and allowing for defects in registration, which has only recently been established in Ireland, the increase at home has been about 506 daily.

The death-rate of the United Kingdom differs little from the average of England and Wales to be here discussed; while the several facts concerning the other divisions of the Kingdom are fully set forth in the reports of the Registrar General of Scotland and the Registrar General of Ireland.

The estimated population in 1865 of England, Scotland, and Ireland is 29,772,294. The death-rate of the quarter is 1·974 per cent.

TABLE I.—*Marriages, Births, and Deaths*, returned in the Years **1855-65** and in the Quarters of those Years.

ENGLAND.

This Return comprises the BIRTHS and DEATHS registered by 2200 Registrars in all the districts of England during the summer quarter that ended on September 30th, 1865 ; and the MARRIAGES in 12791 churches or chapels, about 5272 registered places of worship unconnected with the Established Church, and 641 Superintendent Registrars' offices, in the quarter that ended on June 30th, 1865.

The marriages in the spring quarter of the year were more numerous than they had ever been before ; and this implies that the great body of the people were prosperous. In the last summer quarter ending on September 30th the birth-rate exceeded the average ; and the death-rate also exceeded the average rate of the corresponding quarter of ten previous years. Many districts suffered from scarlatina and other epidemics during the two years 1863-64, and the mortality has been exceptionally high during the last three summers.

During the last three months scarlatina was epidemic in many places. Diarrhœa was prevalent and often fatal to children ; and scattered cases of summer cholera were as usual fatal in unhealthy districts. At the end of the quarter 4 deaths from cholera occurred in Southampton, 2 of which were pronounced epidemic cholera. The meteorology of the season has been extraordinary, the potato has in many places been blighted, and the cattle have, to an extent unknown, been struck down by zymotic disease ; yet the people have been hitherto untouched by pestilence. While Marseilles and Paris are smitten by cholera, London and the large cities of the United Kingdom remain unassailed.

MARRIAGES.

91,544 persons married in the quarter that ended on June 30th. The marriage-rate was 1·752, or ·065 above the quarterly average.

The increase of marriages occurred chiefly in London, the Eastern Counties, Shropshire, Leicestershire, Yorkshire, Durham, Northumberland, and South Wales. The marriages declined in Lancashire : while there was some depression in the cotton manufacturing districts, there was increased activity among the woollen manufacturers. The demand for coal and iron increases every year. The effects are plainly traceable in the marriage registers.

BIRTHS.

181,642 births were registered in the three months ending with September. It is the highest number that has ever been registered in any summer quarter. The mean daily number of births was 1974 ; that is 82 hourly, or more than one birth a minute.

The births exceeded by 8203 and 890 the births registered in the corresponding quarters of the two previous years ; the chief increase since 1863 being in London, Lancashire, Yorkshire (West Riding), Durham, and Wales.

The birth-rate of the quarter is 3·429, that is ·104 above the average of 3·325.

INCREASE OF POPULATION.

As the births were 181,642 and the deaths 113,404, the natural increase of population in 92 days was 68,238, or 742 daily. The migration from one part of the United Kingdom to another is unrecorded ; but England every year is joined by a certain number of recruits from Scotland and Ireland.

About 19,256 emigrants of English origin sailed in the 92 days from the ports of the United Kingdom, at which there are Government emigration officers ; 9447 sailed to the United States, 2311 to the North American Colonies, 6018 to Australasia, and 1480 to other places ; on an average 209 English emigrants left these shores daily.\*

PRICES, PAUPERISM, AND THE WEATHER.

The average price of wheat was 43s. 3d a quarter during the last three months ending with September 30th ; thus it is a shilling a quarter higher than in the corresponding season of 1864, and 2s. 4d. lower than in that of 1863. The price of wheat has been remarkably steady during the two years, the three months average ranging little above or below the average (40s. 9d.) of the whole period. The best potatoes at the Waterside Market, Southwark, sold on an average at 85s. a ton ; so the price was lower by 15s. than it was in the corresponding quarter of last year, and somewhat lower than the prices of the same season in 1863.

The average prices of the best mutton by the carcase in the corresponding summer months of 1863, 1864, 1865 rose from 6¾d. to 7d. and finally to 8¾d. per lb.

TABLE III.—The Average Prices of Consols, of Wheat, of Meat, and of Potatoes, also the Average Number of Paupers relieved on the last day of each Week, and the Mean Temperature, in each of the Nine Quarters ending September 30th, 1865.

\* Return with which the Registrar General has been favoured by the Emigration Commissioners: Of 65,054 emigrants the origin was undistinguished in 1794 cases which have been distributed by calculation.

The price of inferior qualities rose from  $4\frac{3}{4}d.$  to  $5\frac{1}{2}d.$  and to  $6\frac{1}{4}d.$  per lb. The best beef, notwithstanding the panic, which the retail butchers have turned to account, rose in the same periods only from  $6\frac{1}{4}d.$  to  $6\frac{1}{2}d.$ , and to  $7d.$  per lb. The prices of the inferior qualities remained steadily at  $4\frac{1}{2}d.$  per lb. during the three last summers. If the importation of cattle had been stopped, prices would, probably, have been very different.

A gratifying reduction of pauperism is observable during the three summers ; the numbers of in-door and out-door poor fell from 939,984 to 855,039 and to 836,761. Within the interval of two years 103,223 paupers were struck off the relief rolls, without, we may hope, any inhumanity on the part of the Poor Law administrators.

The weather of the summer quarter was remarkable. The temperature of July was  $2^{\circ}\cdot4$  above the average of 94 years, and the temperature of September, when the sun no longer rises to the same height, and no longer shines so many hours, was higher than the temperature of July. There was little rain in September ; the blue sky was cloudless, and the air was unusually dry ; but the dews were copious, and fog was prevalent on twenty days. To find a September of which the temperature approaches  $63^{\circ}\cdot9$ , Mr. Glaisher travels back to the year 1815, when the temperature was  $62^{\circ}\cdot3$  ; and in all the years since 1771 he does not find its parallel. The temperature of August was below the average ; but notwithstanding the temporary depression, the temperature of the six months from April to September exceeds any on record since the same remote date. It was approached within a little by the temperature of the same months of 1846. Both years had in them something of a tropical character.

The rain-fall at Greenwich was 6·5 inches, which is nearly an inch ( $\cdot9$ ) below the average of 50 years. Rain fell in large quantities at long intervals. The wind on the surface of the earth blew at the rate of eight miles an hour. At all the stations the rain-fall in September was inconsiderable.

The remarks on the season by Mr. Glaisher, who has contributed more than any other living person to the progress of meteorology, will be read with interest.

DEATHS ; AND THE STATE OF THE PUBLIC HEALTH.

113,404 deaths were registered in the three months, and the mortality was at the annual rate of 2·141 per cent. ; that is  $\cdot169$  above the average, but differing little from the mortality of the two preceding summer quarters.

This is the result of a balance of high and low rates in the eleven divisions of the kingdom, as is seen in the Table IV. of the mortality per 1000 in the two summer quarters of 1864 and 1865. The rate for all England was 21 in the two seasons. Yorkshire here proclaims aloud in the increasing death-rate her sanitary failings ; the summer mortality rose from 24 to 25. In Lancashire and Cheshire the mortality was 23 and 26. The Eastern Counties also experienced an increase ; so did the Northern Counties. There is a decisive fall in the mortality of Gloucestershire, Staffordshire, Worcestershire, and Warwickshire, reducing the mortality of

TABLE IV. — Average Annual Rate of Mortality to 1000 of the Population in the 11 Divisions of England in the 10 Years 1851-60 ; in the Summer and Autumn Quarters of 1864 ; and in the Winter, Spring, and Summer Quarters of 1865.

the West Midland Counties from 22 to 19. Various sanitary improvements have been carried out with good effect. This is also the case with London, where the works of the Metropolitan Board are apparently beginning to display their effects. The mortality of London in the summer quarter of last year was at the rate of 24 ; in the summer of this year it is 22.

The districts of the chief towns, containing an estimated population of 11,757,883, have experienced high rates of mortality ; during the three summer quarters the mortality has been at the rate of 24 per 1000, nearly two above the average. In the remaining districts with 9,260,260 inhabitants the mortality declined slightly, and was at the rate of 18 per 1000 in the last summer. This is *one* over the average of 17. Here also is room for improvement ; but many of the towns are Augean stables, which the municipal authorities have hitherto failed to sweep out. In their limits *one* death in every *four* is unnatural, according to the finding of these inflexible facts. The eight English cities and boroughs arranged according to the mortality stand for this particular quarter in the following order of insalubrity ; Bristol 20, London 22, Birmingham 23, Salford 30, Hull 30, Leeds 32, Manchester 33, Liverpool 34.

The Registrars mention many outbreaks of scarlatina, and epidemics of fever in some of its forms. The high rate of mortality during the three summers is chiefly due to these diseases. Some of the existing sanitary defects are strikingly illustrated by the Registrar of Whitstable in Kent. In Rotherham the deaths were 398 out of a population in 1861 of 44,350. The Registrars call attention to the fever deaths, and to the insufficient supply of water. The mortality is fully accounted for by Dr. Shearman, who explains how the health of the town may be established on solid foundations.

In the face of the cholera epidemic which is gathering in threatening clouds around us, the deaths from that disease and from the allied diarrhoea deserve careful study. Every year since 1837, when the causes of death were first registered, a certain number of deaths from cholera have been recorded in the registers of various districts of the country. Such cases, often called English, but more properly summer cholera, as they are met with all over Europe, prevail chiefly in the three months of July, August, and September. One hundred and thirty-six cholera deaths were registered in London, and in this quarter's notes a certain number are mentioned by the Registrars in every division, except the North Midland. One case at Wilsden in Yorkshire was registered " Asiatic cholera ;" another in the Rillington sub-district, fatal in twenty-four hours, " presented all the features of Asiatic cholera." All such cases are of ordinary occurrence, and are inexplicable by those who deny the spontaneous origin of sporadic cases. The number of cases at Southampton since the end of the quarter leaves no doubt

				Dec. -	1.771	1.713	1.948	2.044	2.008	1.777	1.790	1.864	1.944	2.015	1.885	—	

*Note.*—The three months January, February, March, contain 90, in leap year, 91 days ; the three months April, May, June, 91 days ; each of the last two quarters of the year, 92 days. For this inequality a correction has been made in the calculations, also for the difference between 365 and 365.25 days, and 366 and 366.25 days in leap year.

of the appearance of the epidemic form of cholera, which may either pass over England, or develop in the course of the next twelve months its usual destructive tendency.

It is gratifying to know that London and some of the other large towns are now in a far better condition to encounter the epidemic than they were either in 1848-49 or in 1853-54, when the disease killed 55,181 and 24,516 persons of both sexes and of all ranks in England and Wales.

Cholera, like small-pox, is one of those zymotic diseases which exist in all climates : under favourable conditions their products assume an active form, capable of inducing in other bodies the same morbid changes by which they were generated. They establish the kinship of the human race. Every nation is vitally interested in the sanitary condition of every other nation. Hence the endless discussions about contagion, and as regards cholera the futile vexations of quarantine. There are difficulties in the hypothesis, because experiments cannot be performed on human beings as they are in the laboratory of the chemist, or as they may be in veterinary hospitals ; but for all practical purposes it may be assumed that the discharges of patients in the epidemic, either casually touching the mouth, or entering in dust and vapour through air or water, induce diarrhœa or cholera in a certain proportion of those exposed to their influence. Now London was supplied with the sewage water of a river by several companies in 1848-49 ; all, except one, got their water beyond the reach of the London sewage in 1853-54, and the mortality fell proportionally as the water became purer. At the present time the water of all the companies is comparatively little contaminated by zymotic pollution. The London pumps have also been placed under inspection. The drainage is in rapid progress. Analogy justifies the hope that as the city is purified, and as the means of diffusion are cut off, the destructiveness of the disease will be diminished.

The detection since 1849 of the mode of propagation and of the premonitory stage of cholera by English practitioners are among the greatest triumphs of medical science. For as the surgeon cannot restore the shed blood to the heart, but can tie a ligature round an artery, and stop bleeding, so the physician cannot revivify a man in collapse, or restore the serum of his blood, but he can in nine cases out of ten check diarrhœa turning into cholera.

Cholera throws men into terrible convulsions, and kills half of its victims in twenty-four hours ; but there is a merciful warning of its approaches in probably every instance, the neglect of which is fatal. So it is with the epidemic itself in England. It has hitherto commenced generally about October, and has only proved excessively fatal in the following summer. Thus all our towns have six months notice, and the whole winter for the preparation of defensive works. Every district in the kingdom should at once appoint its Health Officer.

TABLE VI.—Population ; Births and Deaths ; and Annual Birth and Death Rates in last Summer Quarter, in Ten Large Towns.

CITIES, &c.	ESTIMATED POPULATION in the Middle of the Year 1865.	BIRTHS in 13 Weeks ending 30th Sept. 1865.	DEATHS in 13 Weeks ending 30th Sept. 1865. \* The Registration Counties consist of groups of entire Registration Districts ; which Districts are, in general, identical with the Poor Law Unions. As the principle adopted has been to place a District or Union which extends into more than one County with the County in which either the principal town or the greater part of the population is located, the limits of the Registration Counties differ more or less from the boundaries of the counties proper.

MARRIAGES Registered in the Quarters ending 30th June 1863 — 1865 ; BIRTHS and DEATHS  
Registered in the Quarters ending 30th September 1863—1865 ; in the DIVISIONS, REGISTRATION  
COUNTIES, and DISTRICTS of ENGLAND—*continued.*

\* The union of Pontypridd, consisting of parishes taken from the districts of Cardiff (581<sup>a</sup>) and Merthyr Tydfil (582), was formed on 18th July 1863.

† The number of districts is increased to 641 by the formation of the following 18 new districts: Mile End Old Town (24<sup>b</sup>), Dulverton (313<sup>b</sup>), Whitechurch, Salop (363<sup>b</sup>), Birkenhead (460<sup>b</sup>), Great Ouseburn (492<sup>a</sup>), Wetherby (492<sup>c</sup>), Kirkdeighton (492<sup>d</sup>), Wharfedale (493<sup>b</sup>), Kirkstall (500<sup>a</sup>), Holbeck (500<sup>c</sup>), Bramley (500<sup>d</sup>), Hemsworth (504<sup>b</sup>), Castleford (504<sup>c</sup>), Bramham (514<sup>b</sup>), Hartlepool (541<sup>b</sup>), Bedwelty (573<sup>b</sup>), Pontypridd (581<sup>b</sup>), and Gower (585<sup>b</sup>).

*Remarks on the Weather, during the Quarter ending 30th of September 1865. By JAMES GLAISHER, ESQ., F.R.S., &c., Secretary of the British Meteorological Society.*

During the first three weeks of this quarter the weather was unsettled; the temperature of the air was alternately in excess and defect. Rain fell frequently between the 6th and the 18th of July all over the British Islands, and during this period harvest work proceeded very slowly; some complaints were heard of bright mildew. The potato crop which had needed moisture became very promising after the rain. About the 20th of the month the period changed from a cloudy and wet to one clear and dry, which proved most beneficial to the growing as well as to the maturing crops. Till the 30th day the temperature was in excess to the amount of  $2^{\circ}$  daily. On the 31st the weather changed again to cold and wet; harvest work was a good deal interrupted, and up to this time no mention was made of the potato disease; but, in the first week of August indications of the disease were seen both in Ireland and England. The weather continued unsettled, rain fell heavily in various parts of the country, and the deficiency of daily temperature amounted to  $3^{\circ}$  daily. Harvest work for several days together was stopped, and much uneasiness was felt as to the crops being greatly damaged, as by far the larger portion of those of the United Kingdom was still standing. The potato crop also displayed increased symptoms of disease. On the 20th day the weather improved a little, rain fell, and there were intervals of bright sunshine. From the 20th day to the end of the month the temperature was in excess to the amount of  $1^{\circ}$  daily. The month of August was very unfavourable to the crops.

With the month of September came an auspicious change, the temperature was high, there was but little cloud, either night or day; the sun shone with great brilliancy, harvest work proceeded simultaneously over England, Ireland, and Scotland. In many places very little rain fell, not amounting in the whole month to one-tenth of an inch; the greatest fall at any place was  $1.9$  in. at Cockermouth in Cumberland. The reading of the barometer was remarkably high. The temperature frequently exceeded  $80^{\circ}$  at places south of  $53^{\circ}$  latitude, and in some cases to  $85^{\circ}$ ,  $86^{\circ}$ , and  $87^{\circ}$ . The average daily excess of temperature for the whole month was  $7\frac{1}{4}^{\circ}$ , and proved to be the hottest month of the year.

In consequence of this remarkable weather, the cereal harvest was completed in every part of the United Kingdom earlier than it has been for many years past. The yield of the wheat crop was spoken of as variable both in quality and quantity, and was thought to fall somewhat short of an average.

The barley crop was the largest of the cereals. At the end of the month rain was much needed to assist the working of the plough, and for cattle, as many ponds were dried up.

The mean temperature of these three months was  $62^{\circ}.5$ ; in the year 1859 for the same period it was  $62^{\circ}.8$ ; in 1857 was  $63^{\circ}.3$ ; in 1846 it was  $62^{\circ}.6$ ; in 1825 was  $62^{\circ}.3$ ; in 1818 was  $63^{\circ}.5$ ; in 1780 was  $62^{\circ}.7$ , and in 1779 was  $63^{\circ}.2$ . In all other years back to 1771 it was below  $62^{\circ}$ .

The mean temperature of July was  $63^{\circ}.8$ , being  $2^{\circ}.1$  above the average of the preceding 24 years, and  $2^{\circ}.0$  above that of last year.

The mean temperature of August was  $59^{\circ}.9$ , being  $1^{\circ}.4$  below the average of the preceding 24 years, and  $0^{\circ}.3$  above that of last year.

The mean temperature of September was  $63^{\circ}.9$ , being  $7^{\circ}$  above the average of the preceding 24 years, and  $7^{\circ}$  above that of last year.

The temperature of September was remarkable indeed; back to 1771 there is no instance of one so warm; the nearest approach to this high temperature was  $60^{\circ}.3$  in 1858;  $60^{\circ}.1$  in 1846;  $60^{\circ}.7$  in 1818;  $62^{\circ}.3$  in 1815;  $60^{\circ}.8$  in 1795; and  $60^{\circ}.7$  in 1779; so that this month is more than  $1\frac{1}{2}^{\circ}$  of higher temperature than any on record.

Equally, if not more remarkable, is the average temperature of the six months ending September, which, notwithstanding the low temperature in August, which was  $1\frac{1}{4}^{\circ}$  nearly below its average, the period ranks higher than any on record. The mean temperature of the six months from April 1865 to September 1865 is  $59^{\circ}.37$ ; in 1859 for the same period it was  $58^{\circ}.23$ ; in 1857 it was  $58^{\circ}.58$ ; in 1846 it was  $59^{\circ}.13$ ; in 1818 was  $58^{\circ}.58$ ; in 1775 it was  $58^{\circ}.1$ ; and there is no other instance back to 1771 of a temperature reaching  $58^{\circ}$ . The only one closely approximate to the period just passed was in 1846, which was nearly  $0^{\circ}.2$  lower; still this difference, though small, is considerable, considering the period is one half of a year.

The mean high day temperatures were above their averages in July and September, to the amounts of  $2^{\circ}.0$  and  $9^{\circ}.1$ ; and below it in August to the amount of  $1^{\circ}.9$ .

The mean low night temperatures were above their averages in July and September to the amounts of  $1^{\circ}.5$  and  $4^{\circ}.8$ , and below it in August to the amount of  $1^{\circ}.6$ .

Therefore both the day and night temperatures were above their averages in July and September, and were both below in August. The excess of  $9^{\circ}$  by day and  $5^{\circ}$  by night in September are very remarkable, in both cases being higher than any before met with.

During the high temperature in September there was less than one half the usual amount of cloud; the air was bright and clear; there was no meteorological choleraic symptom whatever, and indeed there has been none in the exceptional period of six months from April.

The mean temperature of the air at Greenwich in the three months ending August, constituting the three summer months, was  $61^{\circ}.3$ , being  $1^{\circ}.2$  above the average of the preceding 94 years.

The daily ranges of temperature in July and August were nearly of their average values; in September they averaged  $23^{\circ}$  nearly, and were  $4\frac{1}{2}^{\circ}$  above their usual value.

The fall of rain in August exceeded its average by  $1\frac{1}{4}$  inch; in September was nearly  $2\frac{1}{4}$  inches less than the average for that month; and in the quarter was one seventh part deficient.

The pressure of the atmosphere was below its average, both in July and August, but exceeded it in September by  $\frac{1}{4}$  of an inch. The reading of the barometer in this month was higher than any on record in September, and was higher than in any month since February.

NOTE.—In reading this table it will be borne in mind that the sign (—) minus signifies below the average, and that the sign (+) plus signifies above the average.

Thunder storms occurred or thunder was heard and lightning was seen on July 6th, 7th, 8th, 9th, 10th, 11th, 12th, 16th, 17th, 18th, 19th, and 24th. On August 1st, 2d, 3d, 6th, 7th, 10th, 11th, 12th, 13th, 16th, 23d, and 24th. On September 9th.

Thunder was heard but lightning was not seen on July 4th, 7th, 8th, 9th, 10th, 11th, 16th, 17th, 18th, 19th, 20th, 22d, 24th, 27th, 28th. On August 1st, 2d, 3d, 6th, 7th, 10th, 11th, 12th, 13th, 16th, 18th, 22d, and 24th. On September 9th and 28th.

Lightning was seen but thunder was not heard on July 9th, 16th, 17th, 18th, 19th, 21st, 22d, and 26th. On August 1st, 2d, 3d, 10th, 11th, 12th, 13th, 16th, 22d, 23d, 24th, and 27th. On September 9th, 15th, 16th, and 27th.

At Eccles on 8th July, during a thunder storm, a horse was killed by the electric fluid near Peel Park, Salford, whilst passing with a cab. On the same day the electric fluid entered a house in Manchester, but did no damage.

Solar halos were seen on 5th July at Clifton and Grantham; on the 19th, 20th, and 21st at Oxford; on the 22d at Clifton; and on the 30th at Oxford. On the 6th at Brighton; on the 9th at Brighton and Oxford; on the 20th at Wisbeach; on the 21st at Clifton and Oxford; and on the 27th at Oxford. On 7th September at Penketh; on the 16th at Brighton and Wisbeach; on the 21st at Hawarden; and on the 22d at Brighton and Penketh.

Lunar halos were seen on 7th July at Truro; and on the 10th at Oxford. On the 10th August at Oxford. On the 30th September at Helston.

Auroræ were seen on 2d August at Clifton, Diss, and Cockermouth; on the 3d at Clifton; on the 20th at Brighton and Hawarden; on the 25th at Cockermouth; on the 26th at Cardington, Bedford, Hawarden, Cockermouth, and Culloden; and on the 28th at Culloden. On 17th September at Hawarden.

Hail fell on 6th July at Clifton and Abington; on the 7th at Belvoir; on the 8th at Manchester; on the 10th at Streatley; and on the 19th at Carlisle. On 1st August at Oxford; on the 2d at Llandudno and Hawarden; on the 3d at Aldershot, Streatley, Great Berkhamstead, and Ensleigh; on the 6th at Liverpool; on the 16th at Llandudno and Hawarden; and on the 24th at Clifton and Apsley. On 21st September at Cardington.

Fog was prevalent on 40 days during the quarter. On July 4th, 8th, 18th, 24th, 26th, and 27th. On August 2d, 3d, 8th, 17th, 19th, 20th, 21st, 22d, 23d, 24th, 26th, 27th, 28th, and 31st. On September 1st, 3d, 4th, 5th, 6th, 7th, 12th, 13th, 14th, 16th, 17th, 18th, 19th, 20th, 25th, 26th, 27th, 28th, 29th, and 30th.

At Guernsey the mean temperature of the air in July was equal to the average of 21 years; in August it was 1·3 below, and in September 4·6 above their respective averages. The amounts of rain in July, August, and September were ·01 in. below, 1·4 in. above, and 2·77 in. below their respective averages. About half the amount of rain collected in July fell in one night. The number of rainy days in July and September were below their respective averages to the amounts of 3·6 and 10. The weather in August was variable and stormy, but not unfavourable for the harvest. This September has been the hottest since 1846, and by far the driest for 22 years.

At Great Berkhamstead the month of July was mostly fine and hot from the 5th to the 18th; there were heavy thundershowers which proved serviceable to vegetation; rain fell heavily on the last day. The weather was rainy and unsettled throughout August, and the rainfall is above the

average. On the evening of the 24th between 6h. and 8h. there was a violent thunderstorm and waterspout five miles east of this place; only a light shower fell here. September was very warm and dry, nearly all the rain having fallen on the 21st. The mean maximum temperature for the month is the highest recorded since July 1859; the nights were also warm with heavy dews.

At *Derby* the rainfall in September was less than has fallen there in any other month since regular observations have been taken. The mean of the last 24 years for September is 2.4 inches. The high temperature of the month is equally remarkable, as the following figures show. The average reading of the maximum thermometer in September for 21 years is  $63^{\circ} \cdot 2$ , of the minimum during the same period  $46^{\circ} \cdot 8$ . The mean maximum and minimum readings for the present month were  $72^{\circ}$  and  $52^{\circ}$  respectively. On two occasions this September the maximum rose to  $82^{\circ}$ , but in no instance in the above period did it exceed  $76^{\circ}$ , and only once reached that point.

At *Silloth* the highest reading of the thermometer in the shade this summer occurred on the 8th September; and the highest reading of the thermometer in the sun this summer was observed on the 15th.

At *Cockermouth*, July was a month of fine summer weather, nearly of the same mean temperature, but not so dry as the preceding month. September was a month of hot and dry weather. Rain fell on five days only, and more than  $\frac{3}{4}$ ths of the entire amount falling in thirteen hours, during the night between the 9th and 10th. On the 15th the temperature in the shade reached  $81^{\circ} \cdot 3$ , being exactly the same as on the 18th of June, the hottest day during the summer. The heat in the rays of the sun was not, however, so great.

At *Culloden* the mean temperature of July was above the average, and there was some fine hot weather during the month. There were several heavy falls of rain, the most remarkable occurring on the 7th; when between 8h. 10m. A.M. and 8h. 14m. P.M. of that day there fell 2.16 inches, and by 8h. A.M. on the 8th this large amount was increased by 0.77 inch, making the total fall in twenty-four hours amount to 2.93 inches. The wind during this time blew gently from the N.E. to E.N.E., and veering to E.S.E. There had been thunder on the previous day (the 6th), followed by a thick fog at night. The mean temperature of August was below the average, and the weather was unsettled and showery, to the frequent interruption of the harvest. The weather throughout the month of September has been exceedingly fine, bright, and sunny, and unusually dry and hot, the mean temperature being  $2^{\circ} \cdot 69$  above that of the previous month (generally the hottest month of the year), slightly in excess of July, and considerably higher than the average temperature of any previous September within the last twenty-six years.

At *Wisbeach* the harvest commenced generally on 31st July. Red wheat this year produces a better grain than the white; beans well podded. The wheat is not of an average quality. Oats generally light. Root crops and pasture, good. Apples are barely equal to an average. Pears, plums, and wall fruit abundant.

At *Belvoir* harvest operations commenced early in August. Wheat and peas were first ready for the sickle. Rainy weather retarded harvest work, and it was proceeded with throughout the month as opportunities offered. As wheat was exposed, after ripening, to much bad weather, its quality was deteriorated. Barley was damaged in quality by being stained by wet. Oats, not a large crop, also injured by wet. Turnip crop made a healthy growth in August. Wurzel good. Potato disease appeared on the 25th of August, spread rapidly; deficient heat and excess of wet evidently the cause of the malady. Stock doing well, and free from disease; sheep healthy. The unbroken and marvellously fine weather which prevailed throughout September was the drawback of excessive dryness. Early in the month the wheat, barley, and oats, left out in consequence of bad weather in August, were carried. Towards the end of the month the dryness seriously affected turnips, and mildew and fly were destructive. Pastures lost their verdure, and though wonderfully full of grass in August, became bare in September. The potato disease more virulent and general than usual; three fourths of the crop having rotted. Stock healthy.

At *Penketh* several fields of wheat were cut before the end of July, but the wheat harvest was not general. Barley was cut at Hale, about 12 miles further down the river, on the 24th, but there was none cut in this neighbourhood before the 1st of August. The grain crops here generally are very healthy, and the yield quite up to the average; but in Cheshire, on light sand soils, I have seen wheat very much diseased. Root crops have suffered very much from drought, but are now doing well. The fine weather which prevailed in September has been very unfavourable to root crops in this neighbourhood; turnips are very poor, and have suffered much from the ravages of insects, while the disease, which made its appearance about the middle of the month, has prevailed to a considerable extent among the potato crop.

At *Eccles* the wet weather during August delayed the gathering in of the harvest, though none of it appears to much extent damaged.

At *Cockermouth* the hay crop, which was generally very abundant, mostly secured in good condition by the end of July. Harvest began about the 3d of August, and became general by the middle of the month, the grain being mostly cut by the beginning of September, and all carried by the end of the first week. Crops about an average in this neighbourhood. The potato disease appeared about 10th September, and the farmers are now apprehensive of its being more extensive than last year.

At *Silloth* harvest work was completed about a fortnight earlier than usual. Cereal crops fully an average. Turnips and potatoes good; a little disease among the latter.

At *Culloden*, in consequence of the very fine weather in September, the harvest has been secured in excellent condition, but the dry hot weather of the summer has occasioned considerable deficiency in the bulk and "return" of the grain crops; this remark applies particularly to barley and oats. Potatoes have escaped disease, and promise well, but turnips have everywhere suffered from the long continued dry weather, and mildew is very prevalent.

The Observations have been reduced to Mean values by Glaisher's Barometrical and Diurnal Range Tables, and the Hygrometrical results have been deduced from his second edition of Hygrometrical Tables.

Bath-sea. — All the maximum and minimum readings are erroneous.  
Banbury. — August and September, — the wet bulb thermometer readings taken at 3h P.M. have not been used, they are evidently wrong; those in the morning, which have been used, seem too close to those of the dry thermometer.  
Hartwell. — The temperature of the dew point seems to be too close to the temperature of the air; from them it would seem that Hartwell is the most humid place in the country, which it is not.  
Cardington and Bedford. — In September the air was remarkably dry, the result at the one place confirming that at the other.  
Leeds. — Barometer reading, 6th May at 10h. A.M., was altered from 28.650 in. to 29.650 in.  
Carlisle. — The temperature of the dew point in September seems to be too high, making the degree of humidity too great.  
The returns from Oxford and Castleton Moor were received too late for the insertion of their results in the Quarterly Table.  
Second Rain-gauges are placed — At Ensliegh Lansdowne (Bath), at 50 feet above the ground, the amount collected was 7.7 inches; at Aldershot, 25 feet, 5.2 inches; at Clifton, 50 feet, 11.6 inches; at Guildhall, 77 feet, 8.1 inches; at Cardington, 36 feet, 6.6 inches; at Diss, 6 feet, 9.0 inches; at Wisbeach, 8 feet, 6.2 inches; at Cockermouth, 65 feet, 7.9 inches; at Allenheads, 61 feet, 7.5 inches; at Miltown Banbridge, Ireland, 40 feet, 3.9 inches, and at the Bann Reservoir (Ireland), latitude 54° 15' N., longitude 6° 2' W., and 440 feet above the level of the sea, 7.7 inches.  
ERRATA. — In the quarter ending June 1865, page 10, Second Rain-gauge note, 2d line, at Cockermouth, for 13.1 inches read 7.0 inches.  
page 11, 1st note to Quarterly Table, 5th line, for Greenwich, 7.2 inches; and Barnstable, 7.0 inches, read Cockermouth, 7.6 inches; and Greenwich, 7.2 inches.

NAMES OF STATIONS.	Mean Pressure of dry Air reduced to the level of the Sea.	Highest Reading of the Thermometer.	Lowest Reading of the Thermometer.	Range of Temperature in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation.	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Maximum in Rays of Sun.	Mean Reading of Minimum on Grass.	WIND.				Mean Amount of Ozone.	Mean Amount of Cloud.	RAIN.		
																		Relative Proportion of						Number of Days on which it fell.	Amount collected.

## REGISTRARS' NOTES.

*In compliance with the following instruction, remarks have in many instances been appended by the Registrars to their Returns; from which the following Notes have been selected. The Registrars alone must be considered responsible for the opinions which they express.*

### INSTRUCTION TO REGISTRARS:—

"If the Deaths registered during the quarter have been above or below the average, state whether, in your opinion, the fact is wholly or partially accounted for by sanitary arrangements, by increase or decrease of population, the weather, Small-pox, Measles, Scarlatina, Whooping-cough, Fever (including typhus, typhoid, relapsing, infantile fever), Cholera, Diarrhœa (including bowel complaint), Dysentery, Bronchitis, or other disease. Also with regard to increase or decrease of Births, you may mention any circumstance to which it may be attributed. By 'Average' must be understood *not* the average of numbers in other quarters of the year, but the average of *corresponding* quarters in four or five previous years."

The figures prefixed refer to the numbers of the District and Sub-District. The name of the District is in SMALL CAPITALS, that of the Sub-district in *italics*.

## II. SOUTH-EASTERN COUNTIES.

### 2. KENT (*extra-metropolitan*).

58; 4. MAIDSTONE; *West*. — Births 73; Deaths 76. The deaths are 11 above the average. Scarlatina has been prevalent amongst children.

58; 5. MAIDSTONE; *East*. — Births 137; Deaths 100. The deaths are much above the average. Scarlatina has been very prevalent during the quarter; there were 10 deaths from it.

65; 1. CANTERBURY; *Canterbury*. — Births 96; Deaths 111. The increase of deaths over the births is to be attributed to the prevalence of small-pox.

66; 3. BLEAN; *Whitstable*. — Births 70; Deaths 33. In a letter dated 28th August 1865, Mr. Amos, the Registrar of Whitstable, writes to the Registrar-General as follows:—

"In consequence of the continued complaints made to me by the inhabitants, of the bad sanitary state of the town of Whitstable (which includes the parishes of Whitstable and Seasalter), I am induced to lay the following statement before you.

"There exist in the heart of the town open dykes, so foul and offensive that the inhabitants of the houses near them inform me that they are compelled to close their windows and doors to keep out the stench. The sewage from the town is also allowed to lie and fester on the dry mud in the harbour, where the stench is at times intolerable, and this is caused by a defective drain. Then there are foul and offensive exposed cesspools and open drains, or drains without stench traps. On both occasions when the cholera last visited us Whitstable suffered frightfully, and the cases were almost wholly confined to that part of the town where the drainage was defective, and where such nuisances as the above were allowed to accumulate.

"We have no local authority in the town, although it numbers over 5,000 inhabitants.

"For some years after the passing of the Nuisances Removal Act, Sanitary Committees were appointed in the two parishes, who strenuously set to work, and got the place in a good sanitary condition; but about four years since, in consequence of neglect in one year to appoint the committee in time, the Guardians of the Blean Union availed themselves of the power given them under the Nuisances Amended Act, and appointed a paid sanitary inspector. Since which time I believe no inspection has taken place whatever, and hence the now bad condition of the town. Recently, I took proceedings myself before the justices for the abatement of a great nuisance, which had existed for months, in one of the streets, although complaints had been made to the inspector. The justices made an order of abatement, and proper drains were laid down, and the nuisance removed. But the justices reside at Canterbury, six miles off, and the costs of taking out the summons, and appearing to support, fell on me, besides the loss of two days; and in consequence of such expense and trouble individuals are deterred from taking the matter into their own hands.

"In the event of cholera breaking out here, the same lamentable results as happened before will probably occur again, unless something is done in the way of sanitary improvement.

"The sanitary inspector should be compelled to inspect and report to the Guardians; and no doubt the Guardians would take the necessary proceedings to get rid of the nuisances complained of. Still nothing can supersede the necessity of a duly authorized committee of the town to enforce the provisions of the Nuisances Removal Act. The mortality during the last 18 months has exceeded that of other years. How far this excess is to be attributed to the state of things which I have described I cannot say."

### 3. SUSSEX.

80; 3. TICEHURST; *Wadhurst*. — Births 28; Deaths 27. This return of deaths exhibits an excess of 10 over the average of four corresponding quarters, in consequence of scarlatina, which was fatal in 14 cases.

84; 3. LEWES; *Lewes*. — Births 75; Deaths 59. There were 6 deaths from small-pox.

### 4. HAMPSHIRE.

97; 1. ALVERSTOKE; *Alverstoke*. — Births 206; Deaths 150. The deaths are considerably above the average. The mortality has been heavy amongst old people.

101; 1. CHRISTCHURCH; *Christchurch*. — Births 70; Deaths 56. A woman died at the age of 103 years. She was the daughter of a farmer.

105; 1. SOUTHAMPTON; *Southampton*. — Births 404; Deaths 338. The births have been 18 above the average of the corresponding quarter in the previous five years, and the deaths have been 107 above the same average. 57 deaths were from scarlatina; 50 from diarrhœa; 4 from cholera. The following are the deaths from cholera: infantile cholera at the age of two months; summer cholera at 10 years of age; cholera spasmodica at 24 years; Asiatic cholera at 62 years.

### 5. BERKSHIRE.

120; 2. NEWBURY; *Newbury*. — Births 50; Deaths 59. The deaths are greatly above the average, which must be attributed to scarlatina being very prevalent in the district. The deaths from that complaint were 26.

122; 3. FARINGDON; *Buckland*. — Births 42; Deaths 29. Scarlatina is less virulent, but has not disappeared from this district. 8 deaths were from that cause, and it is remarkable that the disease prevails most in those places which are in the best sanitary condition.

## III. SOUTH MIDLAND COUNTIES.

## 11. HUNTINGDONSHIRE.

176; 1. HUNTINGDON; *Ramsey*. — Births 50; Deaths 28. Of the 28 deaths registered one was from cholera and 6 from diarrhœa. This sub-district was unhealthy in September. Cholera and diarrhœa have been very prevalent; epidemic in Ramsey.

178; 1. ST. NEOTS; *St. Neots*. — Births 76; Deaths 57. The unusual heat of the weather has produced much diarrhœa. Scarletina has been particularly prevalent and fatal. It caused 10 deaths.

## 13. CAMBRIDGESHIRE.

189; 5. NEWMARKET; *Soham*. — Births 84; Deaths 59. Diarrhœa has been very prevalent in my district; and a great many cases assumed quite a choleraic character, though speedily yielding to treatment. The epidemic is now very much on the decline.

190; 1. ELY; *Haddenham*. — Births 35; Deaths 32. The deaths are double the average of four corresponding quarters. Most of them were among children. Whooping-cough has been very prevalent.

191; 1. NORTH WITCHFORD; *Chatteris*. — Births 66; Deaths 39. 11 deaths were from diarrhœa.

193; 4. WISBECH; *Terrington St. Clement*. — Births 39; Deaths 30. Scarletina rather more prevalent than usual; 7 deaths occurred from it. The weather has been extremely hot.

## IV. EASTERN COUNTIES.

## 14. ESSEX.

194; 2. WEST HAM; *West Ham*. — Births 323; Deaths 182. 14 deaths were from typhus; 24 from diarrhœa; one from cholera.

197; 3. ROMFORD; *Barking Town*. — Births 56; Deaths 41. There is an increase of deaths over the average of the September quarter for the last five years. Scarletina was fatal in 8 cases; diarrhœa in 11; English cholera in one.

198; 1. ORSETT; *Grays*. — Births 67; Deaths 45. The deaths are much over the average on account of scarlatina.

202; 1. MALDON; *Southminster*. — Births 41; Deaths 28. The drains and cesspools are still very bad, nothing having been done to them.

## 15. SUFFOLK.

222; 1. IPSWICH; *St. Matthew*. — Births 110; Deaths 101. 22 deaths were from diarrhœa; one from English cholera.

222; 3. IPSWICH; *St. Margaret*. — Births 107; Deaths 85. The deaths are above the average. Diarrhœa has been fatal in 14 cases, principally amongst children.

227; 2. MUTFORD; *Lowestoft*. — Births 143; Deaths 92. The deaths are above the average. Diarrhœa prevailed to a great extent in consequence of the unusual heat of the weather.

## 16. NORFOLK.

234; 5. NORWICH; *West Wymer*. — Births 198; Deaths 222. The mortality of my sub-district is very heavy, and is nearly double the average of corresponding quarters for the last five years. The deaths from pulmonary complaints are 31; infantile diarrhœa 41; measles 12; scarlatina 10; diphtheria 2; and fever 6.

238; 2. LODDON; *Loddon*. — Births 37; Deaths 35. Deaths greatly above the average. 8 occurred from typhus and typhoid fever.

239; 3. DEPWADE; *Stratton*. — Births 42; Deaths 23. A death occurred at the age [as stated] of 102 years.

249; 1. THETFORD; *Methwold*. — Births 53; Deaths 51. 10 deaths (all of children) were from scarlatina.

## V. SOUTH-WESTERN COUNTIES.

## 17. WILTSHIRE.

250; 2. HIGHWORTH; *Swindon*. — Births 130; Deaths 64. A child, four years old, died from eating nightshade berries. 4 deaths occurred from small-pox, 2 of which occurred to subjects who had been vaccinated.

259; 3. WESTBURY; *Westbury*. — Births 54; Deaths 45. The deaths exceed the average; 17 were caused by scarlatina.

## 18. DORSETSHIRE.

276; 2. SHERBORNE; *Sherborne*. — Births 54; Deaths 42. 9 deaths occurred from scarlatina.

## 19. DEVONSHIRE.

288; 1. EAST STONEHOUSE; *East Stonehouse*. — Births 135; Deaths 93. 12 deaths were from measles; 14 from diarrhœa; one from cholera.

295; 1. BARNSTAPLE; *Barnstaple*. — Births 85; Deaths 75. The deaths are much above the average; small-pox and measles having been very prevalent.

## 20. CORNWALL.

311; 5. PENZANCE; *St. Just in Penwith*. — Births 106; Deaths 75. The deaths are 25 in excess of the average of five September quarters. There were 10 deaths from fever; and 10 on which inquests were held.

## 21. SOMERSETSHIRE.

321; 2. FROME; *Frome*. — Births 95; Deaths 72. The deaths were above the average. 16 were from scarlatina, which has been prevalent in the sub-district.

## VI. WEST MIDLAND COUNTIES.

## 22. GLOUCESTERSHIRE.

344; 2. CHELTENHAM; *Cheltenham*. — Births 265; Deaths 181. I have registered 8 or 9 cases of small-pox during the quarter.

## 25. STAFFORDSHIRE.

379; 4. WOLVERHAMPTON; *West*. — Births 297; Deaths 127. During the quarter 18 deaths occurred from diarrhœa amongst very young children; 12 deaths were from scarlatina. The authorities are taking active measures to cleanse and purify close and thickly populated courts, of which there are several in different parts of my sub-district.

379; 6. WOLVERHAMPTON; *Willenhall*. — Births 297; Deaths 169. Fever and diarrhœa have raised the mortality above the average.

379; 7. WOLVERHAMPTON; *Bilston*. — Births 260; Deaths 190. The deaths are slightly over the average. There were 38 deaths from diarrhœa, 2 from English cholera, 22 from scarlatina and typhoid fever.

382; 3. DUDLEY; *Sedgley*.—Births 440; Deaths 242. The deaths are 26 above the average, and 35 less than in the corresponding quarter of 1864. 12 deaths occurred from typhus and typhoid fever; from scarlatina 21; infantile diarrhoea 39; English cholera one.

382; 4. DUDLEY; *Dudley*.—Births 486; Deaths 248. The deaths are 19 more than the average. Diarrhoea caused 34 deaths; fever 33.

## 26. WORCESTERSHIRE.

387; 2. WORCESTER; *North*.—Births 86; Deaths 83. The deaths in the quarter have been about the average. Diarrhoea has been very prevalent in the last month. Adults have been affected, and many children have died. We have measles and scarlatina again in the town.

388; 2. UPTON-ON-SEVERN; *Upton-on-Severn*.—Births 32; Deaths 29. There are 6 deaths from small-pox.

## 27. WARWICKSHIRE.

394; 1. BIRMINGHAM; *Lady Wood*.—Births 391; Deaths 203. Diarrhoea caused 57 deaths.

394; 4. BIRMINGHAM; *St. Peter*.—Births 129; Deaths 111. Deaths somewhat over the average. Diarrhoea caused 20 deaths, being double the average owing to the long continued hot weather.

394; 8. BIRMINGHAM; *St. George*.—Births 470; Deaths 288. There were 75 deaths from diarrhoea.

395; 1. ASTON; *Deritend*.—Births 440; Deaths 236. The deaths are about 20 per cent. above the average, which I attribute partially to increase of population, but chiefly to the prevalence of infantile diarrhoea, of which there have been more than 50 cases registered.

395; 2. ASTON; *Duddeston*.—Births 455; Deaths 274. From diarrhoea 59 deaths have taken place during the quarter, one from English cholera, and 3 from small-pox.

# VII. NORTH MIDLAND COUNTIES.

## 28. LEICESTERSHIRE.

412; 1. HINCKLEY; *Burbage*.—Births 35; Deaths 22. I have not registered a single death in the quarter in the parish of Burbage, which contains nearly 1,900 inhabitants.

417; 1. LEICESTER; *East Leicester*.—Births 508; Deaths 369. The deaths for the third quarter of 1865 show an excess of 41 above those of 1864. This may be accounted for by diarrhoea alone, the deaths from which in 1865 being 128, but in 1864 only 89. Of the 128 deaths, 106 were those of children one year old or less.

417; 2. LEICESTER; *West Leicester*.—Births 295; Deaths 200. There were 47 deaths from diarrhoea.

## 30. LINCOLNSHIRE.

423; 4. SPALDING; *Spalding*.—Births 88; Deaths 72. In consequence of the prevalence of scarlatina during the whole of this quarter, the deaths are much increased. I registered the deaths of 35 children and one adult from that cause alone. The average number from all causes in three corresponding quarters was 43.

424; 2. HOLBEACH; *Long Sutton*.—Births 59; Deaths 39. Nearly one fourth of the deaths is from diphtheria, and all of these occurred at Sutton Bridge, with but one exception. Good drainage is wanted.

427; 3. GRANTHAM; *Grantham*.—Births 139; Deaths 133. The deaths are considerably above the average. Typhoid fever has been fatal in 24 cases, and diarrhoea in 16. In the lower part of the parish of Spittlegate sanitary arrangements have been much neglected. Also in the parish of Great Gonerby, where fevers are very prevalent, proper measures are much needed. At the present time a medical man reports 20 cases as having occurred in a yard in the village.

428; 2. LINCOLN; *Lincoln Home*.—Births 250; Deaths 200. The deaths in the past quarter have been considerably above the average. Diarrhoea was fatal in 20 cases; typhus and typhoid fever in 18.

432; 1. CAISTOR; *Great Grimsby*.—Births 192; Deaths 140. The deaths are above the average, owing to the prevalence of diarrhoea amongst young children.

## 31. NOTTINGHAMSHIRE.

436; 1. WORKSOP; *Worksop*.—Births 101; Deaths 71. The deaths have been considerably above the average of corresponding quarters of the last five years, the numbers in which were respectively, 25, 36, 40, 41, 40. The excess may be chiefly accounted for by the weather. 25 children died under one year of age.

440; 3. NOTTINGHAM; *St. Ann*.—Births 191; Deaths 172. The births are exactly the average for the five previous corresponding quarters. The deaths are 37 in excess, which I attribute to the mortality amongst infants, the chief cause being diarrhoea.

440; 4. NOTTINGHAM; *Byron*.—Births 102; Deaths 106. The deaths are above the average. From scarlatina there were 13 deaths; from diarrhoea 18.

442; 2. NEWARK; *Bassingham*.—Births 26; Deaths 4. The deaths in this quarter are only 4; the smallest number I remember to have occurred. I have never known such an absence of epidemic diseases as during this summer.

## 32. DERBYSHIRE.

445; 1. DERBY; *St. Alkmund*.—Births 156; Deaths 87. Several cases of fever occurred in the sub-districts and 19 deaths from diarrhoea, which were those of young children, all except two.

446; 3. BELPER; *Belper*.—Births 88; Deaths 60. Fever and small-pox have been prevalent but not very fatal; the deaths from fever were 4, from small-pox 2.

# VIII. NORTH-WESTERN COUNTIES.

## 33. CHESHIRE.

452; 3. STOCKPORT; *Heaton Norris*.—Births 134; Deaths 101. Diarrhoea has been very prevalent during the quarter, the deaths attributed to this disease being 35.

453; 2. MACCLESFIELD; *Bollington*.—Births 77; Deaths 32. Deaths much below the average. Scarlatina has prevailed very much, but was of a very mild nature. The district of Bollington under the Local Board has been extensively drained, and in cottages private works of the same kind have been carried out.

453; 4. MACCLESFIELD; *East Macclesfield*.—Births 88; Deaths 60. 7 deaths from small-pox.

459; 2. GREAT BOUGHTON; *Chester Castle*.—Births 203; Deaths 173. The average number of deaths for the five corresponding quarters is only

III. The increase is chiefly caused by the prevalence of scarlatina and other fevers, and of diarrhœa.

### 34. LANCASHIRE.

461; 1. LIVERPOOL; *St. Martin*.—Births 863; Deaths 721. The deaths caused by diarrhœa this quarter are 169.

461; 2. LIVERPOOL; *Howard Street*.—Births 232; Deaths 273. The deaths in my sub-district are 9 below the average of corresponding quarters of the last four years. Diarrhœa has been fatal in 68 cases.

461; 3. LIVERPOOL; *Dale-street*.—Births 228; Deaths 244. I have to report the large number of 49 deaths from diarrhœa, which is more than usual even at this season, a great proportion being those of young children. Typhus was rather prevalent at the commencement of the quarter, but has now abated. The total number of deaths is about the average. The births are below the average, which may in some measure be accounted for by houses being pulled down, and offices and warehouses erected in their place.

461; 6. LIVERPOOL; *Mount Pleasant*.—Births 460; Deaths 760.—From diarrhœa there were 33 deaths; from typhus, 158; and from small-pox, 12.

462; 6. WEST DERBY; *West Derby*.—Births 660; Deaths 346.—The deaths are 61 more than the average of the four corresponding quarters. This increase is attributable to the great prevalence of diarrhœa (especially amongst children), which was fatal in 73 cases. 2 from English cholera.

463; 3. PRESCOT; *Huyton*.—Births 31; Deaths 13. One death from malignant cholera.

464; 5. ORMSKIRK; *North Meols*.—Births 133; Deaths 106. The average number of deaths for this quarter in five years is 82. From diarrhœa and English cholera 18 deaths were registered.

465; 3. WIGAN; *Wigan*.—Births 370; Deaths 267. There were 48 deaths from diarrhœa.

467; 4. LEIGH; *Atherton*.—Births 136; Deaths 78. Deaths below the average. There were 22 from diarrhœa, 2 from cholera.

468; 10. BOLTON; *Little Bolton*.—Births 305; Deaths 238. The deaths are about 40 per cent. above the average. The fatal cases of diarrhœa and cholera (chiefly amongst infants) are 63; of measles 22. I attribute the great increase of diarrhœa to the extreme heat of the weather.

468; 11. BOLTON; *Bolton Eastern*.—Births 235; Deaths 191. Deaths 20 above the average. Deaths from measles 20; from diarrhœa 34; cholera infantile 5; cholera English 5.

469; 2. BURY; *Tottington Lower End*.—Births 47; Deaths 31. Diarrhœa has been very prevalent in the last quarter, especially amongst children; but it is now fast subsiding.

469; 7. BURY; *Bury North*.—Births 140; Deaths 111. From diarrhœa 34 deaths.

470; 2. BARTON-UPON-IRWELL; *Barton*.—Births 104; Deaths 92. 22 deaths occurred from diarrhœa.

471; 1. CHORLTON; *Didsbury*.—Births 68; Deaths 95. The return shows an increase of 17 deaths. 14 deaths were from typhus, which was epidemic.

471; 3. CHORLTON; *Chorlton-upon-Medlock*.—Births 431; Deaths 279. The deaths are little more than the average. No disease has extensively prevailed except diarrhœa, of which 75 cases have been registered, and these, with a few exceptions, have all been infantile.

472; 4. SALFORD; *Regent Road*.—Births 319; Deaths 300. The deaths are 63 above the average of corresponding quarters in the last five years. The great number from diarrhœa will, in great measure, account for the excess. With very few exceptions the deaths from diarrhœa, being 87, were those of children under two years of age. 154 children died under five years of age. A death from cholera occurred after 16 hours' illness.

473; 1. MANCHESTER; *Ancoats*.—Births 496; Deaths 509. Deaths above the average. There were 159 from diarrhœa.

473; 2. MANCHESTER; *Deansgate*.—Births 229; Deaths 206. The almost entire absence of scarlatina which prevailed greatly some time ago is striking. The deaths from diarrhœa were 71. They were in July 33; in August 28; in September 10. The dwelling houses are being rapidly displaced by warehouses.

473; 3. MANCHESTER; *London Road*.—Births 214; Deaths 258. The deaths exceed the births by 44. From diarrhœa there were 70: viz., in July 33; August 24; September 13.

473; 5. MANCHESTER; *St. George*.—Births 512; Deaths 414. Diarrhœa caused 96 deaths; measles 21; scarlatina 10.

473; 6. MANCHESTER; *Newton*.—Births 192; Deaths 140. From diarrhœa 31 deaths.

474; 6. ASHTON-UNDER-LYNE; *Dukinfield*.—Births 217; Deaths 150. Diarrhœa prevalent, and caused 27 deaths.

474; 8. ASHTON-UNDER-LYNE; *Mottram*.—Births 47; Deaths 24. The returns are below the average numbers, on account of so many families having removed from this district in consequence of the cotton panic. One village is quite deserted, owing to the long stoppage of the factory, where the owner employed upwards of thirteen hundred hands. In another place the factory and all the cottages have lately been bought by the Manchester corporation for the purpose of making another large reservoir.

475; 1. OLDHAM; *Oldham-below-Town*.—Births 397; Deaths 330. The deaths are 100 more than in the corresponding quarter of 1864. Diarrhœa and scarlatina still continue in this district, and they were fatal, the former in 45 cases, the latter in 76.

475; 3. OLDHAM; *Chadderton*.—Births 116; Deaths 79. The deaths are 27 above the average. The summer has been splendid, though the heat has been excessive. On Sunday (24th September) I observed that the atmosphere was full of midgets, so full that it might be compared to a snow storm. It was difficult to travel without getting them into the eyes and mouth. Apparently the high mortality must be referred to the remarkable character of the weather.

476; 4. ROCHDALE; *Castleton-within*.—Births 113; Deaths 130. The average of deaths for the September quarter is 71. Measles and diarrhœa have produced the increase.

477; 2. HASLINGDEN; *Rossendale*.—Births 87; Deaths 65. The births are below the average, owing to decrease of population, many cotton factories standing idle, and scores of houses being unoccupied in this district.

478; 2. BURNLEY; *Padiham*.—Births 79; Deaths 106. 47 deaths occurred from scarlatina; 2 from cholera.

480; 4. BLACKBURN; *Blackburn*.—Births 691; Deaths 404. The deaths are about 60 above the average of the four preceding September quarters. I have registered 13 from scarlatina, and 34 from diarrhœa.

481; 3. CHORLEY; *Rivington*.—Births 30; Deaths 25. The average number of deaths in the quarter ending 30th September for the last five years is 14. This quarter there are 13 fatal cases of scarlatina. A medical man has been engaged to visit every house in Adlington, but I have not as yet heard his report.

482; 2. PRESTON; *Preston*.—Births 795; Deaths 673. The deaths are 125 more than in the corresponding quarter of last year, and 155 more than the average for the last five corresponding quarters. The following diseases have been amongst the most fatal:—Diarrhœa 166 (including 9 from choleraic diarrhœa); phthisis 66, scarlatina 48, bronchitis 38, croup 14, small-pox 10, typhus 5, typhoid fever 7, diphtheria 4. 361 children died at and under 5 years of age. Small-pox has been prevalent in this sub-district. September 6th a man aged 29 years died after an illness of 36 hours of choleraic diarrhœa, after eating a quantity of mushrooms. A railway stoker, aged fifty years, died of cholera on the 28th August. There has been a gradual increase of mortality from diarrhœa in the September quarter, during the last four years, as will be seen from the following statements:—In 1862, 44; 1863, 71; 1864, 97; and in 1865, 166 deaths.

## IX. YORKSHIRE.

### 35. WEST RIDING.

497; 2. HUDDERSFIELD; *Meltham*.—Births 60; Deaths 36. The deaths are about 7 per cent. above the average. English cholera and diarrhœa have been very prevalent in this district during the last six or eight weeks, one death having been recorded from the former cause, and 8 from the latter. The victim of cholera was an old man of seventy-four years who was engaged in the action of the Shannon with the Chesapeake in Boston Bay under the command of Captain Broke.

498; 4. HALIFAX; *Halifax*.—Births 325; Deaths 304. The return shows an increase of 90 deaths. 24 were from diarrhœa, 15 from scarlatina; 8 from typhus; and 2 from English cholera. At the present time diarrhœa is on the decrease, and scarlatina on the increase.

499; 5. BRADFORD; *Bradford East*.—Births 343; Deaths 229. The deaths are 25 above the average. I have registered from diarrhœa 53 deaths; from fever 14; from scarlatina 9; from cholera 1.

499; 6. BRADFORD; *Bradford West*.—Births 230; Deaths 195. 40 deaths were from diarrhœa.

499; 8. BRADFORD; *Thornton*.—Births 123; Deaths 93. The number of deaths is considerably above the average, owing principally to the prevalence of diarrhœa and English cholera. The district is now in a healthy state.

499; 9. BRADFORD; *Wilsden*.—Births 55; Deaths 22. Deaths below the average. A case of cholera Asiatica was registered.

500d; 2. BRAMLEY; *Gildersome*.—Births 34; Deaths 42. The deaths are above the average, owing to the prevalence of scarlatina, which caused 16 deaths.

501; 1. LEEDS; *South East Leeds*.—Births 310; Deaths 265. The deaths exceed the average by 44. Diarrhœa has been prevalent and fatal amongst children. 79 deaths were from that disease.

508; 1. SHEFFIELD; *Sheffield West*.—Births 174; Deaths 136. Diarrhœa was fatal in 28 cases; entirely amongst young children.

508; 2. SHEFFIELD; *North Sheffield*.—Births 345; Deaths 345. There were 69 deaths from diarrhœa; 2 from cholera; 11 from scarlatina.

508; 3. SHEFFIELD; *South Sheffield*.—Births 191; Deaths 118. The deaths are in excess of the average, caused by the prevalence of infantile diarrhœa, to which the long continuance of extraordinary heat has in a great measure contributed. Of the 118 deaths, 21 are those of children under two years of age. Part of this excess may have arisen from the polluted and stagnant rivers Porter and Sheaf, which pass (where they are not obstructed by dams constructed to give motive power to manufactories) through the lower parts of this sub-district. The attention of the Local Board of Health has been drawn to the condition of those rivers, and measures will be adopted, I believe, to remedy the existing evil. A new line of railway, now in course of construction, will pass through the low parts of this sub-district, and will, by sweeping away a considerable portion of the rickety dwellings on Sheaf Island and Pond-street, tend to promote sanitary improvement.

508; 4. SHEFFIELD; *Sheffield Park*.—Births 208; Deaths 140.—46 deaths were from diarrhœa; 2 from English cholera. The deaths from diarrhœa amongst children are excessive even for this season of the year.

508; 5. SHEFFIELD; *Brightside*.—Births 461; Deaths 236. The births are 107, and the deaths 48, above the respective averages of five previous corresponding quarters. From the annexed table, it will be seen that the mortality among children has been very great, particularly from diarrhœa; but with that exception, disease of an epidemic character is comparatively slight in a population of 30,000 persons.

Births.			
Boys . . . . .	243	Marasmus . . . . .	12
Girls . . . . .	218	Pneumonia . . . . .	6

Whooping-cough . . . . .	1	ants who wrote	B. 278
Measles . . . . .	8	their Names . . . . .	D. 143

509; 2. ROTHERHAM; *Rotherham*.—Births 128; Deaths 143. There was much fever in Rotherham. The great increase of deaths requires notice. I registered 50 in July, 22 of which were from fever. The water supply is very inadequate.

509; 3. ROTHERHAM; *Kimberworth*.—Births 227; Deaths 180. I beg to call attention to the great increase of deaths in my district. There was much fever. There are great complaints of an insufficient supply of water.

511; 1. THORNE; *Epworth*.—Births 41; Deaths 22. In Epworth the street is in a very offensive state, all the filth running down for want of sewerage, and causing much sickness. There is much low

fever and dysentery; diarrhœa is very prevalent, and 2 severe cases of cholera have occurred.

### 36. EAST RIDING.

519; 6. SCULCOATES; *Drypool*.—Births 78; Deaths 85. The deaths are 46 above the average of the corresponding quarter in the last five years. 28 deaths are of young children from diarrhœa, which has been and still is very fatal. The population in my district is rapidly increasing; and I think some portion of the increase should be attributed to this cause.

519; 7. SCULCOATES; *East*.—Births 127; Deaths 91. Diarrhœa amongst children under two years of age fatal in 33 cases.

519; 8. SCULCOATES; *West*.—Births 166; Deaths 93. From diarrhœa 20 deaths.

520; 3. HULL; *Myton*.—Births 424; Deaths 347. The deaths are 61 above the average of four corresponding quarters. The increased mortality is owing to the prevalence of diarrhœa among children (77 out of the 78 fatal cases being those of children). The months of August and September were unusually hot. Diarrhœa caused 78 deaths; fever (typhus, typhoid, congestive, remittent, &c.) 31.

522; 5. SKIRLAUGH; *Brandesburton*.—Births 17; Deaths 9. Diarrhœa has been very prevalent in the district during the past quarter, especially amongst children. 2 or 3 cases of English cholera have also occurred.

### 37. NORTH RIDING.

525; 2. SCARBOROUGH; *Scarborough*.—Births 263; Deaths 161. The above return shows an increase of 67 births, and an increase of 44 deaths over the averages of four previous corresponding quarters. The mortality has been very great, particularly among young children, upwards of 70 having died under four years of age. The population of Scarborough is increasing rapidly, particularly amongst the labouring classes, which will in some measure account for the increase of births; and diarrhœa has been very fatal amongst children, arising probably from the excessively hot weather which has prevailed for a long time. Diarrhœa caused 27 deaths.

526; 1. MALTON; *Rillington*.—Births 38; Deaths 17. The deaths are about the average for the quarter. Diarrhœa and cholera have been very general. A fatal case, presenting all the features of Asiatic cholera, occurred to a person, who only survived 24 hours.

532; 3. GUISBROUGH; *Kirkcatham*.—Births 107; Deaths 85. The deaths are still above the average. This seems to arise from the extreme prevalence of diarrhœa, especially amongst young children, no less than 25 having died from this disease.

## X. NORTHERN COUNTIES.

### 38. DURHAM.

541a; 1. STOCKTON; *Yarm*.—Births 433; Deaths 259. The deaths are greatly above the average. Diarrhœa was very fatal in July and August. I re-

gistered from diarrhœa 49, typhoid fever 20, and English cholera 5 deaths.

545; 1. DURHAM; *Tanfield*.—Births 98; Deaths 46. The numbers in this return show both births and deaths to be on the increase, which may be wholly accounted for by the increase of population. Typhus has made its appearance, but has not as yet proved fatal in any case. The weather is exceedingly dry and mild for the season; the harvest has been well got in; trade is good, and wages remunerative, and altogether the country is in a very prosperous condition.

549; 1. SUNDERLAND; *North Bishopwearmouth*.—Births 260; Deaths 195. The deaths are 47 above the average of corresponding quarters in five previous years. 33 were from diarrhœa; 4 from small-pox. The weather in September was very hot. I registered 70 deaths in that month.

### 39. NORTHUMBERLAND.

552; 1. NEWCASTLE-UPON-TYNE; *Westgate*.—Births 495; Deaths 342. Diarrhœa has been particularly fatal during the quarter, especially among infants, as the following table will show:

Deaths from diarrhœa.				
	July.	August.	September.	Total.
Infants	31	20	14	65
Adults	3	3	7	13
	<u>34</u>	<u>23</u>	<u>21</u>	<u>78</u>

## XI. MONMOUTHSHIRE AND WALES.

### 42. MONMOUTHSHIRE.

580; 2. NEWPORT; *Newport*.—Births 243; Deaths 132. The mortality is not so great as in the three previous quarters, although small-pox still lingers in the town, and 14 deaths have occurred from that disease in the last three months. 3 cases returned as "cholera," "English cholera," and "choleraic diarrhœa" have been registered. The wife of an Irish labourer gave birth to three children, but they lived only three hours.

580; 3. NEWPORT; *St. Woollos*.—Births 85; Deaths 34. 10 deaths occurred from small-pox.

### 43. SOUTH WALES.

585a; 3. SWANSEA; *Swansea*.—Births 342; Deaths 239. The deaths for the quarter are still above the average. There were from measles 14; yellow fever 10; scarlatina 7; diarrhœa 10; small-pox 6; diphtheria 3; fever 4; typhus 2; gastric fever 1; scarlatina 1; croup 2. The weather appears to have affected the health of the town. 34 deaths have been registered in the past week.

600; 3. BRECKNOCK; *Brecknock*.—Births 67; Deaths 69. Scarlatina is still raging in my district; and I have registered 29 deaths from it in the quarter.

[The following Index furnishes a reference to the *Number* of each DISTRICT in the Tables of Marriages, Births, and Deaths contained in this Return. Any District in the Registrars' Notes may be found in the same manner. In forming the alphabetical arrangement, the principle adopted has been to place compound names in the order in which they are pronounced.]

LONDON :

Printed by GEORGE E. EYRE and WILLIAM SPOTTISWOODE,  
Printers to the Queen's most Excellent Majesty.

For Her Majesty's Stationery Office.

QUARTERLY RETURN  
OF  
THE MARRIAGES, BIRTHS, AND DEATHS  
REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF  
ENGLAND.

By Authority of the Registrar General.

PUBLISHED BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 68.] *Marriages, July, Aug., Sept., 1865.* [Price 4d.  
*Births and Deaths, Oct., Nov., Dec., 1865.*

General Register Office, Somerset House,  
31st January 1866.

The *Registers* of the UNITED KINGDOM show that 113,972 persons *married* in the quarter that ended in *September* last; that the *births* of 239,499 children, and the *deaths* of 159,524 persons of both sexes, were registered in the three months ending on *December* 31st. The recorded natural increase of population in 92 days was 79,975, or 869 daily. Exclusive of 8,101 foreigners, 36,256 emigrants sailed from these islands in the same period. So about 394 emigrants left daily; and allowing for defects in registration, which has only recently been established in Ireland, the increase at home has been about 520 daily.

The death-rate of the United Kingdom differs little from the average of England and Wales to be here discussed. The several facts concerning the other divisions of the Kingdom are fully set forth in the reports of the Registrar General of Scotland and the Registrar General of Ireland.

The estimated population in 1865 of England, Scotland, and Ireland is 29,772,294. The corrected death-rate of the quarter is 2.220 per cent.

TABLE I.—**Marriages, Births, and Deaths**, returned in the Years **1855-65** and in the Quarters of those Years in **England and Wales**.

YEARS -	1855	1856	1857	1858	1859	1860	1861	1862	1863	1864	1865
Marriages -	152,113	159,337	159,097	156,070	167,723	170,156	163,706	164,030	173,510	180,263	—

## ENGLAND.

This Return comprises the BIRTHS and DEATHS registered by 2200 Registrars in all the districts of England during the autumn quarter that ended on December 31st, 1865; and the MARRIAGES in 12,811 churches or chapels, about 5302 registered places of worship unconnected with the Established Church, and 641 Superintendent Registrars' offices, in the quarter that ended on September 30th, 1865.

A few fatal cases of epidemic cholera occurred during the quarter in the districts of Southampton and of Portsea Island on the southern coast of England; there was also a slight outbreak in Epping; but the number of deaths by cholera has been inconsiderable, and the epidemic has left no traces.

The mortality was above the average, but it was below that in the corresponding quarter of the previous year. The birth-rate was above the average.

The marriage returns are for the quarter ending in September 1865. The rate was much above the average. Weddings were more rife than they were in the previous summer, or in the summer of any year since registration began. This implies that the great body of the people were prosperous.

*Marriages.*

91,726 persons married in the quarter that ended on September 30th, 1865. The rate of marriage was 1·732, or 0·127 above the average.

The increase of marriages was general, but it was most striking in Yorkshire, where the woollen trade flourished in an extraordinary degree; Lancashire was also recovering from its depression. In London the marriages exceeded by nearly a thousand the marriages in the summer quarter of 1863.

*Births.*

179,020 births were registered in the last quarter of the year 1865. The birth-rate was 3·370, or ·073 above the average. The daily births were 1946, or 81 per hour. The number has varied little in the last three summers in any of the divisions.

*Increase of Population.*

As the births were 179,020, the deaths 121,304, the natural increase of population was 57,716 in 92 days, or upon an average 627 daily.

About 15,367 emigrants of English origin sailed in the 92 days from the ports of the United Kingdom at which there are emigration officers; 7,833 sailed to the United States, 823 to the American Colonies, 5,518 to Australia, and 1,193 to other places; on an average 167 English emigrants left the country daily.

Prices, Pauperism, and the Weather.

The price of wheat is rising. It was 38s. 5d. a quarter in the last three months of 1864, and 44s. 10d. a quarter in the last three months of 1865. The rise is nearly 17 per cent. on the low price of 1864. Beef by the carcase in London was on an average 5<sup>5</sup>/<sub>8</sub>d. per lb.; about <sup>1</sup>/<sub>8</sub>d. below the price of the corresponding season of 1864; and a halfpenny a pound dearer than it was in the autumn of 1863. The mean of the quoted prices of beef ranged from 4<sup>1</sup>/<sub>4</sub>d. to 7d. a pound; mutton from 5<sup>1</sup>/<sub>2</sub>d. to 8<sup>1</sup>/<sub>4</sub>d. in the last three months. The average price of mutton in the last three autumns was 6d., 6<sup>1</sup>/<sub>4</sub>d., and 6<sup>7</sup>/<sub>8</sub>d. a pound. The rise in the price of beef was 10 per cent., of mutton 15 per cent., in two years. This was partly the result of panic, and of interference with the supply of the markets, as the destruction of stock had not been considerable when the prices rose; and the rise itself was anticipated and augmented by the extra profits of the butchers.

The best potatoes at the waterside market, Southwark, sold at prices ranging from 60s. to 90s. a ton; from 3s. to 4s. 6d. the hundredweight. The prices are much lower than they were in the autumn of 1864.

On an average 129,036 paupers received complete relief in the workhouses; 725,259 paupers out of doors received relief sufficient to supply some of their wants, but not enough for subsistence. The numbers relieved in the workhouses

TABLE III.—The **Average Prices of Consols, of Wheat, of Meat, and of Potatoes**, also the **Average Number of Paupers relieved** on the *last day* of each Week, and the **Mean Temperature**, in each of the Nine Quarters ending December 31st, 1865.

\* Return with which the Registrar General has been favoured by the Emigration Commissioners: Of 44,357 emigrants the origin was undistinguished in 2,293 cases which have been distributed by calculation.

scarcely varied; the numbers out of doors fell from 804,941 to 771,879, and to 725,259 in the last three autumnal quarters.

The temperature of the quarter was 46° Fahrenheit, equal to 8° centigrade. The autumnal season was characterized by high temperature, storms, and a heavy rain-fall. The mean temperature of the air at Greenwich Observatory was 2·3° above the average of the season. The temperature of December there, was nearly as high as that of November; its mean temperature was 3·4° above the average of 94 Decembers. The rain-fall on 47 days was 9·2 inches at the Royal Observatory, or 2·1 inches above the average. The excess of rain fell in October, when the fall was 5·9 inches; in December the fall was only 0·9 inch, or full an inch below the average.

The rain-fall determines to some extent the water supply, and the excess in October made up the deficiency in the early part of the year. The rain-fall depends upon a great number of conditions, and consequently varies in every part of the country. Thus 20·2 inches of rain fell at Allenheads, 19·1 at Truro, and only 5·8 inches at Liverpool Observatory. The average rain-fall at Mr. Glaisher's 50 stations was 11·4 inches; which is equivalent to 1,151 tons of rain per acre, or to 42,961 million tons on the whole area of England and Wales. If the country ever suffers from the want of water, it is from defective storage or defective distribution. In the mountainous regions the annual rain-fall in some places has been found to amount to 190 inches: it would be a great advantage to get the water of the hills unpolluted for the supply of men and domestic animals in the plains.

Deaths; and the State of the Public Health.

The threats which were held over our heads of a new form of fever, the invasion of two points of the southern coast by epidemic cholera, which has ravaged the continent, and the prevalence of cattle plague all over England, led us to await the result of the returns with some anxiety.

It is gratifying under these circumstances to find that the mortality has been lower than it was in the autumn of 1864, and has been only ·104 above the autumnal average.

121,304 deaths were registered in the quarter, and the mortality was at the rate of 2·284 per cent. annually.

In the districts of the chief towns the mortality was at the rate of 2·564 per cent., or ·134 above the average.

The mortality in the country districts was, as usual, lower than the mortality in the town districts; it was at the rate of 1·927 per cent., and only ·042 above the average of those districts.

TABLE IV. — **Average Annual Rate of Mortality to 1000 of the Population in the 11 Divisions of England in the 10 Years 1851-60; in the Autumn Quarter of 1864; in the Year 1865, and in the Winter, Spring, Summer, and Autumn Quarters of 1865.**

DIVISIONS.	AVERAGE ANNUAL RATE of MORTALITY to 1000 LIVING in						
	10 Years 1851-60.	1864.	1865.				
		Autumn Quarter.	Year.	Winter Quarter.	Spring Quarter.	Summer Quarter.	Autumn Quarter.
I. LONDON - - -	23·63	26·12	24·40	28·46	23·16	21·91	21·05

XI. MONMOUTHSHIRE AND WALES - }	21·28	23·59	23·36	29·51	24·75	18·74	20·41

Thus the rate of mortality in the country districts was about 19, in the town districts nearly 26, and in the kingdom generally nearly 23 per 1000 living.

The mortality was lowest in the South-western Counties (19), highest in the North-western Counties (29); thus the annual rate was 10 per thousand higher in Lancashire and Cheshire round the Mersey than it was in the counties between the Bristol Channel and the channel which divides England from France.

It is gratifying to find that the mortality rate of London (24) is lower by 2 in 1000 than it was (26) in the autumn quarter of the previous year.

The mortality has been excessively high through the year in prosperous Yorkshire; it is still 2 above the county average (23), but it is somewhat lower than it was in the autumn of the previous year.

As a general rule the mortality has been higher than their average in the counties north of the Dee and of the Humber, and lower than the average in the counties of Wales and of the Midland and Southern region of England, around the basins of the Severn, Trent, and Thames.

The great towns of the United Kingdom may be arranged thus in the order of the autumnal mortality rate per 1000: Bristol 24, London 24, Dublin 26, Birmingham 26, Edinburgh 29, Hull 29, Leeds 33, Salford 34, Manchester 36, Glasgow 40, Liverpool 41. The mortality in 63 of the country districts was 18 during the same season.

It is sad to see this great sacrifice of human life in so many of our large towns, where the productive industry of the country is most active, and where the science of the country is applied to almost every purpose, except the maintenance of the hygienic conditions on which men can live in health.

It is satisfactory to observe at the same time traces of dawning light. London has undertaken great sewage works; Manchester is already supplied with abundance of water; and we may hope to see ere long a generous rivalry in our cities in the race of improvement. When pure water on the constant supply system is brought to every house, and the dirt in cesspools, which is the source of zymotic disease, is carried away to fructify the soil, the municipal authorities will have laid the solid foundations of the sanitary edifice. The inspection of articles of food by health officers, measures for the regulation of lodging-houses or of any of the houses in which fever is generated, and several other duties they may also undertake; but after all this is done, the crowning success must be achieved by the people themselves. Temperance, self-control, and skill in protecting themselves and their children from evil are every day called into requisition. The preservation of life depends upon careful attention to small things, and should be taught as a part of common education.

*Note.*—The three months January, February, March, contain 90, in leap year, 91 days; the three months April, May, June, 91 days; each of the last two quarters of the year, 92 days. For this inequality a correction has been made in the calculations, also for the difference between 365 and 365.25 days, and 366 and 365.25 days in leap year.

Mr. Leigh's able Sanitary Report on Manchester shows how much has been done, and how much remains to be done, in that city (see pp. 31, 32). It is to be regretted that Manchester has yet no health officer, but it is indebted to the Statistical and the Sanitary Societies for the publication of much valuable practical information.

TABLE VI.—Population; Births, Deaths; Mean Temperature and Rainfall in last Autumn Quarter, in Eleven Large Towns.

CITIES, &c.	ESTIMATED POPULATION in the Middle of the Year 1865.	BIRTHS in 13 Weeks ending 30th Dec. 1865.	DEATHS in 13 Weeks ending 30th Dec. 1865. #### ENGLAND in the Year 1865.

The births returned in the year amounted to 747,870, and the birth-rate was 3·563; it is the highest on record. The numbers will all be carefully revised at this Office, for publication in the Annual Report; but it is not likely that the birth-rate will be sensibly reduced by the operation.

491,360 deaths were registered in the year, and the death-rate was 2·341; that is 0·125 above the average of the ten years 1855-64. To 18 deaths in each of those years, out of the same number of people 19 died in the last year. The mortality was excessively high throughout the year in Yorkshire and Lancashire. In town and country the rate was much above the average in the winter quarter, near the average in spring, and slightly above the average in summer and autumn.

The excess of registered births over registered deaths was 256,510, or 1·222 per cent. on the population, which is the rate of recorded natural increase; of which the results are modified according as emigration sets in the strongest current inwards or outwards.

The marriage returns of the last quarter of the year are not yet in the Office, but the marriage rate of the year will, without doubt, be above the average.

This country was threatened not only by cholera but by yellow fever in the year. The *Hecla*, from Cuba, laden with copper ore, entered Swansea Harbour, lying between a low inhabited island and the town, at 9 A.M. on 9th September, and landed James Saunders, sick; he died in the course of the day. On the 23d of September the Registrar of Swansea received the certificate of the death of John Jesse by yellow fever, and this certificate was sent by the Registrar-General to the Council Office, who immediately, through Dr. Buchanan, instituted a searching inquiry into the subject, of which the importance was evident. *Twenty-nine* persons who had been in or near the *Hecla* were attacked by the fever, and thirteen persons died of it in Swansea, one in the *Eleanor* sloop, and one in Llanelly. The disease did not spread by contagion, but it was apparently induced by the diffusion of the fever miasm among the people. Judicious measures were taken for removing the *Hecla* from the harbour, and for purifying her foul interior. The last death by yellow fever occurred on 8th October.

In this case, as well as in the invasion of Southampton by cholera, the importance of attention to the hygienic condition both of our merchant vessels and our seaports is clearly seen; for a foul ship instead of merchandise carries from land to land the seeds of depopulating diseases, and a foul seaport supplies the soil in which they rankly germinate.

MARRIAGES Registered in the Quarters ending 30th September 1863—1865 ; BIRTHS and DEATHS Registered in the Quarters ending 31st December 1863—1865 ; in the DIVISIONS, REGISTRATION COUNTIES, and DISTRICTS of ENGLAND.

\* The Registration Counties consist of groups of entire Registration Districts ; which Districts are, in general, identical with the Poor Law Unions. As the principle adopted has been to place a District or Union which extends into more than one County with the County in which either the principal town or the greater part of the population is located, the limits of the Registration Counties differ more or less from the boundaries of the counties proper.

MARRIAGES Registered in the Quarters ending 30th September 1863 — 1865 ; BIRTHS and DEATHS Registered in the Quarters ending 31st December 1863 — 1865 ; in the DIVISIONS, REGISTRATION COUNTIES, and DISTRICTS of ENGLAND—continued.

\* The union of Pontypridd, consisting of parishes taken from the districts of Cardiff (581a) and Merthyr Tydfil (582), was formed on 18th July 1863.

† The number of districts is increased to 641 by the formation of the following 18 new districts: Mile End Old Town (24b), Dulverton (313b), Whitechurch, Salop (363b), Birkenhead (460b), Great Ouseburn (492a), Wetherby (492c), Kirkdeighton (492d), Wharfedale (493b), Kirkstall (500a), Holbeck (500c), Bramley (500d), Hemsworth (504b), Castleford (504c), Bramham (514b), Hartlepool (541b), Bedwelty (578b), Pontypridd (581b), and Gower (585b).

*Remarks on the Weather, during the Quarter ending 31st of December 1865. By JAMES GLAISHER, Esq., F.R.S., &c., Secretary of the British Meteorological Society.*

The remarkable fine and dry weather which had prevailed in September continued during the first week in October; the barometer reading during this time was about 30 in.; at the beginning of the second week there were indications of a change, the temperature fell, and the barometer-reading decreased on the 12th day to nearly 29 in., then increased rapidly to 29.9 in. by the 15th, and decreased to below 29 in. by the 18th day; from this time rain fell very heavily, and heavy gales of wind were experienced; the weather continued stormy to the end of the month, rain falling in abundance. At the beginning of November there were frequent gales, and much stormy weather; at about the 10th day the weather assumed the aspect of a more settled character, the barometer reading ascended above the average, and was nearly 30.4 in. on the 12th; from the 17th to the 22d the barometer reading decreased very rapidly, and was 28.8 in. on the latter mentioned day, this was accompanied by a fearful gale, acting with ruinous effects on both land and sea. The reading of the barometer was very unsettled during the remainder of the month. The month of December opened with light S.E. winds, the air was mild and warm. The barometer reading increased by the 11th day to 30.8 in. About the middle of the month trees budded and daises were in blossom. Towards the end of the month the barometer decreased quickly till it was 29.0 in. by the 29th. Frequent and violent gales occurred, causing many shipwrecks. The force of the wind on the last day reached 24 lbs. on the square foot, both at Greenwich and at Liverpool. The temperature during the whole quarter, with the exception of a few days about the middle of October, the beginning of November, and the middle of December, was in excess of the average, to the daily amount of  $1\frac{3}{4}^{\circ}$ .

The mean temperature of October was  $50^{\circ}.9$ , being  $0^{\circ}.4$  above the average of the preceding 24 years, and of the same value as last year.

The mean temperature of November was  $44^{\circ}.8$ , being  $0^{\circ}.8$  above the average of the preceding 24 years, and  $2^{\circ}.8$  above that of 1864.

The mean temperature of December was  $42^{\circ}.4$ , being  $2^{\circ}.1$  above the average of the preceding 24 years, and  $3^{\circ}.9$  higher than in 1864.

The temperature of the air decreased from September to October by  $7^{\circ}$  or  $8^{\circ}$  at Guernsey and Devonshire, but by  $10^{\circ}$  to  $13^{\circ}$  at all other parts of the country. November was colder than October by  $6^{\circ}$  or  $7^{\circ}$ , and the decrease from November to December was from  $1^{\circ}$  to  $2^{\circ}$  only; in some northern places December was even warmer than November.

The mean high day temperatures in the months of October, November, and December were  $60^{\circ}$ ,  $50^{\circ}.8$ , and  $46^{\circ}.7$ , being  $1^{\circ}.3$ ,  $1^{\circ}.7$ , and  $1^{\circ}.5$  above their respective averages.

The mean low night temperatures were  $43^{\circ}.7$ ,  $38^{\circ}.7$ , and  $38^{\circ}.1$  respectively in these three months.

The fall of rain in October was 5.9 in., and in the quarter  $9\frac{1}{4}$  in. The fall for the whole year was 29 in., being about  $3\frac{1}{2}$  in. in excess of the average.

The mean temperature of the air at Greenwich in the three months ending November, constituting the three autumn months, was  $53^{\circ}.2$ , being  $3^{\circ}.3$  above the average of the preceding 94 years.

NOTE.—In reading this table it will be borne in mind that the sign (-) minus signifies below the average, and that the sign (+) plus signifies above the average.

Thunder storms occurred or thunder was heard and lightning was seen on October 8th at Osborne, Brighton, and Marlborough; on the 10th at Wilton; on the 11th at Hawarden; on the 17th at Abington and Grantham; on the 24th at Helston and Stonyhurst; on the 25th at Truro and Clifton; on the 26th at Helston and Osborne; on the 27th at Eccles; on the 29th at Truro, Clifton and Allenheads; and on the 30th at Brighton. On 21st November at Guernsey, and on the 24th at Truro. On 19th December at Stonyhurst; and on the 31st at Guernsey.

*Thunder was heard but lightning was not seen* on 8th October at Guernsey and Battersea ; on the 9th at Guernsey ; on the 11th at Wisbeach ; on the 17th at Wisbeach and Belvoir ; on the 27th at Helston, Clifton, and Stonyhurst ; and on the 30th at Oxford and Lampeter. On 22d November at Lampeter ; on the 25th at Guernsey and Lampeter ; on the 26th at Holkham ; and on the 31st at Guernsey.

*Lightning was seen but thunder was not heard* on 7th October at Helston ; on the 8th at Guernsey, Truro, Wilton, Aldershot, Great Berkhamstead, Royston, Abington, and Belvoir ; on the 9th at Wisbeach ; on the 10th at Brighton ; on the 11th at Truro, Osborne, Brighton, Wilton, Marlborough, Streatley, Oxford, and Llandudno ; on the 14th at Diss ; on the 15th at Clifton ; on the 20th at Penketh ; on the 22d at Halifax ; on the 25th at Truro ; on the 26th at Brighton, Battersea, Streatley, Kingsley, and Stonyhurst ; on the 27th at Brighton, Aldershot, Abington, and Diss ; on the 28th at Truro ; on the 29th at Aldershot, Marlborough, Liverpool, Castleton, Stonyhurst, Cockermouth, Silloth, and Carlisle. On 4th and 5th November at Guernsey ; on the 19th at Culloden ; on the 21st at Guernsey, Brighton and Clifton ; on the 22d at Brighton, Clifton, Banbury, Abington, Llandudno, Kingsley, and Castleton ; on the 24th at Aldershot and Carlisle ; on the 25th at Truro ; and on the 26th at Guernsey and Brighton. On 1st December at Guernsey, and on the 16th at Marlborough.

*Solar halos were seen* on 7th October at Penketh ; on the 29th at Clifton and Hawarden ; on the 16th at Brighton and Grantham ; on the 19th and 20th at Stonyhurst ; on the 22d at Hawarden and Penketh ; and on the 28th at Clifton. On 2d November at North Shields ; on the 3d at Clifton and Hawarden ; on the 7th at Penketh ; on the 13th at Clifton ; on the 18th at Oxford, Hawarden and Penketh ; on the 20th, 21st, and 23d at Oxford ; and on the 27th at Oxford, Penketh and Culloden. On 2d December at Royston, and on the 5th at Wisbeach and Grantham.

*Lunar halos were seen* on 2d October at Wilton ; on the 7th at Penketh ; on the 28th at Aldershot, Clifton, Oxford, Great Berkhamstead, Kingsley, Penketh, and Bywell ; and on the 31st at Liverpool. On 1st and 2d November at Halifax ; on the 3d at Great Berkhamstead ; on the 4th at Galway ; on the 6th at North Shields ; on the 16th at Great Berkhamstead ; on the 17th and 23d at Truro ; on the 26th at Galway ; on the 27th at Clifton, Oxford, Royston, Abington, Wisbeach, and North Shields ; and on the 30th at Truro. On 1st December at North Shields ; on the 2d at Marlborough and Abington ; on the 3d at Wilton, Clifton, Oxford, Grantham, and Kingsley ; on the 15th at North Shields ; on the 25th at Oxford and Grantham ; on the 26th at Aldershot, Oxford, Wisbeach and Grantham ; on the 27th at Cardington ; on the 28th at Oxford, Cardington, Wisbeach, Grantham, Kingsley, and North Shields ; on the 30th at Clifton, Oxford, Royston, Abington, Grantham, and North Shields ; and on the 31st at Oxford.

*Auroræ were seen* on 6th October at Cockermouth ; on the 7th at Penketh ; on the 18th at Llandudno ; on the 19th at Wilton, Marlborough, Clifton, Streatley, Oxford, Wisbeach, Belvoir, Grantham, Hawarden, Kingsley, Penketh, Cockermouth, Silloth, Carlisle, Bywell, and North Shields. On 8th November at Silloth and Culloden ; on the 9th at Silloth ; on the 11th and 15th at Culloden ; on the 22d at Oxford ; and on the 27th at Great Berkhamstead. On 13th December at North Shields.

*Snow fell* on October 19th, 26th, and 27th at Allenheads ; and on the 29th at Allenheads and Bywell. On 25th November at Llandudno ; and on the 26th at Allenheads. On 2d December at Cockermouth ; on the 3d at Cockermouth and Allenheads ; on the 15th at Royston and Wisbeach ; on the 29th at Allenheads ; on the 30th at Marlborough, Penketh, Eccles, Allenheads, Bywell, North Shields, and Miltown, Banbridge, Ireland.

*Hail fell* on October 17th, 18th, 19th, 20th, 26th, 27th, 29th, 30th, and 31st. On November 8th, 21st, 22d, 26th, 27th, and 29th. On December 1st, 2d, 3d, 29th, 30th, and 31st.

*Fog was prevalent* on 74 days during the quarter ; viz., 26 in October, 22 in November, and 25 in December.

At *Guernsey* the mean temperatures of the air in October and November were  $2^{\circ} \cdot 2$  and  $1^{\circ} \cdot 2$  above their respective averages ; the fall of rain was also above the average in these two months, being 4.0 inches in the former and 2.3 inches in the latter, that of October being the heaviest fall in any month for the last 22 years. The number of rainy days in November was slightly above the average, and in December very much below. The first week in October was remarkably fine ; the rest of the month was squally, with boisterous baffling winds. November was stormy, the wind frequently and extensively retrograde. In December the range of the barometer was excessive, with an unusual prevalence of S.E. winds.

At *Great Berkhamstead* the first week of October was fine and warm, afterwards the weather was wet and windy ; more rain was collected than in any month since November 1852. November was fine for the season, till the 14th, afterwards rain fell almost every day ; there were stormy gales of wind from the 22d to the 26th. December was overcast and gloomy on most days ; a large amount of rain fell from the 28th to the 31st, chiefly in the night hours, with high wind.

At *Wisbeach* the weather from the 22d to the 23d of November was stormy ; the maximum pressure on the 22d was 25 lbs. ; on the 24th, 15 lbs. ; and on the night of the 25th, 12 lbs.

At *Streatley* a very remarkable thing in December was the intense gloom caused by the thick coating of clouds, so thick that several days passed without the slightest indication of sun heat on the thermometer with black bulb in vacuo.

At *Stonhyhurst* there was a gale on the 25th of November, the barometer falling from 28.870 in. at 9 A.M. to 28.295 in. at 9 P.M. The mean reading of the barometer in December was the highest recorded for that month during the last 18 years, excepting the year 1857. The maximum has been exceeded only in the year 1850, and was the highest reading of the barometer registered in any month since November 1857.

At *Cockermouth*, from the 20th to the 28th of November, the barometric reading was very low and unsteady ; there being four distinct oscillations during that period. Rain fell on only four days during the first half of the month, but there was more or less rain every day from the 16th to 26th inclusive, with boisterous winds. The reading of the barometer at 10 A.M. on 11th December was

30·766 in., the highest reading recorded here during the past four years. The temperature of December was 1° 7' above that of November.

At *Culloden* the unusually dry and hot weather experienced in September continued to prevail till the 9th of October, after which day the temperature declined considerably, and the weather became broken and rainy. Snow fell on Ben Wyvis, Ross-shire (elevation 3422 feet), and other northern mountains on the night of the 18th. November continued generally mild throughout, with a dry atmosphere for the season, only 1·98 in. having fallen; there were slight frosts occasionally during the month, but the temperature was not lower than 22°, and that on the grass. A small covering of snow lay on the ground on the night of the 26th, but it melted away early on the 29th before a fresh breeze from the S.W.

At *Belvoir*, wheat sowing was interrupted by wet weather, and but little ground could be sown in October, which may be recorded as a most unusual and unfortunate circumstance; the heavy rains benefited the turnip crops, which had suffered from mildew and fly, renewed growths took place, and an evident improvement was visible in both sweedes and white turnips by the end of the month. Mangold wurzel was secured and housed, and the crop was sound, good, and abundant. Potatoes were seriously affected with disease, and fully half the crop was lost. Carrots proved a great crop. Serious losses have occurred amongst lambs, from inflammation, and in some instances from worms in the throat; old sheep are healthy; beasts have escaped disease and are doing well; crops of apples not abundant. Spanish chesnuts ripened well, and were abundant. In November, operations were impeded by the heavy state of the land. Stock healthy. Root crops tolerably abundant. Potatoes cheap. The weather in December was favourable for agricultural operations, arrears of wheat sowing were made up. Root crops were in good condition, and sufficiently abundant. Sheep healthy and thriving. Beasts, with the exception of one yard, healthy. The beasts in an isolated farm, that stood near Eaton, 3 miles from Belvoir, were attacked early in December with Rinderpest; Arsenicum, 3 dilution, had been given previously; two neighbouring Inspectors were called in, Messrs. Talbot and Goodall, and 13 beasts out of 20 attacked were saved, and are now doing well; great attention was paid to these beasts in the application of stimulants, and in the employment of coverings; the tolerably healthy are elevated perhaps 450 feet above the sea level.

The observer at *Culloden* says, the rains which fell from 13th October to the end of the month had a most beneficial effect on the turnip crop; mildew, which had previously been prevalent to a great extent, quite disappeared, the roots made considerable progress, increased in size, and put forth fresh leaves. The potato crop was lifted in very good condition; it is a fair average one, and without any appearance of disease. "Rinderpest" has fortunately not as yet broken out in any north country stock, but the fear created by its continued ravages elsewhere has made markets merely nominal, and it is a difficult matter to sell unknown stock. Owing to the absence of severe frost and high winds, all the trees retained their leaves for a longer period, during the autumn of the present year, than is usually the case. The nuts on many of the Spanish chesnuts are well filled, particularly so on trees freely exposed to the sun. The land in November was, as might be expected, in fine working order, and in almost all cases tillage is well advanced. The young wheats are showing well above ground, and where early planted are fresh and green, and otherwise promising. From the want of straw this season, rather over an average extent of land has in several instances been put under wheat. The weather being so dry has been most favourable for the lifting of turnips, and much has been done in this way. Pastures have lost little of their freshness, and sheep have, as yet, not much need for extra feeding.

*The lime was divested of leaves* on 28th October at Marlborough; on 2d November at Guernsey; on the 7th at Great Berkhamstead and Penketh; and on the 9th at Brighton.

*The horse chesnut was divested of leaves* on 25th October at Penketh; on 2d November at Marlborough; on the 5th at Guernsey; on the 9th at Helston; on the 12th at Brighton; and on the 18th at Great Berkhamstead.

*The field elm was divested of leaves* on 31st October at Penketh; on 19th November at Oxford; on the 20th at Guernsey; and on the 22d at Great Berkhamstead.

*The sycamore was divested of leaves* on 31st October at Penketh; on 4th November at Helston; on the 5th at Guernsey; on the 7th at Great Berkhamstead; and on the 17th at Brighton.

*The common poplar was divested of leaves* on 31st October at Penketh; on the 13th at Helston; on the 14th at Great Berkhamstead; and on the 15th at Brighton and Oxford.

*The oak was divested of leaves* on 15th November at Guernsey; on the 20th at Culloden; on the 22d at Great Berkhamstead; and on the 24th at Penketh.

*The hawthorn was divested of leaves* on 12th November at Helston; and on the 22d at Penketh.

*The beech was divested of leaves* on 12th November at Culloden; and on the 21st at Penketh.

*The ash was divested of leaves* on 8th November at Culloden; and on the 15th at Penketh.

*The laburnum* on 4th October at Llandudno.

*The hazel* on 12th November at Helston.

*And the walnut* on 13th November at Brighton.

*Leaf buds appeared on the lime and horse chesnut* on 20th October at Oxford.

*The apple tree was in blossom* at Llandudno on 12th October.

*Strawberries were ripe* on 10th October at Llandudno; and on the 14th at Marlborough.

*Raspberries were ripe* on 28th October at Marlborough.

*Swallows departed* on 5th October from Hawarden; on the 6th from Helston; and on the 16th from Abington and York. They were seen on 2d December at Sidmouth in Devonshire.

*Fieldfares arrived* on 13th October at Abington; and on the 16th at Streatley.

*Woodcocks arrived* on 2d October at Helston.

*Redwings arrived* on 7th October at Abington.

At *Cockermouth* very little ozone was registered during October, none between the 16th September and 8th October. This is principally owing to the stillness of the air and prevalence of easterly winds.

The Observations have been reduced to Mean values by Glaisher's Barometrical and Diurnal Range Tables, and the Hygrometrical results have been deduced from his second edition of Hygrometrical Tables.

The return for Kingsley Parsonage for October is too incomplete for publication.  
The returns from Holkham, Castleton Moor, and Culloden, for December, were received too late for the publication of the quarterly results.

*Second Rain-gauges are placed*—At Aldershot at the height of 25 feet above the ground, the amount collected was 8.8 inches; at Clifton, 50 feet, 10.2 inches; at Guildhall, 77 feet, 8.2 inches; at Oxford, 24 feet, 8.4 inches; at Cardington, 36 feet, 7.1 inches; at Wisbeach, 8 feet, 8.2 inches; at Kingsley, 13 feet, 5.4 inches; at Halifax, 30 feet, 9.5 inches; at Cockermouth, 6½ feet, 11.7 inches; at Allenheads, 6½ feet, 23.7 inches; at Miltown, Banbridge, 40 feet, 10.6 inches; and at the Baun Reservoir at 440 feet above the level of the sea, 28.1 inches.

ERRATA.—In the Quarterly Table for the three months ending March 1864. Mean of all lowest temperatures at Bournemouth, for 44°·3 read 34°·3.  
June 1864. Weight of cubic feet of air at Miltown, Banbridge, for 549 grs. read 539 grs.  
September 1864. Mean of all highest temperatures at Aldershot, for 78°·4 read 71°·4.  
September 1864. Temperature of dew-point at Manchester, for 39°·5 read 49°·5.

NAMES OF STATIONS.	Mean Pressure of dry Air reduced to the level of the Sea.	Highest Reading of the Thermometer.	Lowest Reading of the Thermometer.	Range of Temperature in the Quarter.	Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation.	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Reading of Maximum in Rays of Sun.	Mean Reading of Minimum on Grass.	Mean Estimated Strength.	WIND.				Mean Amount of Ozone.	Mean Amount of Cloud.	RAIN.			
																			Relative Proportion of						Number of Days on which it fell.	Amount collected.

## REGISTRARS' NOTES.

*In compliance with the following instruction, remarks have in many instances been appended by the Registrars to their Returns; from which the following Notes have been selected. The Registrars alone must be considered responsible for the opinions which they express.*

### INSTRUCTION TO REGISTRARS:—

“If the Deaths registered during the quarter have been above or below the average, state whether, in your opinion, the fact is wholly or partially accounted for by sanitary arrangements, by increase or decrease of population, the weather, Small-pox, Measles, Scarlatina, Whooping-cough, Fever (including typhus, typhoid, relapsing, infantile fever), Cholera, Diarrhœa (including bowel complaint), Dysentery, Bronchitis, or other disease. Also with regard to increase or decrease of Births, you may mention any circumstance to which it may be attributed. By ‘Average’ must be understood *not* the average of numbers in other quarters of the year, but the average of *corresponding* quarters in four or five previous years.”

The figures prefixed refer to the numbers of the District and Sub-District. The name of the District is in SMALL CAPITALS, that of the Sub-district in *italics*.

## II. SOUTH-EASTERN COUNTIES.

### 1. SURREY (*extra-metropolitan*).

46; 1. CROYDON; *Croydon*.—Births 456; Deaths 303. The health of this district has been in a bad state during the past quarter. 50 deaths were from fever, principally typhoid.

### 2. KENT (*extra-metropolitan*).

58; 4. MAIDSTONE; *West*.—Births 81; Deaths 93. The deaths are 21 above the average. There have been 14 deaths from small-pox.

58; 5. MAIDSTONE; *East*.—Births 105; Deaths 72. The deaths are slightly above the average. Small-pox has been very prevalent, and was fatal in 5 cases.

67; 2. FAVERSHAM; *Faversham*.—Births 100; Deaths 58. Small-pox has been very prevalent; and I have registered 5 deaths in the quarter from that disease.

### 3. SUSSEX.

85; 2. BRIGHTON; *St. Peter*.—Births 425; Deaths 308. I have registered 19 deaths from diarrhœa, 32 from fever, and 13 from small-pox in the quarter. 23 deaths occurred in the Sussex County hospital, and 45 in the workhouse.

86; 1. STEYNING; *Shoreham*.—Births 163; Deaths 106. Deaths rather more than the average. Typhus prevailed in Portslade parish, and 7 cases were fatal. That parish is now more healthy.

92; 3. CHICHESTER; *South Bersted*.—Births 21; Deaths 8. The mortality is singularly low. In the September quarter the deaths were only 10; and last quarter not quite so many. The average age of the 8 persons now registered is 52 years. I think this is worthy of record, as our population, including visitors, is quite equal to 4,000.

### 4. HAMPSHIRE.

96; 1. PORTSEA ISLAND; *Kingston*.—Births 271; Deaths 169. The deaths show an increase of 28 on those of the corresponding quarter of last year, chiefly owing to diarrhœa, which was very prevalent in the months of October and November. Cholera also manifested itself in the Workhouse during these months. 9 certified cases (one “Asiatic”) were registered.

105; 1. SOUTHAMPTON; *Southampton*.—Births 350; Deaths 337. The deaths are 113 above the average of corresponding quarters in the previous 5 years. 69 deaths have been registered as resulting from scarlatina.

106; 3. SOUTH STONEHAM; *Millbrook*.—Births 96; Deaths 84. There were 6 deaths in Freemantle from “Asiatic cholera;” also 6 from diarrhœa in Freemantle, and one in Shirley. 12 deaths occurred in the latter place from scarlatina. Medical men in this district attribute the epidemic to the unhealthy state of the atmosphere, rather than to local causes; but the drinking water is bad on account of imperfect drainage. Sanitary measures are now being attended to, which in future will probably prevent filtration from sewers into the wells.

### 5. BERKSHIRE.

129; 1. COOKHAM; *Bray*.—Births 65; Deaths 51. Of the 51 deaths, 11 were those of women in child-bearing.

131; 2. WINDSOR; *Windsor*.—Births 124; Deaths 80. Small-pox has been and is prevalent in some localities in this sub-district. 5 deaths occurred from it in the quarter.

## III. SOUTH MIDLAND COUNTIES.

### 7. HERTFORDSHIRE.

139; 3. BISHOP STORTFORD; *Bishop Stortford*.—Births 69; Deaths 42. Typhoid fever has been rather prevalent, and 8 cases of it proved fatal.

139; 4. BISHOP STORTFORD; *Braughing*.—Births 10; Deaths 20. The mortality is high. 5 deaths were from typhoid fever in Braughing.

147; 2. BERKHAMSTED; *Tring*.—Births 58; Deaths 45. Typhoid fever has been very prevalent at the West End of Tring. Although it has not proved fatal in many cases, in some houses 3 or 4 persons have been ill. There are no sewers at the West End, where there are upwards of 1,000 inhabitants; and the dunghills and dead-wells drain into the wells, and corrupt the water.

### 8. BUCKINGHAMSHIRE.

148; 2. AMERSHAM; *Chesham*.—Births 68; Deaths 18. The rate of mortality in this district was never

lower since the Registration Act has been in operation. The only quarter in which the deaths have been so few was that ending 30th September 1843, when 18 were registered. The health of the district is good.

150; 4. WYCOMBE; *Wendover*.—Births 24; Deaths 26. Typhus prevails in Great Kimble to a considerable extent.

#### 10. NORTHAMPTONSHIRE.

174; 3. OUNDLE; *Fotheringhay*.—Births 46; Deaths 18. My district is now remarkably healthy. Out of a population of 6,000 and upwards, only 18 deaths occurred; and in the September quarter only 20. Work is very plentiful; every able bodied farm labourer earning good wages; viz., from 11s. to 14s. per week by the day, and more if engaged by the piece.

#### 11. HUNTINGDONSHIRE.

177; 2. ST. IVES; *Somersham*.—Births 22; Deaths 21. Meat is so dear that scores of families in the labouring class are not able to procure it. They live on bread, tea, potatoes, and onions. Wages 9s. and 10s. per week. District healthy.

#### 13. CAMBRIDGESHIRE.

187; 4. CAMBRIDGE; *St. Giles*.—Births 28; Deaths 31. Measles has been epidemic during the latter part of the quarter, and has raised the mortality above the average.

### IV. EASTERN COUNTIES.

#### 14. ESSEX.

200; 1. CHELMSFORD; *Ingatestone*.—Births 53; Deaths 28. Cases of typhus have occurred at the Ingatestone station and its neighbourhood, some of them of a severe kind. The station-master has died of the fever. Trucks carrying London manure are frequently unloaded at the station, giving much annoyance, and being the subject of complaint.

202; 1. MALDON; *Southminster*.—Births 30; Deaths 25. One death occurred this quarter from variola. We have had small-pox in this district since July last, and nothing has been done to purify the drains and cesspools in any parish. Unless something can be done I anticipate a severe outbreak of it in the spring and summer.

202; 2. MALDON; *Bradwell*.—Births 26; Deaths 18. The number of deaths during the past year has been far above the average, in consequence of a low type of fever having prevailed in Tillingham, which has, in my opinion, been caused by the very defective state of the drainage, in some cases rendering the cottages almost uninhabitable.

209; 3. DUNMOW; *Hatfield*.—Births 25; Deaths 21. Two deaths occurred from typhoid fever in a house where 11 persons slept in one room; other members of the family are ill at the present time.

210; 3. SAFFRON WALDEN; *Radwinter*.—Births 38; Deaths 19. Typhoid fever has been very prevalent during the quarter at the Sampfords, although hitherto only one death has taken place. There are more than 20 cases at the present time. The spread of the disease is no doubt aided by bad sanitary condition.

### V. SOUTH-WESTERN COUNTIES.

#### 17. WILTSHIRE.

267; 1. MERE; *Mere*.—Births 49; Deaths 45. The deaths in the quarter have been above the average. This is wholly accounted for by an increase of fever, which has been very prevalent in this district, especially in the parish of Mere, where the drainage is defective, water impure, and many of the cottages of the poor overcrowded. Deaths from typhoid fever 12.

#### 18. DORSETSHIRE.

278; 2. BRIDPORT; *Bridport*.—Births 68; Deaths 71. The deaths have been above the average, as 20 have been registered from scarlatina, and a few from measles and whooping-cough. Scarlatina has been most prevalent in the overcrowded parts of the town.

#### 19. DEVONSHIRE.

279; 4. AXMINSTER; *Colyton*.—Births 39; Deaths 33. Two deaths in Seaton occurred from diphtheria in the previous quarter, and 4 have been registered last quarter from the same cause, within 300 yards of each other. All the cases were directly traceable to defective drainage, there being no case of illness of the kind except in the same street where all the deaths occurred. This has been represented to the Board of Guardians, but no steps have been taken to improve the drainage. A death from cholera in a child four years old, with very marked symptoms, and illness of only 14 hours, was registered the second week in October. Opposite the house where the death occurred a watercloset drain had the previous day burst on the surface, the stench from which was intolerable.

281; 5. ST. THOMAS; *Topsham*.—Births 36; Deaths 30. The number of deaths is above the average, which is 20. Measles has been very prevalent in Topsham, and has proved fatal in 10 cases.

#### 20. CORNWALL.

310; 4. REDRUTH; *Camborne*.—Births 112; Deaths 83. The deaths are about the average of the quarter; 8 were registered from typhus, which is still prevalent in the district.

#### 21. SOMERSETSHIRE.

321; 2. FROME; *Frome*.—Births 87; Deaths 71. Scarlatina still lingers in the sub-district, and there were 17 deaths from this disease.

### VI. WEST MIDLAND COUNTIES.

#### 23. HEREFORDSHIRE.

351; 1. LEOMINSTER; *Leominster*.—Births 43; Deaths 54. The excess of deaths has been caused by the prevalence of typhus and low fever.

#### 24. SHROPSHIRE.

355; 1. CLEOBURY MORTIMER; *Cleobury Mortimer*.—Births 35; Deaths 45. The deaths have exceeded the average; the mortality having been great amongst aged people. 9 deaths from measles have been registered.

366; 2. NEWPORT; *Gnosall*.—Births 29; Deaths 21. The deaths are rather above the average, owing to typhus and gastric fever having been prevalent in Adbaston and High Offley parishes.

## 25. STAFFORDSHIRE.

370; 3. WOLSTANTON; *Burslem*.—Births 260; Deaths 150. Small-pox has been prevalent; 9 deaths occurred from this disease, 2 of which cases were after vaccination. 5 of the "not vaccinated" cases occurred in one family. The father was summoned, and fined 20s., with costs, for neglect of the requirements of the Act.

371; 5. STOKE-UPON-TRENT; *Longton*.—Births 215; Deaths 248. The large number of deaths in the past quarter is owing, in a great measure, to an epidemic of scarlatina, which has been in Longton for many weeks, and was fatal in 88 cases.

373; 3. CHEADLE; *Dilhorne*.—Births 44; Deaths 32. 9 deaths occurred from scarlatina, 6 from diarrhoea.

376; 2. TAMWORTH; *Fazeley*.—Births 76; Deaths 52. 15 deaths were from typhus and typhoid fever.

379; 7. WOLVERHAMPTON; *Bilston*.—Births 300; Deaths 155. 28 deaths were from scarlatina.

## 26. WORCESTERSHIRE.

383; 2. STOURBRIDGE; *Stourbridge*.—Births 230; Deaths 105. Scarlatina has been and still continues very prevalent. 17 deaths have been registered during the quarter from that cause.

## VII. NORTH MIDLAND COUNTIES.

## 28. LEICESTERSHIRE.

415; 1. LOUGHBOROUGH; *Loughborough*.—Births 140; Deaths 129. The deaths are above the average of the last five years, which, as I have been informed, may be attributed principally to the prevalence of fever of an endemic character.

416; 1. BARROW-ON-SOAR; *Barrow-on-Soar*.—Births 41; Deaths 27. Typhoid, relapsing, and typhus fever have been prevalent in Barrow in this quarter, and are still prevailing. The disease commenced first in an ill-drained locality, and extended to other places equally defective, where the dwellings were confined and overcrowded. Sileby has also been attacked, but with less force than Barrow.

417; 1. LEICESTER; *East Leicester*.—Births 458; Deaths 351. 55 deaths occurred from measles, 23 from diarrhoea, and 11 from fever.

417; 2. LEICESTER; *West Leicester*.—Births 280; Deaths 216. Measles was fatal in 27 cases.

## 30. LINCOLNSHIRE.

424; 2. HOLBEACH; *Long Sutton*.—Births 69; Deaths 43. The district has lately been very unhealthy. There were 7 deaths from diphtheria in the quarter.

427; 3. GRANTHAM; *Grantham*.—Births 153; Deaths 164. Typhoid fever was fatal in 24 cases, measles in 19, whooping cough in 15.

432; 1. CAISTOR; *Great Grimsby*.—Births 219; Deaths 145. Measles has been epidemic.

## 31. NOTTINGHAMSHIRE.

436; 1. WORKSOP; *Worksop*.—Births 72; Deaths 70. The number of deaths is considerably in excess of the average (48) of five corresponding quarters. Scarlatina was fatal in 13 cases.

438; 1. BASFORD; *Greasley*.—Births 205; Deaths 86. The deaths have increased during the last quarter owing to the prevalence of measles and typhus. Small-pox has prevailed to a considerable extent, but no deaths occurred from it.

440; 3. NOTTINGHAM; *St. Ann*.—Births 195; Deaths 147. Deaths 8 below the average. Small-pox has been very prevalent throughout the sub-district, though only 8 deaths occurred from it, of which 6 were cases where vaccination had been performed.

## VIII. NORTH WESTERN COUNTIES.

## 33. CHESHIRE.

452; 2. STOCKPORT; *Hyde*.—Births 147; Deaths 154. The deaths are above the average. Whooping-cough and measles have been very prevalent, and several deaths have been caused by scarlatina, &c.

452; 3. STOCKPORT; *Heaton Norris*.—Births 128; Deaths 119. Measles prevalent in the district, and fatal in 14 cases.

452; 4. STOCKPORT; *Stockport first*.—Births 215; Deaths 260. Deaths above the average. 28 from measles.

453; 4. MACCLESFIELD; *East Macclesfield*.—Births 72; Deaths 62. 10 deaths were registered in the quarter from small-pox.

459; 2. GREAT BOUGHTON; *Chester Castle*.—Births 198; Deaths 205. The average number of deaths for five corresponding quarters is 136. The deaths from scarlatina, which has been very prevalent, amount to 68. The number of deaths under five years of age, 116.

459; 3. GREAT BOUGHTON; *Chester Cathedral*.—Births 153; Deaths 185. The deaths are above the average. From scarlatina there were 44.

## 34. LANCASHIRE.

461; 2. LIVERPOOL; *Howard Street*.—Births 218; Deaths 319. The deaths are 53 above the average of corresponding quarters in the last four years, which may be accounted for by the prevalence of typhus, diarrhoea, bronchitis; also scarlatina, whooping-cough, and measles amongst children. The deaths from typhus 45, diarrhoea 18, scarlatina 18, measles 8.

461; 3. LIVERPOOL; *Dale-street*.—Births 243; Deaths 348. The increase of deaths in the past quarter may be attributed to the close weather in the latter portion of it. Measles was unusually prevalent, and caused a great number of deaths of young children. Scarlatina and whooping-cough have also been prevalent. Measles was fatal in 39 cases, scarlatina in 30, whooping-cough in 24.

461; 6. LIVERPOOL; *Mount Pleasant*.—Births 520; Deaths 880. There were 163 deaths from typhus, which occurred chiefly in the workhouse.

461; 7. LIVERPOOL; *Islington*.—Births 382; Deaths 409. There is an increase of deaths this quarter, although there is a considerable reduction in the population. The London and North-western Railway Company have taken down a church and about 160 dwelling houses during the year in my district. Measles, scarlatina, and diarrhoea have been very fatal in the quarter.

462; 6. WEST DERBY; *West Derby*.—Births 666; Deaths 391. The deaths are 62 more than the average of corresponding quarters in the last four years. There have been 20 deaths from diarrhoea, 51 from bronchitis, 12 from scarlatina, 12 from measles, 19 from typhus, 12 from whooping-cough, 1 from Asiatic cholera. The births are more by 146 than the average of four corresponding quarters. The increase both of births and deaths is owing to increase of the population of the sub-district.

468 ; 1. BOLTON ; *Farnworth*.—Births 140 ; Deaths 132. Deaths above the average. There were 28 from measles.

468 ; 3. BOLTON ; *Westhoughton*.—Births 45 ; Deaths 21. Fever has been exceedingly fatal in and about Dicconson Lane, Higher Toll Bar and Four Gates. Sanitary arrangements are deficient.

468 ; 11. BOLTON ; *Bolton Eastern*.—Births 200 ; Deaths 197. The deaths are above the average ; chiefly owing to measles, which was fatal in 46 cases.

468 ; 12. BOLTON ; *Bolton Western*.—Births 210 ; Deaths 155. The deaths are considerably above the average of corresponding quarters, owing principally to the prevalence of measles, which has been epidemic, and fatal in 41 cases.

469 ; 10. BURY ; *Pilkington*.—Births 80 ; Deaths 84. The deaths over the average. This is accounted for by the prevalence of measles amongst children.

470 ; 1. BARTON-UPON-IRWELL ; *Worsley*.—Births 135 ; Deaths 103. Fever, which caused 19 deaths, has raised the mortality ; recently it has shown some abatement.

472 ; 4. SALFORD ; *Regent Road*.—Births 349 ; Deaths 386. The deaths are 149 above the average of corresponding quarters in the last five years. 187 of the 386 deaths were those of children under five years of age. Deaths from bronchitis 51 ; from diarrhoea 27 ; from typhus 29 ; from scarlatina 10 ; from measles 24 ; from whooping-cough 27.

473 ; 2. MANCHESTER ; *Deansgate*.—Births 219 ; Deaths 253.—The mortality during the quarter has been excessive. In the same quarter of last year the deaths were 196, yet the population must have been diminished by the pulling down of several houses to make room for warehouses. Fever has been very prevalent ; many cases have been removed to the hospitals, and still the deaths in the sub-district from typhus and typhoid fever have been 38. [A Report by Mr. Leigh, the Registrar of Deansgate, on the Sanitary Condition of Manchester, will be found at page 31.]

473 ; 3. MANCHESTER ; *London Road*.—Births 276 ; Deaths 277. The deaths from nine principal causes are as follow ; viz.—

	Oct.	Nov.	Dec.	Quarter.
Bronchitis	16	23	23	62
Diarrhoea	14	3	4	21
Fever	10	8	6	24
Whooping-cough	9	11	7	27
Phthisis	6	5	5	16
Pneumonia	3	7	3	13
Measles	2	1	—	3
Scarlatina	1	—	3	4
Small-pox	—	—	1	1

473 ; 4. MANCHESTER ; *Market Street*.—Births 218 ; Deaths 514. The deaths in the workhouse and Royal Infirmary from typhus have been very numerous.

473 ; 8. MANCHESTER ; *Failsforth*.—Births 37 ; Deaths 48. The deaths are above the average of corresponding quarters in four or five previous years. Scarlatina and diarrhoea have been prevailing in the district. 15 deaths were from scarlatina.

475 ; 1. OLDHAM ; *Oldham-below-Town*.—Births 364 ; Deaths 364. Scarlatina still prevails ; it was fatal in 74 cases in the quarter.

475 ; 2. OLDHAM ; *Oldham-above-Town*.—Births 255 ; Deaths 295.—The deaths are considerably above the average of corresponding quarters in pre-

ceding years ; in 1864 they were 161 ; and in 1863, 167. There were 47 deaths from scarlatina.

475 ; 3. OLDHAM ; *Chadderton*.—Births 119 ; Deaths 87. The deaths are very much above the average, which I attribute to the prevalence of scarlatina alone, 25 deaths having been registered from that cause. The whole of the deaths from scarlatina, with one exception, have occurred in the township of Chadderton, 20 of them near Hollinwood, that portion of my district which adjoins the district of Oldham-below-Town.

475 ; 5. OLDHAM ; *Royton*.—Births 71 ; Deaths 59. This district is far from being in a healthy state at present. Indeed there is a great amount of sickness on all sides, mainly attributable to the remarkably mild state of the weather. Trade is much improved here since my last report, and the inhabitants are better clothed and fed. There was a slight stoppage of the cotton mills in October last, owing to the very unsettled state of the cotton market at that time ; but it was only temporary, and they are all on full time at present.

475 ; 6. OLDHAM ; *Crompton*.—Births 50 ; Deaths 36. The deaths do not exceed the average ; but there has been much sickness during the last quarter in the sub-district of Crompton, although the weather has been very mild.

476 ; 3. ROCHDALE ; *Castleton without*.—Births 90 ; Deaths 107. The deaths greatly exceed the average. Measles, which carried off 14 children, diarrhoea, whooping-cough, and fever have been very prevalent.

476 ; 4. ROCHDALE ; *Castleton within*.—Births 132 ; Deaths 121. The deaths exceed the average of five corresponding quarters by 54. The increase I attribute to the prevalence of fever, of which there have been 12 cases fatal, and measles 17 cases.

476 ; 9. ROCHDALE ; *Blatchinworth*.—Births 30 ; Deaths 29. Almost half of the deaths occurred from measles.

476 ; 10. ROCHDALE ; *Whitworth*.—Births 101 ; Deaths 71. The deaths rather above the average, measles having been prevalent in this part of the district.

477 ; 1. HASLINGDEN ; *Newchurch*.—Births 180 ; Deaths 150. The deaths are above the average of corresponding quarters. I have registered 11 deaths from measles, 7 from scarlatina.

478 ; 1. BURNLEY ; *Burnley*.—Births 326 ; Deaths 425. Scarlatina has been exceedingly fatal ; 174 deaths from it were recorded.

478 ; 2. BURNLEY ; *Padiham*.—Births 77 ; Deaths 114. Scarlatina proved fatal in 56 cases.

478 ; 3. BURNLEY ; *Colne*.—Births 195 ; Deaths 136. There were registered 37 deaths from scarlatina.

479 ; 2. CLITHEROE ; *Slaidburn*.—Births 12 ; Deaths 10. Scarlatina of a peculiarly malignant character is at present (as well as sub-acute affections of the respiratory organs) prevalent in this district.

480 ; 4. BLACKBURN ; *Blackburn*.—Births 638 ; Deaths 514.—The deaths are 38 above the average of four preceding December quarters. I have registered about 34 deaths from scarlatina.

481 ; 4. CHORLEY ; *Chorley*.—Births 151 ; Deaths 135. There is a considerable increase in the mortality, owing to the prevalence of scarlatina in the district, from which alone there have been 26 deaths. Small-pox has also been prevalent, but only 1 death occurred from it.

482; 2. PRESTON; *Preston*.—Births 828; Deaths 731. The deaths are 91 more than in the corresponding quarter of last year, and 121 more than the average for the last five corresponding quarters. The following diseases have been the most fatal:—Bronchitis 92 deaths, phthisis 73, diarrhœa (including 2 from choleraic diarrhœa) 57, scarlatina 58, pneumonia 30, small-pox 25, croup 20, typhoid fever 11, diphtheria 9. Fever (not specified) 7, whooping-cough 9. 397 children died at and under 5 years of age. The births are 51 more than in the corresponding quarter of last year, and 9 more than the average for the last five corresponding quarters. Small-pox has been very prevalent here during the last three months, and has caused more deaths than we have had from the same cause for five years. Scarlatina, though prevalent, has not been so fatal as in the same quarter of 1864, when there were 124 deaths from it. A young girl aged 14 years, a domestic servant from an adjacent village, died at the workhouse, December 11th, from bronchitis; she gave birth to an illegitimate child in the same place on November 21st, which survives its mother.

483; 3. FYLDE; *Poulton-le-Fylde*.—Births 109; Deaths 105. Deaths considerably over the average. Scarlatina has prevailed extensively (especially in Fleetwood), 19 deaths being recorded in the sub-district from that cause.

IX. YORKSHIRE.

35. WEST RIDING.

496; 1. SADDLEWORTH; *Delph*.—Births 74; Deaths 50. Fever has been and is now very prevalent in my district. I cannot but attribute it to the unseasonable weather.

497; 9. HUDDERSFIELD; *Huddersfield*.—Births 333; Deaths 268. The deaths are above the average. Typhus was returned in 31 cases.

498; 7. HALIFAX; *Sowerby*.—Births 126; Deaths 90. 9 deaths occurred from typhus, which has prevailed to a considerable extent this quarter.

499; 8. BRADFORD; *Thornton*.—Births 128; Deaths 96. The number of deaths is again considerably above the average, owing to the continued prevalence of scarlatina of a very malignant kind. Upwards of 20 deaths from it have taken place this quarter.

501; 1. LEEDS; *South-east Leeds*.—Births 343; Deaths 234. The deaths exceed the average of corresponding quarters of five previous years by 29. Typhus has been prevalent and fatal in this district.

501; 2. LEEDS; *North Leeds*.—Births 493; Deaths 517. The average number of deaths for the corresponding five quarters is 339. Fever has been very fatal, the deaths from it being 104; from bronchitis 69; from diarrhœa 37; phthisis 39; scarlatina 14; measles 12.

505; 2. BARNSELY; *Barnsley*.—Births 237; Deaths 245. The deaths exhibit an increase of 112 as compared with the average of corresponding quarters of three preceding years. There were 51 from scarlatina.

505; 3. BARNSELY; *Darfield*.—Births 131; Deaths 83. The deaths have been 31 above the average of corresponding quarters of four previous years, which may be partially attributed to the prevalence of scarlatina, fever, &c. Deaths from scarlatina 10; fever 5; typhus 3; malignant cholera 2.

507; 4. ECCLESALL BIERLOW; *Ecclesall Bierlow*.—Births 485; Deaths 278. The number of deaths

does not appear to be above the average; but no less than 50 of the 278 deaths have been caused by fever, chiefly scarlatina.

508; 3. SHEFFIELD; *Sheffield South*.—Births 179; Deaths 106. The sub-district is not at present in a healthy condition, infantile diseases being very prevalent. Sanitary measures are making but slow progress; and as the population of Sheffield is over 207,000, it would be an advantage if a medical officer of health were appointed, either in conjunction with, or independently of, the health committee of the corporation.

508; 4. SHEFFIELD; *Sheffield Park*.—Births 212; Deaths 131. The deaths from fever (19) are very numerous, much of it being of the typhoid character. Fever still continues to be very prevalent in the neighbourhood.

508; 5. SHEFFIELD; *Brightside*.—Births 447; Deaths 249. The births are 105, and the deaths 23, above the respective averages of the five previous corresponding quarters. From the table subjoined, it will be seen that fever has been prevalent, and there has been a great mortality from pneumonia, chiefly among children.

Births.			
Boys	217	Measles	4
Girls	230	Marasmus	6
	447	Pneumonia	30

Dysentery	1
Disease of Heart	3
Diphtheria	3
Dropsy	5
Whooping-cough	8

513; 2. SELBY; *Selby*.—Births 94; Deaths 50. Typhus has been prevalent amongst the Irish in Selby; but out of nearly 30 cases, only one death has occurred.

36. EAST RIDING.

515; 1. YORK; *Shelton*.—Births 14; Deaths 17. The deaths are greatly above the average. During the early part of the quarter, typhus again visited its old haunt at Haxby, and 5 cases proved fatal. Some little attention has been paid to sanitary matters by the local authorities of that place, but I fear the condition of the village is still far from being satisfactory. The remainder of the district is healthy.

37. NORTH RIDING.

525; 1. SCARBOROUGH; *Filey*.—Births 29; Deaths 25. The number of deaths in this sub-district is greater than usual, owing to the want of sanitary arrangements. Fever has been very prevalent, and the doctors state that unless measures are taken with regard to ash-heaps, &c. no improvement in the public health can be looked for. Typhoid fever is on the increase; in fact as many as 5 cases have been in one house, and during the last three months more than 50 cases have occurred in Filey, though few have ended fatally. The ash-heaps are in some parts

not five yards from the entrances to the houses; and the scavengers empty some of the places at noon, when the occupants have been obliged to leave their houses in consequence of the stench. Many complaints have been made, but without effect.

## X. NORTHERN COUNTIES.

### 38. DURHAM.

541*a*; 1. STOCKTON; *Yarm.*—Births 425; Deaths 222. The deaths were above the average in October and November. Typhus and typhoid fever prevailed in my sub-district, especially in the township of Linthorpe, entirely from want of sanitary arrangements. They caused 47 deaths.

546; 1. EASINGTON; *Easington.*—Births 294; Deaths 125. Deaths considerably below the average. We have had one case of cholera at Seaham Harbour, that of a man who came there from Sunderland, was taken ill, and died in a few hours.

548; 1. CHESTER-LE-STREET; *Chester-le-Street.*—Births 177; Deaths 87. There is a gradual increase of births and deaths, population in my district increasing very rapidly. New collieries are about to commence, and they are all working full time. Labour plentiful and remunerative; plenty of work for willing hands; the difficulty is to get good men.

### 39. NORTHUMBERLAND.

552; 1. NEWCASTLE-UPON-TYNE; *Westgate.*—Births 484; Deaths 303. The mortality is a little above the average of corresponding quarters in former years, chiefly owing to the prevalence of measles, diarrhœa, typhus, intermittent fever, and scarlatina, as the following numbers show:—measles 28, diarrhœa 26, typhus and intermittent fever 13, scarlatina 4.

552; 4. NEWCASTLE-ON-TYNE; *All Saints.*—Births 292; Deaths 231. The deaths are above the average. Typhus has been very prevalent during the last three months, yet only 16 fatal cases have been registered, because a number of the patients are removed to the fever hospital, which is situated in the parish of St. John. Measles caused 15 deaths.

552; 5. NEWCASTLE-UPON-TYNE; *Byker.*—Births 114; Deaths 123. This has been a heavy quarter in deaths, which in my small district are 25 more than I ever registered in any quarter since I was appointed Registrar, four years ago. 27 deaths were caused by typhus, which is now less prevalent.

### 40. CUMBERLAND.

570; 3. COCKERMOUTH; *Workington.*—Births 109; Deaths 78. Small-pox has been prevalent during the quarter, and has caused 12 deaths.

570; 4. COCKERMOUTH; *Maryport.*—Births 128; Deaths 80. The deaths are about the average. 12 were from small-pox, which is prevalent in part of the district.

571; 4. WHITEHAVEN; *Egremont.*—Births 149; Deaths 135. The deaths are above the average. About 38 were from small-pox; 15 from scarlatina. Many of those deaths have been on Cleator Moor. The whole of this place has been recently built on, and scarcely a street has been put in proper order. Sewerage works are now in progress, which may do good; but I think that overcrowding and want of proper accommodation are very injurious to the health of the inhabitants, many houses being built back to back, and not an inch of ground outside

belonging to them, while many of the families have very little furniture or any suitable provision for times of sickness.

## XI. MONMOUTHSHIRE AND WALES.

### 42. MONMOUTHSHIRE.

577; 4. MONMOUTH; *Trellick.*—Births 27; Deaths 30. Small-pox has raised the mortality above the average.

580; 3. NEWPORT; *St. Woollos.*—Births 70; Deaths 53. There were 8 deaths from small-pox.

### 43. SOUTH WALES.

582; 2. MERTHYR TYDFIL; *Merthyr Tydfil Lower.*—Births 251; Deaths 181. Deaths from scarlatina 23.

585*a*; 3. SWANSEA; *Swansea.*—Births 322; Deaths 192. 2 deaths were from yellow fever.

586; 2. LLANELLY; *Llanelly.*—Births 161; Deaths 122. 48 deaths from scarlatina have occurred this quarter, thereby raising the total mortality considerably above the average.

599; 3. BUILTH; *Builth.*—Births 20; Deaths 23. The deaths are 10 above the average number in the corresponding quarters of four years. This is I believe partly to be accounted for by the unhealthy state of the weather, partly by the bad sanitary condition of the town of Builth, in which 14 deaths out of the 23 occurred.

603; 3. PRESTEIGNE; *Kington.*—Births 45; Deaths 47. The deaths in this district are much above the average. Typhus and typhoid fever are still prevalent in some parts, particularly in the village of Pembridge, 4 fatal cases having occurred there and 2 in Lyonshall.

### 44. NORTH WALES.

621; 2. BANGOR; *Bangor.*—Births 99; Deaths 83. The deaths are 10 above the average, in consequence of the prevalence of scarlatina.

623; 2. ANGLESEY; *Bryngwran.*—Births 37; Deaths 36. The deaths are above the average. Typhus, scarlatina, low fever, and small-pox have been prevalent.

623; 6. ANGLESEY; *Holyhead.*—Births 78; Deaths 73. The increase in the deaths is owing to small-pox and scarlatina. Scarlatina was fatal in 17 cases; small-pox in 9.

### REPORT on the Sanitary Condition of MANCHESTER, by JOHN LEIGH, Esq., Registrar of the Deansgate Sub-district.

"During the quarter ending 31st December 1863 there were 34 deaths from scarlatina, and, including whooping-cough amongst the infectious diseases, 51 deaths from this class altogether.

"In the next quarter ending 31st March 1864, 21 deaths from scarlatina and 49 from all infectious diseases.

"In the quarter ending 30th June 1864, 18 deaths from scarlatina and 31 from all infectious diseases.

"In the quarter ending 30th September 1864, 15 deaths from scarlatina, 13 from measles, and 8 from fever; 41 from all diseases of an infectious character, and 61 from diarrhœa.

"In the last quarter of 1864 there were 10 deaths from scarlatina, 10 from measles, 13 from fever, 4 from small-pox; 41 from all infectious diseases.

"In the first quarter of 1865 scarlatina had vanished from the district; there was not a single death from this disease, and only 3 from measles; but there were 10 deaths from small-pox and 11 from typhus.

"In the next quarter ending 30th June there were 7 deaths from fever, 7 from measles, 3 from small-pox, only

2 from scarlatina, and 1 from whooping-cough; 21 deaths from all infectious diseases. There were 17 deaths from diarrhoea.

"In the quarter ending 30th September there were 15 deaths from fever, 25 from all infectious diseases, and 71 from diarrhoea.

"These numbers represent the deaths occurring within the district. Many cases were taken to the hospitals, and either terminated in recovery or swelled the mortality of other districts. The figures suffice, however, to show how zymotic diseases replace each other. Beginning with scarlatina in the December quarter of 1863, we find it declining through the three succeeding quarters under a gradual rise of measles, typhus, and small-pox; measles next, to a great extent, giving way to fever and small-pox. The latter is now scarcely found in the district, and fever is in the ascendant. There can be no doubt that scarlatina, measles, small-pox, and whooping-cough, whatever or whenever their remote origin may have been, are at this day communicable and perhaps in all cases communicated by infection. I have no knowledge of ever having personally met with a case of any of these diseases of spontaneous origin. Of true typhus probably the same may be said; whilst the united testimony of observers of the very erratic course of cholera points to the same conclusion respecting it. I very carefully traced nearly every case of cholera during the last two invasions of this disease in Manchester, and invariably I found there had been direct communication with infected persons or an infected atmosphere. I entertain no more doubt of the infectious nature of cholera than of that of small-pox or scarlatina. Its course can be accounted for in no other way. Under the threatening prospect of a fresh invasion it is best to look the disease fairly in the face, and not, under the fear of being considered alarmists, to ignore its nature, and neglect the means of breaking the force of the attack.

"It may perhaps be granted, that the noisome pent-up atmosphere of courts and alleys, of overcrowded and unventilated rooms, the emanations of churchyards, the effluvia of unsluiced sewers and drains, the decomposing offal of slaughter-houses, and the disgusting exhalations from manufactories of animal matters, do not generate small-pox, measles, or scarlatina.

"Cholera is probably a disease of our time, originating in the filth and dirty habits of the devotees who throng the banks of the Jumna and the Ganges, assisted by the miasms and putrescence of those polluted rivers. It is doubtful too whether in our time typhus does not absolutely originate in the ill conditions of our crowded towns. Be this as it may, nothing is more certain than that the ordinary unfavourable conditions of large towns, with their festering grave-yards, decomposing offal, noisome exhalations of tallow-chandlery, and other manufactories of animal matters, stenches of sewers and drains, and stagnant atmosphere of courts and alleys, are the predisposing causes of diseases, especially infectious diseases. If they do not actually produce disease they so reduce the tone and strength of the population, so vitiate their blood and exalt their susceptibility of deleterious influences, that a constant tendency exists to take on diseased action, whether in the form of typhus, scarlatina, small-pox, or cholera. A state of chronic disorganization is always attracting the flying bands of the enemy.

"It is not a question of food and wages; the day-labourer in the country who earns his ten or twelve shillings a week, and tastes animal food but once in that week, is ruddy, strong, and healthy, compared with the highly-paid and well-fed artisan who works in a crowd of fellow-workmen and sleeps in the narrow street or confined court where his house stands, and whose cadaverous looks tell the tale of his surroundings.

"No doubt the artisan is exposed to temptations and has facilities of indulgence which do not fall to the countryman; but the pale skins of town children, their soft and flabby muscles, and protuberant abdomens, mark them out strongly from their rustic compeers.

"As a rule, a child in the country gets its teeth easily; in the town it perishes in too many instances of convulsions during the process of dentition. During the last quarter 30 children have died from convulsions in this district alone, and 85 during the year. Poison in the air, laudanum in the food, the wonder is, not that so many die, but that so many live.

"No town in England is better and more abundantly supplied with good and pure water than Manchester. It comes from the mountains of sandy grit that separate Lancashire from Yorkshire. Soft, yet sparkling and pure, it is equally adapted for drinking, for culinary or washing purposes. The streets of Manchester are admirably paved and sewered,

and are kept constantly clean by an organised body of scavengers. There are no pools of stagnant water, no collections of filth allowed to lie and rot in the streets. To the casual observer only the atmosphere is dark and foul. What is it then that makes Manchester so unhealthy a town? Why should its artisan be ever pale and sallow and unhealthy? He is better fed and clothed than his brother in the country. His drink is pure as at the fountain. The children have not learned intemperate habits, and yet are as sickly as their parents. I live in one of those fine wide streets still left in Manchester for private residences. My house is large; the rooms spacious; there is a large piece of open ground connected with the house, the windows are regularly and frequently opened, and the house well ventilated by large fires kept up for the purpose. Yet I am obliged to have a house in the country for my family. In the town my children grow pale, their appetites fail, they become thin and listless, and ready to be the prey of active disease, and yet all circumstances, save atmosphere alone, are the same as those of the country. Close to my town house, on the west side, is a large grave-yard, in which interments are even yet made daily. On one side of the street, separated by a small interval, is a large tallow-melting work recently established; on the other side an ancient and time-honoured tallow-chandlery, with its vested right of poisoning the neighbours; at the top of the street are half a dozen slaughter-houses, in two of which some three hundred pigs are killed and dressed weekly, the sewers getting the benefit of the effete matters. Add to the noxious products which load the atmosphere from these sources, the black outpourings from innumerable chimneys, and a tolerable conception of the sanitary state of the neighbourhood will be obtained.

"The unhealthiness of Manchester is due to its vitiated atmosphere; we have had an unusually dry season, and an extraordinary amount of sickness, with excessive mortality. Nothing but the constant rain we have in ordinary years makes a residence within its bounds tolerable. The air is well washed often, and we survive. No plant will live in Manchester without constant washing; the leaves become coated with soot, the stomata choked and closed; and respiration ceases after a few hours. And that which destroys the life of a plant is breathed by the whole inhabitants of Manchester. This is the life-giving fluid on which they are to live and work. Let any one examine the lungs after death of a person who has been long resident in Manchester, and in the bronchial glands he will find a fluid substance, inhaled soot, as black and thick as ink. Besides the black carbonaceous particles, there are salts of ammonia, and other irritating matters which are carried with the inhaled air into the finer bronchial tubes and produce a constant irritation, which undoubtedly has much to do with the large amount of phthisical and bronchial disease ever present in this great town.

"Such nuisances are within the control of the authorities. Why should not the smoke be burned? Why should not the slaughter-houses and the noxious manufactories be removed to one outskirts of the town, where already many of them are situated? To a large extent they would neutralize the bad effects of each other. The chlorine and muriatic acid and sulphurous acid so largely developed in our vast chemical manufactures would destroy the animal and vegetable matters that now pollute the centre of the town; and at all events there would be ample space for diffusion of the true gases, and the distribution by the winds of the now concentrated vapours.

"We have fever amongst us, and cholera at our doors. We know how fatally these are promoted and extended by the evils which we see and recognize, and yet fear to touch. Unhappily the value of human life is outweighed by other considerations.

"The evils of a polluted city atmosphere exist in concentrated force in the courts, alleys, and confined overcrowded rooms in which so many of our labouring population live; and these are more difficult to deal with. The air is stagnant, and as the courts and alleys are closed at one end (blind alleys) there is no possibility of ventilation unless artificial openings be made. But a foul atmosphere is not disagreeable to a large class of working people, who enter it with indifference; and it is almost impossible to get them to open their windows. Though they are amply supplied with water, extreme uncleanness of person, dress, and home is also matter for much regret. For this no remedy exists but education; and the clergy of all denominations hold a power which they might exercise most beneficially in the inculcation of sanitary lessons. At the present time benevolence can hardly find a nobler field.

"Dirt and squalor are the enemies of religion as much as of health."

[The following Index furnishes a reference to the *Number* of each DISTRICT in the Tables of Marriages, Births, and Deaths contained in this Return. Any District in the Registrars' Notes may be found in the same manner. In forming the alphabetical arrangement, the principle adopted has been to place compound names in the order in which they are pronounced.]
